1943, January 1–February 13. Stalemate in Tunisia. Allied expeditionary forces, under Anderson's tactical command, were spread thin along the Tunisian Dorsal and Eastern Dorsal ranges from Cape Serrat on the Mediterranean to Gafsa in the south. The British First Army, with a provisional French corps and some U.S. elements, held the line from the north to Fondouk in central Tunisia; the bulk of Fredendall's U.S. II Corps stretched to the south. Arnim's Fifth Panzer Army held northeastern Tunisia; Rommel's Afrika Korps, completing a masterly withdrawal from Egypt, held an old French fortified zone at Mareth, with its left flank on the Gulf of Gabes and its right resting on the almost impassable salt marshes of the Chott Djerid; there they were reequipped. Montgomery slowly began concentrating in front of Mareth. There was no ground communication between Anderson and Montgomery. Arnim, in a series of aggressive blows,

kept Anderson off balance, while the Luftwaffe dominated the air.

1943, February 14–22. Battle of Kasserine Pass. Rommel, fearful lest he be caught by an Allied drive in his rear while Montgomery assaulted his Mareth position from the south, launched a 2-pronged surprise attack against the U.S. II Corps sector. His armor thrust through Faid, Sidi-bou Zid, and Sbeitla, driving for Kasserine Pass, while another armored thrust rolled through Gafsa on the south to Feriana (February 17). Elements of the U.S. 1st Armored Division and attached units, scattered through the sector in small packets, were rolled up; a piecemeal counterattack was ambushed. Staged in the best blitzkrieg style, with the Luftwaffe closely supporting by dive bombings and strafings, the drive rolled on. Eisenhower, his vital supply base at Tebessa threatened, rushed reinforcements, while both U.S. and British troops on the front gained their second wind. Rommel's Panzers crashed through the Kasserine Pass (February 18) and fanned northward. Against increasing resistance, his spearheads reached into the Western Dorsal range at Djebel El Hanra, Thala, and Sbiba (February 20–22) before momentum was lost. An expected supporting attack by Arnim in the north failed to materialize. Rommel, unmolested, then retired to his Mareth position as hastily as he had come.

COMMENT. *The attack had accomplished its primary purpose: to wreck Allied plans to divide the German forces by a thrust eastward to the Gulf of Gabes. Had Arnim cooperated, serious damage would have been done, but Hitler had insisted on a divided command in Tunisia; not until February 23 did he place Rommel in overall command. The Allied reverse was what might have been expected from green troops faced by skillful and daring veterans with air superiority. It was compounded by a poorly organized and coordinated American air-support system, and by Anderson's faulty terrain appreciation and his patchwork dispositions—a cordon of units divided both in nationality and in tactical formation, with consequent improvisation of command chain. As it was, the American troops put up a remarkably tenacious fight. Eisenhower must share the blame; permitting himself to become too much involved in the Franco-Algerian political turmoil, he had neglected command supervision. His first visit to the front came but 24 hours before the German assault occurred. A shake-up of command followed. All Allied ground forces in Tunisia were combined (February 20) in the 18th Army Group, Alexander commanding, and the organizations were regrouped by nationality. Patton shortly succeeded Fredendall in command of U.S. II Corps (March 6). Upon advice from the RAF's Air Marshal Tedder, and from USAAF officers, the Americans also adopted the British system of air support, which permitted more flexible and more effective employment of available air strength.*

1943, February 26. Arnim's Attack. Belatedly, the Fifth Panzer Army assaulted British First Army's positions in northern Tunisia and gained some ground. However, stubborn resistance cost Arnim much armor, and a British counterattack (March 28) restored the line.

1943, March 6. Rommel Repulsed. Testing Montgomery's positions in front of Mareth, Rommel was decisively repulsed at **Médenine** with much loss in matériel. Still ill, he left Africa. Arnim assumed over-all command in Tunisia; Italian General **Giovanni Messe** took over the Mareth front and General **Gustav von Vaerst** the Fifth Panzer Army in the north.

1943, March 20–26. Battle of Mareth. Montgomery, with greatly superior forces, assaulted the Italo-German position, the XXX Corps making the main effort on his right. Despite heavy bombardment, the 15th Panzer Division counterattacked in the moonlight, checking the British. Montgomery, who had sent the New Zealand Corps on a wide turning movement against the Axis right, now reinforced it with the X Corps. Messe, avoiding encirclement, withdrew to El Hamma. The Allies now held the initiative.

1943, April 1–22. Axis Withdrawal. Patton's II Corps threatened Messe's right; Montgomery lunged north (April 6). When they linked, Messe had escaped and was moving swiftly north. The British IX Corps (First Army) moved east through Fondouk, but Messe was going too fast. This second pincers movement failed

also when it closed with Montgomery's pursuing Eighth Army at Kairouan. With Messe's arrival Arnim held a defensive line running generally south and then east from Cape Serrat on the Mediterranean to Enfidaville.

1943, April 22–May 3. Beginning the Final Offensive. Alexander planned a power thrust by First Army with Eighth on the right, and U.S. II Corps on the left, shifted north for this offensive. (Major General **Omar N. Bradley** had relieved Patton to command U.S. forces in the coming Sicilian operation.) Major General **Louis-Marie Koeltz's** French XIX Corps linked the First and Eighth armies. Vaerst's Fifth Panzer Army held the right, then came the Afrika Korps, then Messe's Italian First Army on the left of the Axis front. The Germans had been reinforced, but the Allies had air superiority. German supplies were desperately short, due largely to "ultra" radio eavesdropping that kept the Allies informed of the sailing of German supply ships, most of which were then sunk. An emergency German air supply effort did not help much, and most of the transports were shot down by Allied fighters. The First and Eighth armies inched forward against determined resistance; the II Corps, probing against the most difficult terrain on the front, moved more rapidly, driving the Germans from Jefna (May 1) and taking Mateur (May 3.)

1943, May 3–13. Battle of Tunisia. Preceded by heavy artillery and air preparation, the Allies penetrated the Axis perimeter, the II Corps north and south of Lake Bizerte, the First Army east from Medjez El Bab. With all reserves committed, and lacking air support (the Luftwaffe was withdrawing to Sicily), Arnim was unable to stem the tide. The U.S. 34th Division entered **Bizerte** (May 7); the 1st Armored Division rolled through Ferryville, cutting the German communications and linking (May 9) with the British 7th Armored Division, which had already entered **Tunis** (May 7), and turned north. To the south, the French corps and the Eighth Army surrounded the Italian First Army, and British armor cut off the Cape Bon Peninsula (May 11). Thus dislocated and canalized by Allied thrusts, Axis troops began surrendering in droves, Bradley garnering some 40,000 prisoners in his zone. In all, some 275,000 prisoners were taken, including the top commanders. The Italian Navy made no attempt at evacuation. The Axis hold on North Africa was ended.

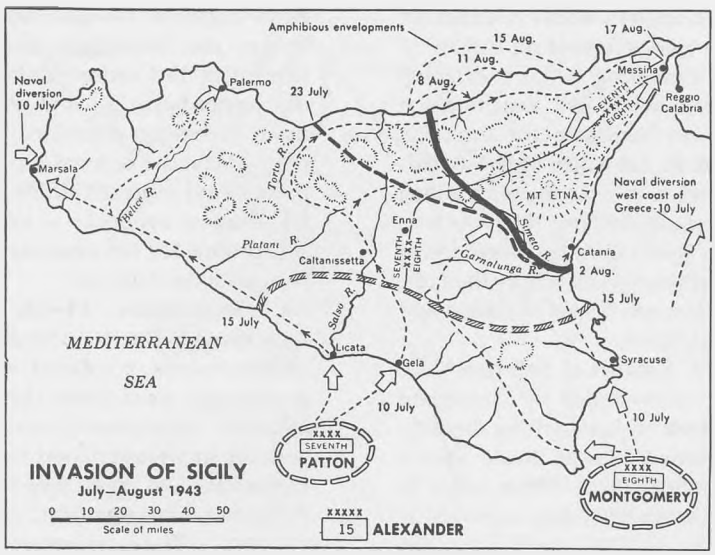
COMMENT. *Alexander's power punch was well planned and executed. The U.S. II Corps, still stinging from its reverse at Kasserine, aggressively modified its planned secondary role to a major one. The Axis forces put up stout resistance until the last in a situation which they knew could have but one end. The North African victory was prototype for future Allied joint operations. Strategically, it provided a springboard for further Mediterranean operations, including invaluable sites for air bases. Axis losses in casualties and prisoners in the North African campaigns amounted to an estimated 620,000 soldiers, one-third of them Germans. British losses in North Africa—from the beginning of the war—amounted to 220,000 in all. From November 1942, to May 1943, French losses were about 20,000, and the Americans suffered some 18,500 casualties.*

Sicily

1943, June 11. Capture of Pantelleria. The Italian garrison of this rocky island surrendered after a week of incessant bombardment by the Northwest African Air Force, as an Allied landing force approached.

1943, July 9–10. Assault on Sicily. Following a month-long bombardment of Axis air bases in Sicily, Sardinia, and Italy, an amphibious assault by Montgomery's British Eighth Army and Patton's U.S. Seventh Army (elements of Alexander's 15th Army Group) gained a toehold on Sicily's southeast coast. Effective support was given by naval gunfire. The Italians, not expecting an attack in stormy weather, were caught by surprise.

1943, July 11–12. Axis Counterattacks. General **Alfred Guzzoni**'s Italian Sixth Army struck back. German divisions, attacking American troops near Gela and Licata, were particularly effective, but were repulsed after nearly driving to the sea. Allied airborne land-



ings were disrupted by bad weather and mistaken Allied antiaircraft fire.

1943, July 15–23. Clearing of Western Sicily. Though determined German resistance stopped Montgomery south of Catania, Patton's army swept through western Sicily, then turned east to assist the British.

1943, July 23–August 17. Advance to Messina. Despite spirited German resistance (now actually directed by one-armed German Colonel General **Hans Hube,** veteran of the Russian front), the Allies pressed steadily forward, aided by several small amphibious operations on the north coast east of San Stefano. The Italians began a mass exodus (August 3–16), followed by a more orderly German withdrawal (August 11–17), which succeeded in evacuating to the mainland over 100,000 men, 9,800 vehicles, and 50 tanks before the Allies occupied Messina (August 17).

COMMENT. *American casualties were 7,319; the British lost 9,353; Axis losses were over 164,000, including some 32,000 Germans. Great quantities of weapons and equipment were captured. Allied operations had been skillfully conducted. German resistance had been professional and tenacious, but the Italians showed little desire to fight. The Allies landed some 160,000 men, who had been transported in 3,000 vessels. Total Axis strength had been about 350,000, of which perhaps one-third were German. The Allies were aided by a great preponderance of air power, 3,700 planes as opposed to 1,600. With the capture of Sicily, the Mediterranean was again opened as an Allied sea route.*

ITALY

1943, July 24. Overthrow of Mussolini. The war-weary Italian nation toppled Mussolini from power during the Sicilian operation. His successor, Marshal Badoglio, though officially declaring intention to continue hostilities, began secret negotiations with the Allies through agents in Lisbon. Hitler, unwitting but suspicious, prepared to control and disarm the Italians, and began movement of German reinforcements into north Italy to protect the Alpine communications. Kesselring, German commander in southern Italy, correctly estimated that the Allies planned an early invasion, and that Salerno was a likely landing site.

1943, September 3. Armistice with Italy. This was signed secretly, to be effective September 8.

1943, September 3. Eighth Army Assault on Calabria. British troops landed on the toe of the Italian boot. Kesselring initiated delaying action in the south while still watching the Salerno area. He was unaware of the armistice.

1943, September 8. Publication of the Armistice. This was timed to coincide with Allied landings at Salerno. At the same time, the Italian fleet fled from Spezia to Allied protection at Malta, severely harassed on its way by the Luftwaffe. The alert Germans began to disarm and imprison all Italian forces.

1943, September 9. Assault at Salerno.* The U.S. Fifth Army, commanded by Lieutenant General **Mark Clark** and comprising the British X and American VI Corps, made assault landings in the Gulf of Salerno before dawn, to be met by alert German defenders, deployed in mobile defense. The British landed north of the Sele River (bisecting the crescent-shaped gulf shoreline), Americans to the south. Due to effective defense, and despite excellent naval gunfire support, by nightfall the Allies only held 4 narrow, unconnected beachheads. Kesselring began moving all available reserves to the Salerno area. To the south, 130 miles away, Montgomery's Eighth Army was slowly consolidating its hold of the Calabrian peninsula; a British division simultaneously landed to seize Taranto.

1943, September 10–14. Struggle for the Beachhead. Though both British and Americans were able to claw their way forward somewhat in their sectors, they still found it impossible to join their beachheads solidly at the Sele. German artillery, with perfect observation from the hills ringing the beaches, was particularly effective. Kesselring, having gathered most of 6 divisions, launched a violent counterattack against the Allied center (September 12). A last-ditch defense by American artillery units, supported by naval gunfire, prevented a breakthrough to the beaches (September 13). The Allied situation was desperate; sufficient reinforcements could not be put ashore to stop the Germans; 3 battalions of the 82nd Airborne Division were parachuted to bolster the crumbling beachhead. All the strength of the Northwest African Air Force and the carrier-based air and all the guns of the naval expedition combined to give close support. Alexander ordered Montgomery (still 50 miles away) to accelerate his advance, but skillful delaying action by a lone German battle group impeded his cautious advance through mountainous country.

1943, September 15–18. Securing the Beachhead. The hasty landing of more Allied reinforcements, combined with superb naval gunfire and air support, checked the German offensive. Montgomery's patrols made contact with the southeastern portion of the beachhead (September 16). Kesselring thereupon began a deliberate disengagement, retiring northward.

COMMENT. *Allied losses exceeded 15,000 men; German casualties were about 8,000. The outstanding feature of the battle had been the foresight, skill, and initiative of Kesselring, and the efficiency of his troops.*

1943, September 18–October 8. Consolidation of Southern Italy. Both Fifth and Eighth armies pressed on. West of the Apennines, the Fifth seized Naples (October 2) and pushed on, to be checked (October 8) by the swollen Volturno River, with all bridges destroyed. To the east, the Eighth Army took Foggia and its great air base (September 27), advancing to Termoli on the Adriatic, captured after a stiff fight (October 3). French troops, assisted by local Resistance elements, seized Corsica (September 11–October 4).

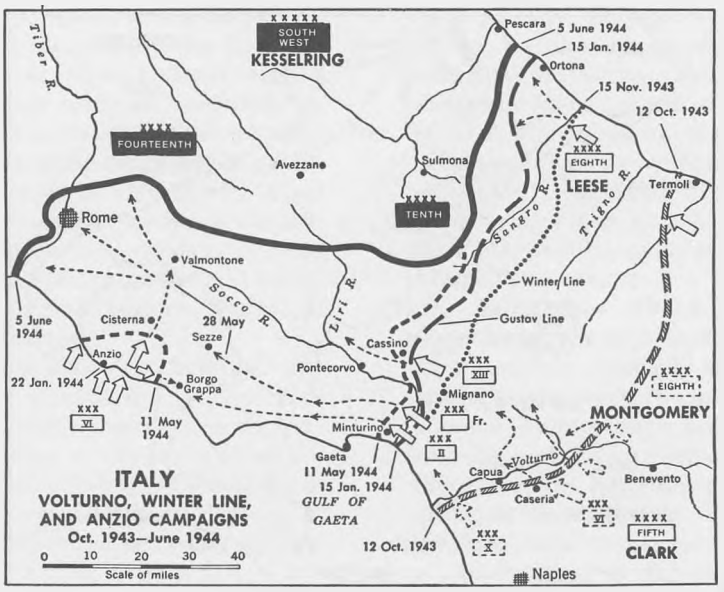
1943, October 12–November 14. Volturno River Campaign. Fifth Army, assaulting across the Volturno with both corps, made foot-by-foot progress over abominable trails in mountainous country drenched by the Italian autumn rains. The Eighth Army, having regrouped, also started north (October 22), forcing the Trigno River. Kesselring had selected the line Garigliano River-Sangro River to bar further Allied advance; his skillful, stubborn delaying actions granted him time to consolidate the position. The Allied armies, exhausted, found themselves facing ever-stiffening opposi-

* Operation "Avalanche."

tion. On November 15, Alexander halted to rest and regroup.

1943, November 20–December 31. "Winter Line" Campaign. Alexander's 15th Army Group resumed its advance on Rome. Kesselring by this time had established a formidable defensive zone (called the "Winter Line," or Gustav Line) 10 miles deep, running from the mouth of the swift-running Garigliano River on the Gulf of Gaeta, along its narrow tributary, the Rapido, then over the spine to the Adriatic north of the Sangro River. This zone was held by the Tenth Army (**Heinrich von Vietinghoff**). On the Mediterranean side the hill masses crowded down on the Liri Valley entrance, backstopped by Monte Cassino with the great Benedictine monastery frowning above the roaring Rapido. Into this zone the Fifth Army attacked. Some progress was made, despite determined resistance, atrociously difficult terrain, and constant rain or snow, but the year ended in blizzard-bound stalemate, with the attackers still 5 miles southeast of the Rapido. The German defense was assisted by the fact that Fifth and Eighth armies alternated in their assaults, thus enabling the defenders to shift forces in opposition.

1943, December. Allied Reorganization. Both Eisenhower and Montgomery left for the coming offensive in Western Europe. British General Sir Henry M. ("Jumbo") Wilson assumed supreme command in the Mediterranean Theater, and General Sir **Oliver Leese** took command of the Eighth Army. Some veteran divisions were drawn off for the European invasion. The VI Corps, too, was out, regroup-



ing for another amphibious operation, and new troops—including Indian, French, Italian, and New Zealand forces—were moving into the now polyglot 15th Army Group.

Aegean

1943, September 12–November 16. Operations in the Dodecanese. British landings on **Kos, Samos,** and **Leros** (September 12) provoked a prompt German reaction. An airborne assault retook Kos (October 3–4); Samos was then evacuated. Leros was taken by a combined airborne-amphibious assault (November 12–16). British resources were not sufficient to continue operations in the Aegean without interfering with operations elsewhere approved by the Combined Chiefs of Staff.

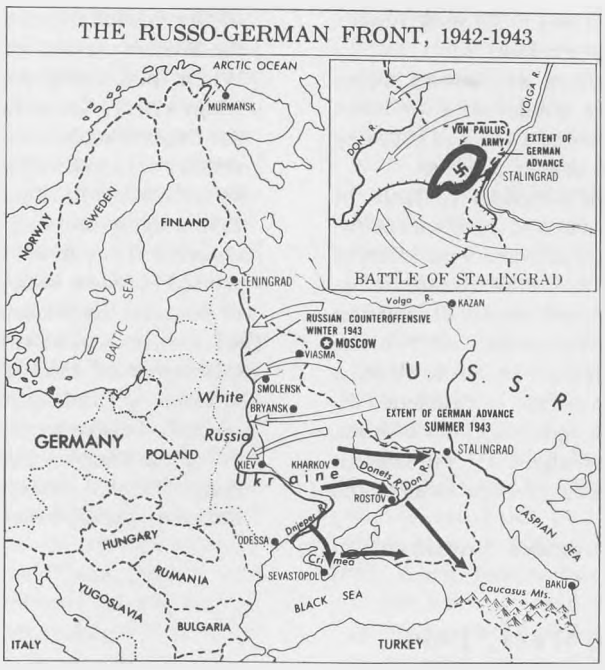
The Eastern Front, 1943

1943, January–February. Soviet Pressure. All German forces in southern Russia were in jeopardy. East of Kharkov, the Hungarian and Italian satellite armies were disintegrating; the Sixth Army at Stalingrad was in death agony; in the Don Valley in front of Rostov, Soviet assaults were threatening to cut off Army Group A's thin-spread First Panzer Army, now in retirement from the drive into the Caucasus oil fields.

1943, February 2. The End at Stalingrad. Paulus' Sixth Army, food and ammunition exhausted, surrendered to the relentless pressure of Rokossovski's Don Front (army group) after a last-ditch fight. Hitler's obstinacy had cost him in all 300,000 men. Paulus and 93,000 survivors surrendered. The First Panzer Army reached the Don at Rostov (February 1) to join Manstein's Army Group Don. The remainder of Kleist's Army Group A—Seventeenth Army—established a defensive bridgehead between the Sea of Azov and the Black Sea at Novorossisk.

1943, February 2–20. Soviet Drive across the Donets. Russian armor flooded over Kharkov, approaching the Dnieper bend, while partisans harassed the German rear area.

1943, February 18–March 20. Manstein's Counteroffensive. Manstein, skillfully employing reserves and shifting units, slowly checked, then threw back the Soviets, recaptur-



ing **Kharkov** (March 14) and restoring the line. Farther north, the line swayed back and forth in a succession of attacks and counterattacks. On the southern flank, Kleist's Army Group A maintained its bridgehead. The spring thaws then prohibited further mass movements by either side.

COMMENT. *The great Soviet winter offensive was a body blow to Axis power. The Soviets regained most of the territory lost in 1942. German losses are estimated at more than one million. The Soviets claimed capture or destruction of 5,000 aircraft, 9,000 tanks, 20,000 guns, and thousands of motor vehicles, railway cars, and locomotives. Russian losses were at least as great. Hitler's faulty strategy and almost complete incomprehension of logistical factors were his undoing. Large-scale guerrilla activity, engendered by SS atrocities in occupied terrain, greatly assisted Soviet leaders, who themselves had improved in military acumen. The most outstanding military performance had been Manstein's near miracle in halting the Soviet drive, despite odds of 7–1, then, amazingly, counterattacking successfully. This was one of the great military achievements of the war.*

1943, March–June. Recuperation and Reinforcement. German strength could no longer support another major offensive, as even Hitler realized. Soviet strength was now at least 4 times greater. By this time logistical aid furnished by the U.S. to the U.S.S.R. had mounted to 3,000-odd planes, 2,400 tanks, and 80,000 trucks.

1943, July 5–16. Battle of Kursk. Manstein's plan to strike a limited assault against the salient west of Kursk in combination with Kluge's Army Group Center was so long delayed by Hitler that when he finally launched it a Soviet counteroffensive checked it on the ground, while Soviet air power smothered Luftwaffe support. German losses were 70,000 killed or wounded, 3,000 tanks, 1,000 guns, 5,000 motor vehicles, and 1,400 planes. Russian losses in this largest of all tank battles were probably slightly less. This battle marked the end of German mass efforts in the east. Alarmed now by the Anglo-American Sicilian invasion (see p. 1198), Hitler broke off the move against Kursk and began transferring a

number of Panzer divisions to the west, further weakening his force in the east.

1943, July 12–November 26. Soviet Summer Offensive. From Smolensk to the Black Sea, the Russians delivered a series of battering blows, featuring great masses of armor.

1943, August 2. Hitler's Orders to Hold in the East. Partly in reaction to the Soviet offensive, and partly because of fears for the safety of Ploesti created by the American air raid (see p. 1196), Hitler now ordered Manstein, who was conducting a masterly mobile defense, to freeze the defense of the Kharkov sector in place. A Soviet breakthrough (August 3) threatened disaster, and Manstein ignored Hitler's order, abandoning Kharkov (August 23), but kept his lines intact by skillful counterattacks as he fell back to the Dnieper.

1943, September–November. Continuation of the Soviet Offensive. Disregarding losses, the Soviets pressed ahead all along the front. When they finally paused, they had pressed Kluge's Army Group Center back to the edge of the Pripet Marshes, had recaptured Kiev (November 6), and Smolensk (September 25), had driven a bridgehead across the Dnieper in Manstein's sector, and had cut off the German Seventeenth Army in the Crimea, since Hitler had refused to follow Manstein's recommendations to evacuate the peninsula.

1943, December. Initiation of Soviet Winter Offensive of 1943–1944. Taking advantage of frozen ground, the Soviets launched a new winter offensive in the Pripet Marsh area and along the Dnieper. Although Manstein's Germans inflicted heavy casualties, they were forced to give up more ground.

The War in the West, 1944

Strategy and Policy

The year opened with the Axis on the defensive. Hitler's Soviet gamble was lost, the eastern front crumbling. Italy was eliminated, North Africa cleared, and the Mediterranean sea lanes opened. In the United Kingdom, American strength was accumulating in astounding abundance. On the other side of the ledger, however, skillful German defense had halted the Allied advance midway up the Italian boot. The U-boats still menaced the Atlantic, Arctic, and Mediterranean sea lanes. Behind *Festung Europa's* barrier, the embattled German economy was producing war matériel at ever-increasing rates, despite the ravages of Allied bombers. The war was still far from a decision.

The strategic situation in Western and Northern Europe was plain to both Allied and Axis leaders, although never quite understood by their respective peoples. The Allies, from their bridgehead in the British Isles, held the priceless advantage of strategic interior lines. They were free, in principle, to attack Germany at any point in the long arc from Norway's North Cape to Brittany's Cape Finisterre. That they would invade was a foregone conclusion; there was no way to disguise the immense concentration of men and matériel. But where and when and how? This was the situation faced by Hitler, and this was the situation which—thanks to a deceptive cover plan whose details have never been fully revealed—the Allies maintained successfully until they were so firmly established in France that counterattack was futile.

1944, June–December. The V-bomb Threat to England. Soon after the invasion of Normandy, the first V-1 flying bomb struck England (June 13). German scientists had perfected this, the first of Hitler's "secret weapons," despite RAF attacks on the development and test site of Peenemunde (see p. 1195). Terror attacks by these weapons on

London severely shook English morale, despite the fact that about half the V-1s were shot down by antiaircraft or fighter defenses. The terror became more serious when the Germans introduced the V-2, the first effective long-range rocket missile (September 8). Because of their speed, these rockets could not be intercepted. The intensity of the attacks, however, was soon drastically reduced by the rapidity of the Allied ground advance along the French and Belgian coasts (see p. 1212). The Germans continued to fire V-2s against London from launching sites in Holland, though intensive Allied air bombardment prevented them from ever mounting a massive assault on England.

1944, July 20. Attempted Assassination of Hitler. A German Army plan to overthrow the Nazi regime failed when Hitler survived the explosion of a bomb in his headquarters. A ruthless purge of army officers ensued, and Hitler took absolute personal control over all military affairs. Rommel, a key figure in the plot, was forced to commit suicide (October 14).

1944, September 12–16. Octagon (Second Quebec) Conference. With Germany finally nearing collapse, principal attention was given to the war against Japan at this meeting of Roosevelt, Churchill, and the military Combined Chiefs of Staff. Despite Churchill's protests, America's increasing preponderance of military strength forced him to accede to American strategic concepts of concentrating all available strength directly against Germany, without consideration of possible "sideshows" in southern Europe, which Churchill felt would put the western Allies in a more favorable bargaining position with the Soviet Union at the time of a peace settlement. Because of such disagreements as to relative importance of political and basic military objectives, questions of postwar territorial settlements were postponed.

Battle of the Atlantic

1944, January–June. Foiling the U-Boats. Protection of the vast quantities of American men and materiel pouring across the seas, both to the United Kingdom and to the Mediterranean basin, became of paramount importance as the time for the cross-Channel invasion neared. German attempts to provide floating bases for the U-boats were scotched: a U.S. Navy hunter-killer group extirpated (February-March) "milch cow" submarines spotted in the Cape Verde Islands. Other groups hunted the elusive craft in both North and South Atlantic areas. The "schnorkel"—a tube providing air for diesel engines while submerged—assisted the latest German submarines to remain under water for long periods, but improved methods of detection prevailed. By the end of February, more than 1 million American troops had been convoyed to the United Kingdom, and by May the logistical lift had reached the colossal amount of 1.9 million tons per month.

1944, April–November. Target: *Tirpitz*. The British were determined to destroy the *Tirpitz*, hidden in Alta Fjord, Norway, before she could be repaired (see p. 1195). A surprise raid by carrier-based planes scored numerous hits with 1,000-lb. bombs, killing 300 of the *Tirpitz*'s crew, damaging guns and radar equipment, but not harming her armored sides or deck (April 3). Subsequent attacks were less successful, and the Germans pressed on with repairs. A long-range bomber finally (September 15) hit the *Tirpitz* with a 6,000-lb. bomb, causing damage that forced the Germans to move the giant ship to better repair facilities at Tromsö. After several more long-range attacks with 6-ton "blockbusters" against the well-protected ship, she was finally hit by several of these great bombs and sunk, carrying 1,200 men to the bottom (November 12).

1944, November–December. Doenitz Tries Again. As the weather turned wintry and the days shorter, Doenitz sent large numbers of his schnorkel-equipped submarines from his Baltic and Norwegian bases (the French bases having all been captured by the Allies) in intensified attacks against Allied shipping, this time trying the new and rather effective technique of operating near Britain in shallow coastal waters where the Allied detection equipment was

unreliable. Shipping losses again mounted, though never approaching the serious situation of 1941 and 1942.

The Combined Bomber Offensive

1944, January–May. Unremitting Pressure on Germany. The U.S. Strategic Air Forces (commanded by Lieutenant General **Carl Spaatz** and comprising the Eighth AF, based in England, and the Fifteenth AF, based in Italy) intensified operations, in continuing close cooperation with Air Marshal Harris' RAF Bomber Command. Thousand-plane raids were frequent, with the British bombers continuing to operate at night and the Americans by day, often striking the same targets in pulverizing one-two punches.

1944, February 20–26. The "Big Week." The Americans by day, the British by night, ranged over Germany in 5 days of coordinated strikes against Germany's airplane and antiaircraft factories and assembly plants, crisscrossing Leipzig, Regensburg, Augsburg, Fürth, and Stuttgart. The Luftwaffe rose to meet them in a last bid for supremacy. American losses alone in these operations were 244 heavy bombers and 33 fighter planes, but the Germans lost 692 planes in the air and many more on the ground.

1944, March–May. Attriting the Luftwaffe. The Germans lost 2,442 fighters in action and another 1,500 through accident or other causes. Although the German aircraft industry recovered from the "Big Week" blows, the loss in trained pilots during the period was irreparable. Allied air supremacy was henceforth unchallenged.

1944, May–June. Preparations for "Overlord." (See p. 1210.) The strategic bombers joined the tactical air forces in operations designed to "isolate the battlefield" over a great arc in France, the Low Countries, and western Germany—too widespread in direction and targets to betray the selected landing area. Bridges, tunnels, marshaling yards, and roads were plastered and the railway system largely paralyzed. All air bases in France in a 130-mile radius from the assault beaches were neutralized. By June 6, Normandy and Brittany were in effect isolated from the remainder of France. In all, some 4 million tons of bombs were dropped during the period, nearly 60 percent by American aircraft.

1944, June–August. Shuttle Bombing from Russia. To permit American bombers to strike farther east into Germany with greater bomb loads, and also to confuse German air-defense efforts, arrangements were made for them to fly east to bases behind the rapidly advancing Russian front. Despite operational success, the coordination with the Russians was never very effective. Also the Russian air defenses were unable to cope effectively with German counterraids on the American bases in Russia, resulting in severe American losses. The effort was therefore soon abandoned.

1944, July–December. Climax of the Strategic Air Offensive. The long-range bombers returned to their primary mission of attacking Germany's warmaking capacity, save for a few diversionary attacks on tactical targets to assist in the breakout from the Normandy beachhead (July; see p. 1211). The pattern of operations was as before, save that the growing number of planes permitted even more intensive operations. Principal targets were Germany's oil-production facilities and transportation system. All large industrial areas were struck, however, including steel plants, electric-power facilities, and weapon factories. The attacks on oil production drastically reduced the available fuel for airplanes, tanks, trucks, and submarines, thus affecting Germany's ability to fight on land, in the air, and at sea. Lack of fuel reduced the new fighter-pilot training, creating a vicious cycle; inadequately trained German pilots were quickly shot down by the attacking bombers and their fighter escorts. The attack on German transportation also had a wide effect, choking the flow of raw materials to factories, and of finished products to the German fighting forces and population. Finally the curve of German production began to drop sharply; the Combined Bomber Offensive was wrecking Germany's capability to continue the war.

Operations in Italy, 1944

Anzio-Rapido Campaign

1944, January 5–15. Drive to the Rapido. Stubborn assaults through the mountains, from the confluence of the Liri and Garigliano rivers north to the Apennines, advanced the Fifth Army nearly 7 miles to the final German Gustav Line along the Rapido, with Monte Cassino the key terrain obstacle in the bulge's center. Alexander planned a frontal attack, assisted by an amphibious landing at Anzio (Operation "Shingle"), some 60 miles from the Rapido front. The Anzio force would then advance inland to cut the German communications line. Although the 2 operations were beyond mutual-support capabilities, it was believed the dual operation would force evacuation of the Gustav Line. The Eighth Army, meanwhile, would continue its advance on Pescara, on the Adriatic coast.

1944, January 17–21. Rapido-Cassino Assaults. The X Corps attacked across the Garigliano, attaining a bridgehead. On its right the II Corps U.S. 36th Division attempted to force the Rapido, but was repulsed with heavy loss (January 17–19). The French corps nibbled north of Cassino to make slight but costly gains. As expected, German reserves were drawn to the Rapido front, and the amphibious operation was launched from Naples (January 21).

Anzio Operations, January 22–February 29

1944, January 22. The Landings. Major General **John P. Lucas'** VI Corps—some 50,000 Anglo-American troops, with 5,200 vehicles—began landing without opposition. Forty-eight hours later, most of the troops were ashore, the initial objectives attained, and a beachhead established, 7 miles deep. Lucas, however, made no attempt to drive inland toward the Alban Hills—the vital terrain. Instead, he consolidated his position, awaiting the landing of heavy weapons, tanks, and additional supplies. General Clark, who was present, concurred. But Kesselring's quick reaction brought German reinforcements from the north as well as from quiet sectors of the Gustav Line.

1944, January 23–February 16. German Build-up. Under General **Hans Georg Mackensen** the quickly extemporized Fourteenth Army pinned Lucas to his beachhead.

1944, February 16–29. German Counterattacks. A series of brutal blows drove back the outlying Allied units. Lucas was relieved (February 23) by Clark, Major General **Lucius K. Truscott, Jr.,** U.S. 3rd Division commander, replacing him.

1944, March–May. Stalemate. The amphibious assault became a siege for 3 more months with all the elements of World War I trench warfare. All portions of the narrow beachhead were under continuous observation and fire, while the Luftwaffe swept the harbor area, disrupting supply and reinforcement efforts.

1944, February–May. Operations on the Rapido. Fifth Army battered at the Gustav Line. The U.S. 34th Division assault on Monte Cassino, the so-called **First Battle of Cassino,** was repulsed (February 12). The New Zealand Corps then tried, supported by aerial bombardment (General **Bernard C. Freyburg** mistakenly thought the Germans were using the monastery for observation), in the **Second Battle of Cassino** (February 15–18), and also failed. The Germans quickly occupied the ruined monastery and repulsed the New Zealanders. The most massive close air support attack attempted to date brought no different result in the **Third Battle of Cassino** (March 15–23).

COMMENT. *Since the objective of the Anzio-Rapido operation was to pry the Germans out of the Gustav Line by utilizing Allied sea power to cut their line of communications, Anzio should have been the main effort, the Rapido merely a holding attack. But insufficient sea transportation (because of the demands of the 2 coming amphibious invasions of France) was available to ensure a sledge-hammer blow at Anzio. So the joint operation—and the responsibility must rest on Alexander—became a weak planning compromise: 2 main efforts, entirely incapable of mutual support, neither of them powerful enough to do the job alone. It can be argued that had Lucas immediately and boldly*

pushed ahead to his final objective—the Alban Hills—the Gustav Line must have collapsed, with Rome quickly occupied. But Lucas' commander, General Clark, was ashore on D day and concurred in the decision to consolidate before driving inland. Some 23,860 American and 9,203 British casualties were evacuated during the 4-month hell on the beachhead. In the end the Gustav Line collapsed only as a result of the very type of frontal attack the amphibious operation was designed to avoid.

1944, March 15–May 11. Operation "Strangle." U.S. Major General **Ira C. Eaker's** Anglo-American Mediterranean Allied Air Forces undertook a systematic air interdiction campaign to cut off supplies to German troops south of Rome. Despite severe punishment, the Germans did not withdraw as Allied air planners had hoped. However, the effect would soon be evident when intensive ground pressure was combined with the air interdiction campaign.

Rome Campaign

1944, May 11–25. Breakthrough. Regrouped to bring the weight of the 15th Army Group into his main effort, Alexander launched a full-scale surprise assault in the 20-mile zone between Cassino and the sea. The interdiction pressures of "Strangle" were intensified. In the combined air-ground offensive, "Diadem," French, Polish, British, Canadian, and U.S. units smashed through the German lines. The Poles took Cassino (May 17–18). At Anzio the reinforced VI Corps attacked (May 23) toward the Alban Hills; contact was made between the two Allied forces two days later.

1944, May 26–June 4. Advance on Rome. General Clark's shift of the Fifth Army toward Rome now saved the German Tenth Army from possible envelopment. Skillfully handled rear guards checked American advances at Valmontone and Velletri (May 28–June 2), while the remainder of the Tenth Army fell back. Rome was entered (June 4), hot on the heels of a general German retirement.

1944, June–August. Advance to the Arno. The Allies pushed rapidly up the peninsula. But withdrawals of troops—both ground and air—to mount the invasion of southern France (see p. 1212) reduced Alexander's strength, while German reinforcements bolstered Kesselring. In a series of masterly delaying actions the Germans—despite Allied air superiority—retired to the Gothic Line, extending across the peninsula south of Bologna, its outposts running generally from Pisa, through Florence, to Ancona.

1944, August–December. Advance to the Gothic Line. The Fifth Army crossed the Arno (August 26). Leese's Eighth Army took Rimini (September 21), and Clark, committing all his reserves, made an unsuccessful bid for Bologna (October 1–20). Another Italian winter settled on an exhausted Allied army group. Alexander, promoted to Supreme Allied Commander in place of Wilson (transferred to head the British military mission in Washington), was replaced by Clark. Truscott took over the Fifth Army and Lieutenant General **Richard L. McCreery** took over the Eighth from Leese.

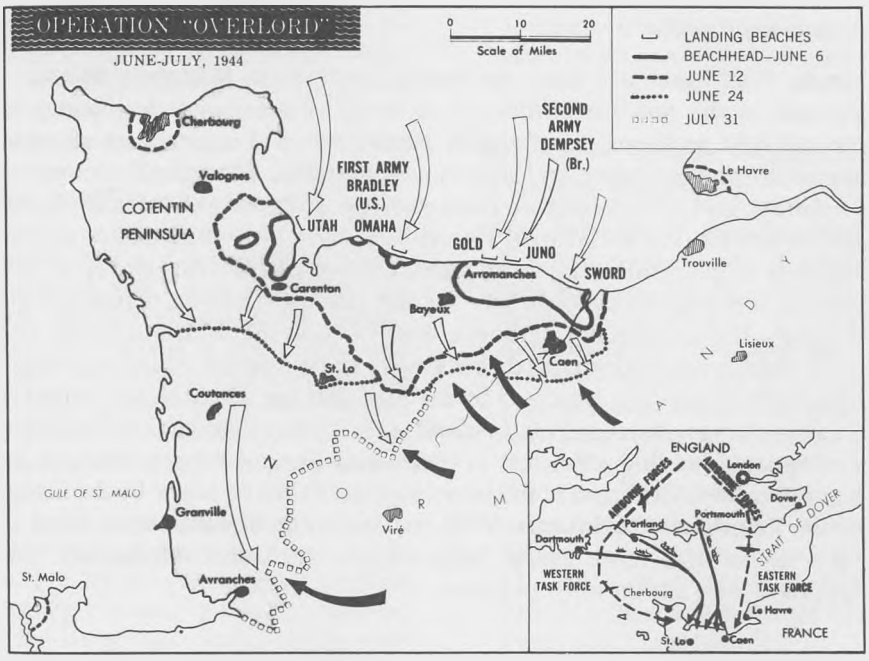
The Allied Invasion of Western Europe

The Preliminaries, May 1943–May 1944

Allied Situation and Plans

At the Trident Conference (see p. 1193), President Roosevelt and Prime Minister Churchill agreed on a major cross-Channel invasion of Europe in 1944. Planning was under Lieutenant General Sir **Frederick Morgan;** the target date was set as the first week of June 1944. A gigantic amphibious operation from southern England to France, with nearly 3 million men, was planned. After all possible landing sites were considered, the area east of the Cotentin

Peninsula of Normandy was selected, because of (a) its proximity to Allied fighter bases in England, (b) the short water distance for carrying supplies and reinforcements in limited numbers of landing craft, (c) the nature of the beaches, (d) the nature of the inland area, and (e) the German defenses. In February, General Eisenhower, designated to command the invasion, established Supreme Headquarters Allied Expeditionary Forces (SHAEF), approved the planning done by General Morgan's staff on Operation "Overload," as the invasion was designated, and continued plans and preparations. By May, 1944, he reported to the CCS that his force was ready.



In essence, the Allied plan envisaged assault landings on 5 main beaches. Lieutenant General Omar Bradley's First U.S. Army was to land on Utah Beach, north-west of the impassable marshy Carentan estuary, and on Omaha Beach just east of the estuary. The decision to risk defeat in detail on these beaches was made because of the importance of Utah Beach as a base for a quick drive to seize the port of Cherbourg, essential to future logistical support. To reduce the danger of this decision, 2 airborne divisions were to be dropped well inland of the marsh country to facilitate early link-up of the 2 beachheads. Farther east General Sir **Miles Dempsey**'s British Second Army (including a Canadian corps) would land on 3 beaches—Juno, Sword, and Gold—west of the Orne River. Another airborne division was to land just east of the Orne to protect the British left flank. Overall commander of Allied ground forces was British General Sir **Bernard L. Montgomery.** The total combat strength of the invasion forces gathered in England was 45 divisions, totaling with supporting units about 1 million men (two-

thirds American). Almost another million comprised the tremendous logistical and administrative support forces which would sustain the combat units.

The supporting naval and air elements totaled almost another million men. Commanding the invasion armada was British Admiral Sir **Bertram Ramsay.** British and American tactical air forces were commanded by RAF Air Marshal Sir **Trafford Leigh-Mallory.** For the period just before and after the attack, General Spaatz's long-range American bombers were also placed under Eisenhower's command. Eisenhower's deputy commander was RAF Air Chief Marshal Sir **Arthur Tedder.**

GERMAN SITUATION AND PLANS

Hitler's "Atlantic Wall" stretched from the North Sea coast to Brittany's Atlantic nose and thence southward to the Spanish border—a network of permanent fortifications laced by strong points and field positions, protected by mine fields and underwater obstacles. Inland areas favoring air drops were mined and strewn with obstacles. Manning this complex were 10 Panzer, 15 infantry, and 33 training or coast-defense divisions (of inferior quality) of the Western High Command (von Rundstedt) spread from Norway to the Mediterranean. German troops immediately available in the invasion area were portions of Army Group B (Seventh and Fifteenth Armies), commanded by Rommel—4 coast-defense divisions manning fortifications, 2 infantry divisions, the garrison of Cherbourg, and 3 Panzer divisions in reserve. The remainder of Rommel's troops were frozen, partly because of the disruptive Allied bombing offensive, partly because of Hitler's orders. Obsessed by the idea that the Allied thrust would come over the Pas de Calais—shortest distance from England—the Führer insisted that the Fifteenth Army (east of the designated landing area) rest in place, and that no Panzer divisions be released without his specific order. The brunt of the invasion would thus be borne by the Seventh Army, Colonel General **Friedrich Dollmann.** With the Luftwaffe already swept from the sky by Allied air, and no naval defense except light torpedo craft and submarines, the German situation was precarious, but far from hopeless.

Operation "Overlord"

1944, June 6. D Day. Preceded by the airborne drops—2 U.S. divisions on the west and 1 British division on the east—the greatest amphibious assault yet known to history began landing on the Normandy coast in complete tactical surprise. Some 4,000 ships and landing craft carried 176,000 troops and their matériel. Escorting the armada were 600 warships. The Allied air forces had earlier drenched the terrain with bombs; 10,000 tons of explosive were dropped by some 2,500 heavy bombers, while 7,000 fighters and fighter-bombers combed the area. Supporting the assault were the guns of the warships, large and small. By nightfall, 5 divisions were ashore and a comfortable toehold had been obtained at all beaches except Omaha, where German resistance had been heaviest and defending artillery fire best directed. There the initial assaults bogged down for a time. Meanwhile, offshore, an amazing conglomeration of concrete floating caissons—"Mulberries," a British invention spurred by Churchill's insistence—was being jockeyed into position to make 2 artificial ports, protected by lines of old vessels scuttled to provide breakwaters. (An unexpected storm of great ferocity was to destroy the American artificial port, June 19, and thereafter supply for both Allied forces moved through the British artificial harbor.)

1944, June 7–18. Expansion. Hitler's fixation that another Allied attack would come in the Pas de Calais area hampered Rundstedt and Rommel in their defensive strategy; reinforcements came in bits and pieces, and part of the Panzer strength was frittered away in piecemeal counterattacks. But the *bocage* (checkerboard of small fields boxed by deep hedgerows) reduced the Allied advance to a crawl. German resistance centered about Carentan and Caen. Montgomery's efforts to take Caen were rebuffed (June 13 and 18), while on the right the U.S. VII Corps, Major General **J. Lawton Collins,** was slowly battering its way across the Cotentin peninsula base. It turned north (June 18) and drove for Cherbourg, while the remainder of Bradley's army took up an aggressive defense.

1944, June 27. Fall of Cherbourg. The garrison surrendered after 5 days of desperate defense, and after demolishing harbor installations. The harbor would not be cleared until August 7, but beach unloading there began immediately. During this time Rommel had attempted to mass armor for a counterattack on the British, but was forced to commit his divisions piecemeal.

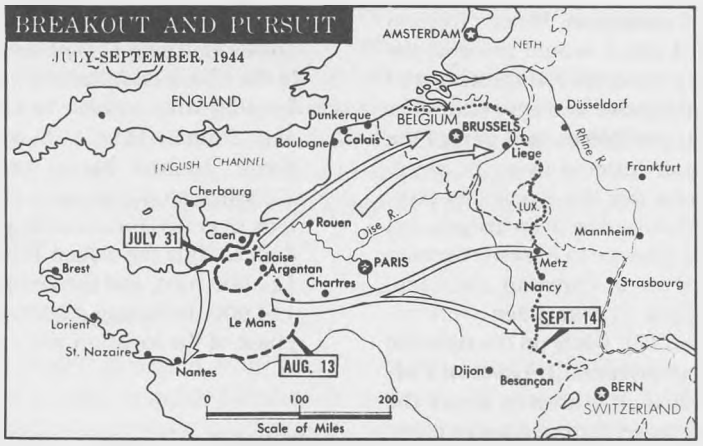
1944, July 1–24. Expansion of the Beachhead. Allied strength ashore built up to 1 million men, 150,000 vehicles, and half a million tons of supply. However, progress southward through the *bocage* was disappointngly slow and costly, and the Germans had caught their second wind. Rundstedt was relieved by Hitler, Marshal **Günther von Kluge** taking his place. SS General **Paul Hausser** (Dollmann had been killed) opposed the U.S. First Army's advance with approximately 7 veteran divisions of the Seventh Army, while Panzer Group West, General **Heinrich Eberbach,** barred the British advance with 7 armored and 2 infantry divisions. Montgomery made some progress (July 8) following a heavy bombing attack and renewed his effort, finally taking Caen (July 13). Then, after a costly repulse southeast of Caen (July 20), the attack halted. It had, however, drawn German armored strength to the British front. Bradley prepared for a breakthrough after having slowly crunched his way into St.-Lô (July 18), losing 11,000 casualties. Meanwhile, in the Channel, Allied sea power held open the crossing lanes against 56 German submarines and German light craft operating out of Le Havre. Rommel having been wounded (July 17) when an Allied plane strafed his car, Kluge took over his command in addition to his other duties. Thus far, Allied losses had been some 122,000 men, and the Germans had lost about 114,000, including 41,000 prisoners. The first phase of the invasion was complete.

Operation "Cobra"—Breakout from the Beachhead

1944, July 25–31. Breakthrough. Bradley's U.S. First Army assaulted to penetrate the German line west of St.-Lô, with Collins' VII Corps making the main effort. A tremendous bomb carpet by Spaatz's long-range bombers—4,200 tons of explosive—opened a gap, although through miscalculation more than 500 Americans were killed or wounded by "shorts." (General **Lesley J. McNair,** commander of U.S. Army Ground Forces, present as an observer, was killed.) The assault advanced through heavy resistance to Coutances (July 28) and Collins' armor reached Avranches (July 31). Hitler released some Fifteenth Army divisions to Kluge (July 27).

1944, August 1. Allied Reorganization. Unveiled now was the U.S. Third Army, Patton commanding, taking the right of the Allied line. The U.S. 12th Army Group came into existence, Bradley commanding, with Lieutenant General **Courtney Hodges** leading the First Army. In the British zone Montgomery's 21st Army Group also expanded—comprising the Canadian First Army, Lieutenant General **Henry D. G. Crerar,** on the left of Dempsey's Second British Army. Montgomery remained over all ground-force commander.

1944, August 1–13. Breakout and Exploitation. Patton's Third Army whirled through the Avranches gap. His armor scoured Brittany, then turned south to the Loire and pointed



eastward. His infantry curved left toward Le Mans. On the inner ring, the First Army began pivoting to its left.

1944, August 6–10. Counterattack at Avranches. The First Army was momentarily halted by a vicious German counterattack ordered personally by Hitler. Kluge, gathering all available Panzer strength, hurled it westward at Mortain, toward Avranches, hoping to isolate the Third Army and—ultimately—to turn north and crush the Normandy beachhead. Bradley shifted reinforcements and—with the aid of air power, mostly British—Kluge's attack was halted (August 8), although, against his protests, Hitler ordered the effort continued for 2 more days. Meanwhile, oblivious to the threat, the Americans from the southwest and the British from the north bore down on the Germans in a pincers movement.

1944, August 13–19. Falaise-Argentan Pocket. Allied misunderstandings and some timidity contributed to provide a gap through which the now much-disorganized German Seventh and Fifth Panzer (former Panzer Group West) armies fled eastward. As it was, although a goodly part of the German armor got away, some 50,000 Germans were captured and 10,000 more lay dead. These operations cost the U.S. First Army 19,000 casualties; the Third Army suffered about 10,000.

1944, August 20–30. Pursuit. Kluge, in full retreat, made for the safety of the Seine bridges, with all 4 Allied armies in full cry behind him. The Allies advanced to the Seine from Troyes to the Channel (August 25).

1944, August 25. Liberation of Paris. The local population had risen (August 23) and was liberated by the U.S. Fifth Corps, with Leclerc's French 2nd Armored Division spearheading the drive. Kluge's reward for a remarkable salvaging of the German remnants from the Falaise-Argentan gap was to be dismissed by Hitler; General **Walther Model** assumed command of Army Group B. Kluge committed suicide a short time later.

1944, August–September. Germans Isolated in Western France. At Hitler's orders, some German garrisons held French westcoast ports: Brest (captured September 18 after a long siege), Lorient, St.-Nazaire, La Rochelle, and the Gironde estuary (all of which held out for several more months). A wandering German army corps south of the Loire was hunting for Allied troops to surrender to, as the countryside boiled in the French Resistance movement—nominally at least under SHAEF direction.

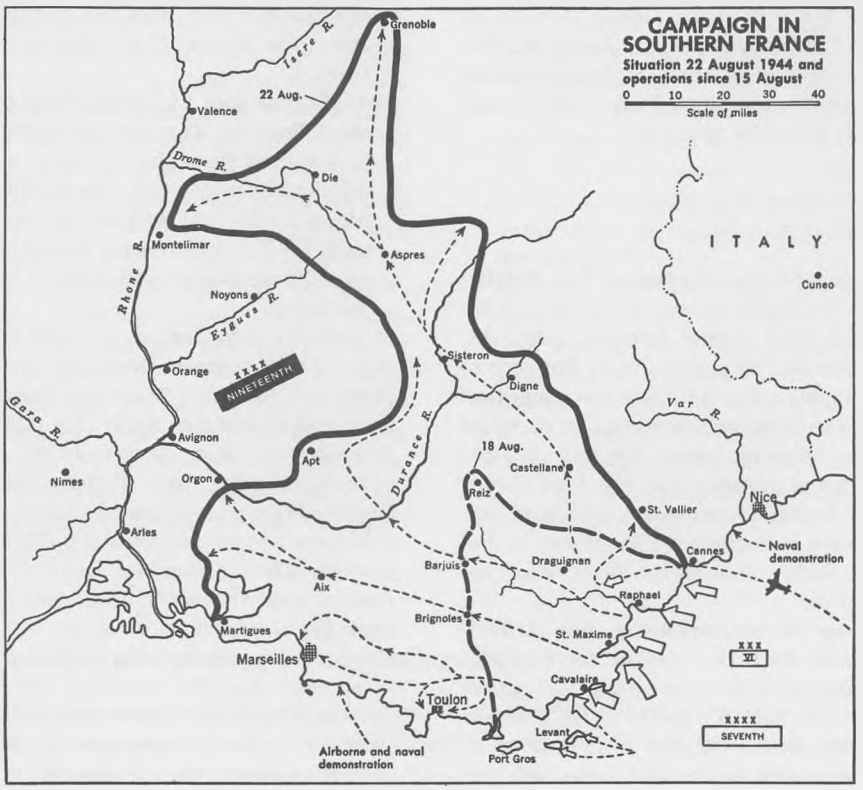
Operation "Anvil-Dragoon"—Southern France

1944, August 15. The Landings. The U.S. Seventh Army (Lieutenant General **Alexander Patch**), consisting of the U.S. VI and French II corps, with a provisional airborne division,

made an amphibious landing and air drop on the Côte d'Azur between Hyères and Cannes. The objective was to free Marseilles (for supply) and protect Eisenhower's southern flank. Mounted in the Mediterranean Theater, the operation was supported by tactical and strategic air forces, while ships of the Western Task Force escorted. Assault landings were made by General Truscott's VI Corps at small cost. By nightfall, some 94,000 men and more than 11,000 vehicles were ashore, the German coastal defense—2 second-line infantry divisions—broken, and over 2,000 prisoners taken. The assault casualties amounted to 183 men killed and wounded, with 49 nonbattle casualties. The French (General **Jean de Lattre de Tassigny**) began landing immediately behind the assault units.

1944, August 16–28. Pursuit. While de Lattre's French troops turned west toward Toulon and Marseille, Truscott's VI Corps boldly thrust north in 2 columns, the main body up the Rhone Valley, the other through the foothills of the Alpes Maritimes. German General **Friedrich Wiese**'s Nineteenth Army was retreating in considerable disorder up the Rhone Valley. German strength consisted of 7 second-rate infantry divisions and the well-handled 11th Panzer Division. Operating on a logistical shoestring, Truscott's fast-moving right column (Task Force Butler and the 36th Division) raced and passed the Germans in the Rhone Valley, then turned west to close the trap at Montélimar (August 22).

1944, August 23–28. Battle of Montélimar. Indecision on the part of the American 36th Division and a vigorous Panzer counterattack kept the block open long enough to let most of the German Army fight its way past Task Force Butler, whose artillery, supported by tactical air, took a terrible toll. The road from Montélimar north to Loriol became a shambles.



More than 15,000 prisoners were taken, while some 4,000 vehicles—tanks, guns, and trucks—were destroyed. The number of German dead is unknown.

COMMENT. *Truscott's Rhône Valley campaign is a shining example of boldness and initiative. In 14 days of incessant drive he had practically destroyed a German army with 1,316 of its 1,481 guns, captured 32,211 prisoners, and advanced some 175 miles, at a cost of 1,395 killed and 5,879 wounded and missing. The French component of the Seventh Army captured Toulon and Marseille (August 28), taking 47,717 prisoners, losing some 1,300 killed and 5,000 wounded and missing. German forces in the south of France had been eliminated.*

1944, August 29–September 15. Advance to the Vosges. Patch's Seventh Army moved north, the U.S. VI Corps leading, with the French I and II corps following on the right and left flanks respectively. Contact with Patton's Third Army was made west of Dijon (September 11). The southern invasion force then became the U.S. 6th Army Group (September 15), under Lieutenant General **Jacob M. Devers,** its components the U.S. Seventh Army and the newly established French First Army, General de Lattre de Tassigny.

Advance to the Westwall, August 27–September 14

1944, August 27–September 4. The British Pursuit. The AEF had crossed the Seine in hot pursuit of the ebbing German tide. But Eisenhower needed possession of Antwerp to provide supply—the 300-mile-long logistical line from the Normandy beaches was stretched almost to breaking point. He thus favored Montgomery's advance into the Low Countries. The British Second Army advanced rapidly. Brussels was entered (September 3) and Antwerp, with port facilities intact, was captured next day.

1944, August 27–September 4. The American Pursuit Falters. Gasoline for Bradley's army group was reduced to a trickle as supplies went to the British. Patton's Third Army crossed the Meuse (August 30), only to be halted there with empty fuel tanks. Hodges' First Army, after bagging 25,000 prisoners at **Mons** (September 3), was also reduced to inchworm progress.

1944, September 3. Eisenhower Assumes Direct Command of Ground Operations. This permitted Montgomery to devote full attention to the 21st Army Group.

1944, September 4–14. The Germans Block Antwerp. Hitler ordered General Kurt Student's First Parachute Army to block further advance across the Albert Canal, and General **Gustav von Zangen**'s Fifteenth Army to hold the Scheldt estuary. Until that had been cleared, Antwerp was of no use as an Allied port. Clearing Antwerp became the main mission of the Second Army, while the Canadian First Army, after investing Le Havre, moved up the coast to clear the Channel ports and to overrun the V-1 missile sites in the Pas de Calais area.

1944, September 5. Recall of Rundstedt. Hitler again assigned Rundstedt to supreme command in the west. He prepared a stand along the Westwall fortified zone (Siegfried Line).

1944, September 14. Allies Close on the German Border. The line ran northward from Switzerland, through Lorraine to Aachen, then northwesterly through Maastricht, along the Albert Canal, and west to the Channel at Ostend. Bradley's 12th Army Group had renewed a creeping advance, still hampered by gasoline shortage.

COMMENT. *Since June 6, the Allies had put more than 2.1 million men on French soil, shattered Hitler's dream of a* Festung Europa, *and flung the German forces back to their own border. The stupendous drive through France had cost some 40,000 Allied killed, 165,000 wounded, and 20,000 missing. German losses had been a catastrophic half-million men in the field forces and an additional 200,000 in the coastal fortresses. Chewed, disrupted, and battered, the remnants now stood behind the dilapidated Siegfried Line, seemingly vulnerable to an Allied* coup de grâce. *However, their homogeneous staff structure was still intact, their discipline remained, and replacements were being rushed from Germany and the east. Rundstedt and his principal subordinates provided a high order of leadership. The war was still far from its end.*

Invasion of Germany, 1944

Both Montgomery and Bradley were convinced that a single thrust into Germany, furnished with unlimited support, would end the war, but neither desired to play second fiddle. Eisenhower, straddling, approved Montgomery's plan to turn the northern German flank by seizing a northern bridgehead over the Maas (Meuse) before clearing the water approaches to Antwerp. The First Allied Airborne Army (3 divisions) under Major General **Lewis H. Brereton,** in reserve in England, was attached to Montgomery's command for the operations.

OPERATION "MARKET GARDEN"

Montgomery's bold plan was to drop 3 airborne divisions as stepping-stones behind the German lines along a narrow 60-mile causeway over marshy ground, seizing the bridges of three rivers—the Maas (Meuse), Waal (Rhine), and Lek (lower Rhine). The British Second Army—led by XXX Corps—would drive across this "airborne carpet" and turn the northern flank of the Siegfried Line.

1944, **September 17. Air Drops at Arnhem, Nijmegen, and Eindhoven.** The daylight drops were successful, but German resistance on the ground was stronger than expected. The U.S. 101st Division secured the Wilhelmina Canal crossing near Eindhoven. The U.S. 82nd captured the Maas bridge at Grave, but was unable to gain the Waal bridge at Nijmegen. The British 1st Airborne Division, with a Polish brigade attached, reached the Arnhem area north of the Lek (Neder Rijn), but at once became involved with unexpectedly strong German forces. The British ground advance, spearheaded by tanks, reached Eindhoven to join the 101st (September 18). The Nijmegen bridge was secured after another 24 hours of bitter fighting by a joint Anglo-American assault. Bad weather and lack of maneuver ground in the flooded countryside hampered further advance, though detachments reached the south bank of the Lek.

1944, September 17–26. Battle of Arnhem. The British 1st Airborne was pocketed by German reinforcements and forced into a small perimeter, though clinging for a while to the Lek bridgehead. Behind them the Germans now completely barred the way to further Allied advance and bad weather prevented dropping of reinforcements or supply. Ringed by close-in artillery and mortar fire, with food and ammunition exhausted, and forced away from the bridge, the defense collapsed. Some 2,200 survivors were evacuated across the Lek in assault boats during the night (September 25–26), leaving 7,000 men behind them killed, wounded, or captured.

COMMENT. *The stand of the 1st Airborne Division at Arnhem ranks high in the annals of the British Army. German reaction was prompt, skillful, and efficient. The Rhine barrier still faced the Allies and the German defense was still intact.*

THE SCHELDT ESTUARY CAMPAIGN, OCTOBER–NOVEMBER

Montgomery now turned to the task essential to any further Allied advance—liberation of the water gate to Antwerp. The keys to the Scheldt were the South Beveland peninsula and Walcheren Island at its western tip, both highly fortified.

1944, October 1–November 8. Battle for South Beveland and Walcheren Island. Furious British assaults (some American units participated), plus a small amphibious operation, resulted in capture of the peninsula (October 31) after both sides suffered heavy losses. Walcheren Island fell (November 8) to an amphibious assault, following on the flooding of the defenses by Allied air bombings of the sea dikes. The Scheldt was now free, for the south shore had been cleared already (October 22).

1944, November 4–26. Minesweeping the Scheldt. Even before the last gun was fired at Walcheren, one of the most difficult mine sweeps of the war had begun. The 70-mile channel to Antwerp was combed 16 times by 100 Allied vessels before the first Allied convoy entered the port (November 27).

BREAKING THE SIEGFRIED LINE, OCTOBER–DECEMBER

1944, October 1–23. American Advance to the Westwall. Bradley's 12th Army Group pressed against the Siegfried Line from above Maastrich to Lunéville—3 armies now, for the new U.S. Ninth Army, Lieutenant General **William H. Simpson,** had joined (October 3). From Lunéville to the Swiss border, Devers' 6th Army Group penetrated Alsace and the Vosges Mountains. Winter was closing in. German opposition west of the Rhine was strong. Rundstedt's command, OB West, consisted from north to south of Student's Army Group H, from the North Sea to below Roermond; Model's Army Group B, reaching south to the line of the Moselle; and **Hermann Balck**'s Army Group G to Karlsruhe. An SS group, under SS Chief **Heinrich Himmler,** held the remainder of the line to Switzerland. Patton's Third Army reached and closed in on Metz (October 3). Hodges' First Army captured **Aachen** after furious fighting (October 21), the first breach of the Siegfried Line.

1944, October 28. Eisenhower Orders November Offensive. This was to destroy all German forces west of the Rhine, to establish bridgeheads across it, and to advance into Germany.

1944, November 2–7. Repulse at Schmidt. The U.S. 28th Division of the V Corps was repulsed in efforts to take Schmidt, just north of the Roer River dams.

1944, November 16–December 15. Roer River-Hürtgen Forest Operations. Bradley's Ninth and First Armies attacked against heavy opposition, over difficult terrain, enlarging the Aachen breakthrough. Major obstacle was the Hürtgen Forest. The attack, on a narrow front, reached the Roer River, but crossing could not be attempted until the dams near Schmidt had been seized to prevent the Germans from flooding the valley. A major offensive for this purpose was begun (December 13).

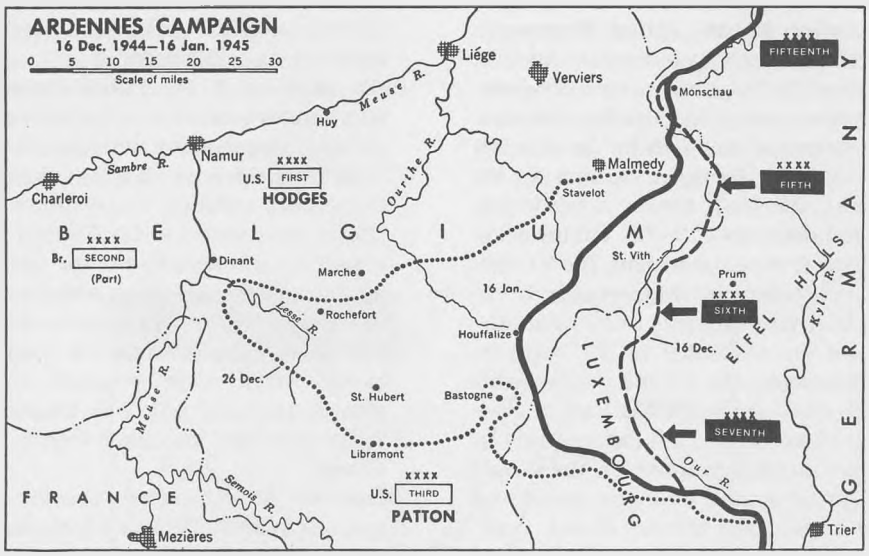
1944, November 16–December 15. Lorraine Operations. Patton's Third Army captured **Metz** (December 13) and battled its way across the Seille River.

1944, November 16–December 15. Alsace Operations. Devers' group made deep gains; Seventh Army's French 2nd Armored Division* thrust through the Saverne Gap of the Vosges Mountains to liberate Strasbourg (November 23), rousing French national morale to a peak. The French First Army overran Mulhouse. Devers was now on the Rhine from Karlsruhe to below Strasbourg, and again from Mulhouse to the Swiss border; but the deep Colmar pocket in between was still firmly held by Wiese's German Nineteenth Army.

*Bitter perosnal enmity existed between Leclerc and and de Lattre de Tassigny; hence the French 2nd Armored Division was never under the latter's command.

GERMAN ARDENNES OFFENSIVE (BATTLE OF THE BULGE), DECEMBER 1944–JANUARY 1945

The German Plan. Hitler had prepared a striking force to split the Allies. His armor would rip through to Antwerp, crippling their supply. He hoped to destroy all Allied forces north of the line Antwerp-Brussels-Bastogne, just as in 1940. Success depended on three elements: (1) a breakthrough, (2) seizure of Allied fuel supplies and the key focal points of communication in the area St.-Vith and Bastogne, and (3) widening of the initial gap to increase the flow of invasion. Hitler's commanders, though dubious of success, obeyed orders.



1944, December 16–19. The German Blow. The operation was launched after a period of fog, rain, and snow blanketed Allied aerial observation and hobbled combat capabilities. The striking force, from north to south, consisted of the Sixth SS (General **Sepp Dietrich**) and Fifth (General **Hasso von Manteuffel**) Panzer armies—24 divisions, 10 of them armored. The Seventh Army (General **Ernst Brandenberger**) was to cover the southern flank. The initial wave—5 Panzer, 12 infantry-type divisions—disrupted the U.S. VIII Corps. Tactical and strategic surprise was complete. (SHAEF intelligence estimates had dismissed all probability of any immediate major German offensive capability.) The 106th Division, just arrived on the front, and the 28th Division, recuperating from severe fighting at Schmidt, were shattered. A paratroop drop in the area Eupen-Monschau, and a spearhead force of English-speaking German soldiers in American uniforms, added to panic and confusion behind the assault zone. But on the north flank, the U.S. V Corps, halting its own offensive toward the Roer dams, held firm, as did the U.S. 4th Division on the south. Canalized between these shoulders, the attack roared on toward the Meuse. Two U.S. armored divisions were rushed in by Bradley as immediate reinforcement. Eisenhower then committed the SHAEF reserve—the 82nd and 101st Airborne divisions (recuperating near Reims from their Maas operation). Truckborne,

they arrived (December 19)—the 101st (under Brigadier General **Anthony C. McAuliffe**) at Bastogne, a check to Fifth Panzer Army's progress, and the 82nd (Major General **Matthew B. Ridgway**) to bolster the northern flank. Montgomery began shifting 1 British corps to backstop the operation along the Meuse. At Bradley's order, Patton (December 18) halted his Third Army's advance in the Saar to begin an amazing 90° shift in direction to the north, to hit the German southern flank.

1944, December 20–26. Allied Recovery. Eisenhower transferred command of all U.S. troops north of the bulge to Montgomery, leaving only Patton's army under Bradley. Despite a desperate defense of **St.-Vith** by the U.S. 7th Armored Division (Brigadier General **R. W. Hasbrouck**), the Sixth Panzer Army forged slowly ahead (December 19–22), but the delay had been fatal to the German plan. The V Corps was still presenting an impenetrable front, while the U.S. VII Corps was hurrying southwest to seal the remainder of the northern flank. At **Bastogne,** the 101st Airborne, with some other units—some 18,000 men in all—resisted all efforts of the Fifth Panzer Army to overrun their perimeter. However, the invading tide, lapping around Bastogne, progressed northwest toward the Meuse. Model, commanding Army Group B, quite properly desired now to shift the weight of the German assault to Manteuffel's Fifth Panzer Army, but Hitler, obstinate and ignorant, insisted the decisive blow be struck by his SS pet, Dietrich. By December 22, Patton was attacking north toward beleaguered Bastogne on a 2-corps front, while Devers' 6th Army Group extended its left to cover his advance. Dietrich's penetration in the Manhay-Stavelot area, and Manteuffel's spearheads—Panzer Lehr and 2nd Panzer divisions—were grinding to a halt with empty fuel tanks at **Celles,** almost in sight of the Meuse, to be struck by American and British counterattacks (December 25–26). Hitler's gamble had failed. Patton's Third Army punched a hole through Manteuffel's troops to reach Bastogne (December 26), and, with the first clear weather, Allied air began pounding German supply trains west of St.-Vith.

1944, December 26–1945, January 2. The Battle for Bastogne. Hitler insisted on the capture of Bastogne, and a furious battle raged for a week while the German tide ebbed elsewhere in the Bulge under Allied pressure. Attempting to disrupt Allied air support, the Luftwaffe made its last offensive strike (January 1), some 800 planes attacking airfields in France, Belgium, and Holland, and destroying 156 Allied planes. The attack was repulsed with heavy losses to the Germans, and the Allied air offensive over the Ardennes area and German rear elements continued.

1945, January 3–16. Allied Counteroffensive. On the northern flank of the German penetration, Montgomery unleashed Hodges' U.S. First Army. German offensive efforts near Bastogne were repulsed, and Patton's increasing efforts, supported by XIX Tactical Air Force, shrank the southern face of the German penetration. Hitler permitted withdrawal of the Sixth Panzer Army (January 8; see p. 1228). The Bulge was eliminated (January 16). Hodges' First Army returned to Bradley's control (January 18), but Simpson's Ninth Army remained in Montgomery's 21st Army Group.

COMMENT. *Hitler's Ardennes offensive was a gamble, pure and simple. The blow was checked first by the resistance of the U.S. elements on both shoulders, next by Hasbrouck's stand at St.-Vith and McAuliffe's epic defense of Bastogne. Hitler's refusal to shift the weight of the attack to the flank making the best progress was stupid. When the German armor was unable to overrun Allied fuel depots to replenish its tanks, the end was inevitable. The net result was a delay of about 6 weeks to Allied operations in the west, while Hitler had expended the slim reserves with which he otherwise might have checked the coming Russian spring offensive. German losses were some 120,000 men killed, wounded, or missing, 600 tanks and assault guns, 1,600 planes, and 6,000 vehicles. Allied losses (mostly American) were approximately 7,000 killed, 33,400 wounded, 21,000 captured or missing, and 730-odd tanks and tank destroyers. Among the Americans were 86 prisoners captured by the 1st SS Panzer Division at Malmédy on December 17th, then lined up and ruthlessly machine-gunned to death.*

The Eastern Front

Russian Winter Offensive

Following a series of probing attacks, the Soviet armies launched a concerted drive as winter hardened roads and froze the waterways.

1944, January 15–19. Liberation of Leningrad. Two Russian army groups fell on the German Eighteenth Army, investing Leningrad. General **L. A. Govorov**'s Leningrad Front, crossing the frozen Gulf of Finland, pierced the German left, while General **Kirill A. Meretzkov**'s Volkhov Front swept over frozen lakes and swamps to penetrate the German right. Novgorod was taken (January 19). German forces under General **Georg Lindemann** escaped annihilation only by rapid withdrawal. A third Russian group—General **M. M. Popov**'s Second Baltic Front—threatened further envelopment and caused the retirement of General von Kuechler's entire German Army Group North. Model, who replaced Kuechler (January 31), checked the Soviet drive along the line Narva-Pskov-Polotsk (March 1), when the spring thaws impeded further Russian progress.

1944, January 29–February 17. Battle of Korsun. Farther south, the main Russian offensive hit Manstein's Army Group South along the Dnieper River. The First Ukrainian Front (now under Zhukov; Vatutin had been killed) from the north, and Konev's Second Ukrainian Front from the south, encircled the German salient at Korsun, trapping 2 army corps. Manstein's immediate counterattacks bogged down in blizzards and thaws, and attempts of the trapped troops to cut their way out were only partially successful. German casualties were about 100,000. The Russian advance continued southwest across the Bug and Dniester rivers, despite desperate counterattacks by Manstein.

1944, March 10–April 10. Isolation of the First Panzer Army. General Hube, commanding the First Panzer, and operating under instructions from Manstein, kept up a magnificent defensive-offensive behind the Russian lines, playing hob with communications. A hastily-improvised Luftwaffe airlift brought in supply, while the Fourth Panzer Army drove southeast (April 5) below Tarnapol to make contact. Hube attacked westward, fighting defensively to the flanks and rear, and brought out his command practically intact.

1944, March–April. Ukraine and Rumania. Kleist's Army Group A, under pressure both by Konev and by General **Rodion Y. Malinovskiy's** Third Ukrainian Front, was forced back after furious fighting, in which the German Sixth and Eighth armies were badly cut up, and Odessa evacuated (April 10).

1944, March 30. Relief of Manstein and Kleist. Infuriated by these reverses, Hitler relieved both his southern group commanders, Model replacing brilliant Manstein and General **Ferdinand Schoerner** succeeding Kleist. By mid-April, when the thaws and Model's counteroffensive from Lwow had slowed down the Russian advance, the entire western Ukraine had been cleared and Konev's spearheads were threatening the Carpathian passes.

COMMENT. *Several elements in this vast panorama of war of movement stand out: the methodical progression of the Russian masses in a war of attrition closely directed by the Soviet high command; the amazing tenacity and ability of the German commanders, fighting a campaign they all knew was being lost through their Führer's madness; and the simple devotion of the soldiers on both sides. The mobility and efficiency of the Soviet armies were due primarily to Allied logistical assistance provided through Lend Lease.*

The Soviet Summer Offensive

Hitler's obsession to hold at all costs all occupied terrain prevented any steps to rectify, consolidate, and fortify the Eastern Front during the respite granted by the spring thaws. In consequence, his thin-spread 1,400-mile-long cordon lacked reserves and depth when Stalin launched his next offensive, in step with the Anglo-American invasion of France.

1944, June 22–July 10. Battle for White Russia. Stalin (Marshal Zhukov, now deputy supreme commander, controlled the operation) struck first north of the Pripet Marsh area, after an outburst of guerrilla activity paralyzed General **Ernst Busch**'s communications in rear of Army Group Center (June 22). Supported by an immense mass of artillery (estimated at 400 guns per mile of front), the Russian Third, Second, and First White Russian Fronts assaulted on a 350-mile front along the axis Smolensk-Minsk-Warsaw. Air superiority was complete; the Luftwaffe had been drained for the Western Front. Soviet armor tore open a 250-mile-wide gap, encircling German strong points, which were then smothered by great masses of infantry. In turn, **Vitebsk** (June 25), **Bobruisk** (June 27), and **Minsk** (July 3) were captured. Army Group Center was completely shattered, some 25 of its 33 divisions trapped. Soviet estimates claimed 158,000 Germans captured, 381,000 killed, and the destruc-

tion or capture of more than 2,000 tanks, 10,000 guns, and 57,000 motor vehicles. Model was rushed north by Hitler to replace Busch.

1944, July 10–September 19. Defeat of Finland. A Soviet drive under Govorov had broken through the Mannerheim Line, capturing **Viipuri** (June 20). Now the eastern Finnish defenses were overrun in the Lake Onega region. Hostilities between Finland and the U.S.S.R. ceased by truce (September 4). The German Twentieth Army still clung in the north around the naval and air bases of Petsamo and Kirkenes.

1944, April 8–May 9. The Crimea. The Germans, after halting the first Soviet attack at the Perekop Isthmus, were forced back into Sevastopol's fortifications by General **F. I. Tolbukhin**'s Fourth Ukrainian Front, following an amphibious assault across the Kerch Strait. A 2-day assault, with heavy artillery support, cleared **Sevastopol** (May 9), but most of the German garrison was successfully evacuated by water.

1944, July 10–August 7. Drive into Poland. Methodically advancing on a widening front, Zhukov's masses enlarged both flanks of the gap, at the same time pressing on the main axis toward Warsaw. On the northern flank, a deep penetration toward Riga rolled up German Army Group North, threatening to pin it back against the Baltic Sea. Model scraped up sufficient reserves to counterattack and check the advance of Rokossovski's First White Russian Front just east of Warsaw, but farther south Konev's First Ukrainian Front surged through Lwow (July 27) to reach the upper Vistula at Baranov (August 7). The 450-mile advance by this time had overstrained Soviet supply capabilities, and the offensive on this front came to a temporary halt.

1944, August 1–September 30. Warsaw Revolt. Led by General **Tadeusz Bor-Komorowski,** Polish underground forces (anti-Communist) attempted to wrest the city from German control, hoping the Russians, just across the Vistula, would help them. But the Soviets lay there idle while a German SS force squelched the revolt in a bloody 2-month house-to-house battle.

1944, August 20–September 14. Conquest of Rumania. The Second and Third Ukrainian Fronts attacked across the Prut River, falling on General **Johannes Friessner**'s Army Group South Ukraine. Two of its 4 armies—Rumanian troops—allied themselves with the Soviets when Rumania capitulated (August 23); most of the German Sixth and Eighth armies were trapped. Soviet troops reached the Danube at Bucharest (September 1), having captured about 100,000 prisoners and much matériel. The entire German right flank collapsed, to reform in the Transylvanian mountains.

1944, September 8. Defection of Bulgaria. Bulgaria changed sides in the war when Soviet troops crossed the Danube.

1944, October 10–December 15. Drive to the Baltic. Despite efforts of Guderian (now German chief of staff) to pull Schoerner's Army Group North from its dangerous position in Latvia, Hitler delayed the movement until too late. The Soviet First Baltic Front drove through to the sea, investing Memel and barring Schoerner's retreat. However, a Russian assault into East Prussia was halted by counterattacks.

1944, October 20–December 31. The Balkans. Russian efforts to block movement of General von Weichs' Army Group F, moving from Greece into Yugoslavia to bolster the German right, were nearly successful. Tolbukhin's Third Ukrainian Front, with a Bulgarian army assisting on its left, took **Belgrade** (October 20), with **Tito**'s (**Josip Broz**'s) partisans fighting beside them. This forced Weichs to move through Sarajevo, to the west. He then linked with Friessner's Army Group South along the Drava, momentarily saving the German flank. The Russians, continuing northwest, reached the Danube and won a bridgehead (November 24). **Budapest,** encircled (December 24), was still holding out as the year ended.

COMMENT. *Again and again, Hitler, despite his generals' entreaties, prevented withdrawals and regroupings which would have improved his defensive capabilities. He resisted evacuating Greece until too*

late for Army Group F to take any but a minor defensive role in Yugoslavia. He bled white his Panzer strength by transferring its pick to the Western Front for the abortive Ardennes offensive (see p. 1217), and kept the 20 veteran divisions of Army Group North, a splendid reserve mass of maneuver, penned in Latvia. Not the least of his erratic mistakes was to shift generals continuously between commands, as exemplified by transferring Model—his efficient troubleshooter—back to command in the West (August 25).

War in the West, 1945

Battle of the Atlantic

1945, January–April. U-Boat Resurgence. Doenitz sent his new schnorkel-equipped submarines out into the Atlantic. Germany was producing approximately 27 per month, despite Allied air attacks on the submarine industry. U-boats accounted for the loss of 253,000 tons of shipping, much of it in British waters.

1945, April–May. Allied Countermeasures. A double screen of U.S. destroyer escorts and carriers patrolling the Atlantic north of the Azores stamped out the final German effort. The last action in the Atlantic was the sinking of *U-853* by U.S.S. *Atherton* and *Moberly* off Block Island (May 6).

1945, May 28. Abolition of Convoys. A joint Admiralty—U.S. Chief of Naval Operations announcement so declared, adding that all merchant ships "at night will burn navigation lights at full brilliancy and need not darken ship." The order applied to the North and South Atlantic, the Arctic and Indian oceans. In the Pacific Ocean areas, of course, the war against Japan was still on.

COMMENT. *In all, 781 U-boats were destroyed by Allied naval and air efforts during the war, with loss of 32,000 German sailors. The submarines had taken toll of 2,575 Allied and neutral vessels, causing more than 50,000 Allied casualties, about three-fourths British. At the end, 398 U-boats were still in commission. Of these, 217 were destroyed by their own crews, and the others surrendered.*

The Combined Bomber Offensive

The British and American bombing attacks (alternating night and day as in previous years) mounted in intensity and effectiveness while German air defense efficiency declined as a result of the terrible attrition. Nevertheless, the Luftwaffe continued to fight vigorously, and the appearance of the Messerschmitt 262 twin-jet fighters early in the year partially redressed the balance because of their superior performance. But the German switch to jet fighters came too late to affect the outcome of the air war. Superior numbers of conventional planes, and the superior training and operational efficiency of the Allied pilots—who had no fuel shortage to worry about—prevented the new Messerschmitts from seriously threatening Allied air superiority.

1945, February 13–14. The Dresden Raids. An RAF night attack, followed next day by a massive U.S. Eighth Air Force raid, created uncontrollable fire storms; at least 100,000 people perished in the most destructive bombardment of history.

1945, March 21–24. Crushing the Luftwaffe. Partly in preparation for the Montgomery Rhine crossing at Wesel (see p. 1226), and partly as a culminating blow of the strategic air offensive, Allied strategic and tactical air forces flew a total of 42,000 sorties over Germany from bases in England, France, Italy, and Belgium. More than 1,200 heavy Eighth Air Force bombers smashed German jet bases within range of Wesel, while medium bombers and fighter bombers struck at all other Luftwaffe installations. This, combined with the collapse of the German ground front, ended further effective German air activity.

1945, April–May. Support of the Ground Offensive. The Strategic Air Forces had practically run out of targets. The few remaining operational German factories were within easy range of tactical air forces. Air Chief Marshal Harris and General Spaatz shifted their heavy bombers to direct support of the onrushing British and American armies.

Operations in Italy

1945, January–April. Continued Stalemate. German General **Heinrich S. von Vietinghoff** (Kesselring had been transferred in March to command the defense of western Germany) labored to strengthen the Gothic Line positions of what was now German Army Group Southwest. He wanted to retire north of the Po, but Hitler harshly refused permission. Despite Allied air superiority, reduced strength, and short supplies, German morale remained high in their deep fortified zone across the peninsula. To the west, from Monaco north to the Swiss border, Graziani's Fascist Italian Ligurian Army defended the Alpes Maritimes, a force of doubtful value, except for 2 German divisions.

The polyglot Allied 15th Army Group, reorganized and reequipped, prepared for a vigorous offensive. Alexander (theater commander) and Clark (army group commander) proposed a double penetration of the Gothic Line, British Eighth Army (Richard McCreery) on the right driving on Ferrara and U.S. Fifth Army (Truscott) on Bologna. It was in effect a one-two assault, the British jumping off first, the Americans following 5 days later, with air support massed in that same order. Several probing attacks, including an amphibious feint at the mouth of the Po, preceded.

1945, April 9. Eighth Army Assault. Accompanied by massive air and artillery blows, the British infantry attack struck the German Tenth Army, flame-throwing tanks in the lead. A small amphibious assault across Lake Comacchio on the extreme right enveloped the German left, and the assault moved into the Argentia Gap, southeast of Bologna.

1945, April 14–20. Fifth Army Offensive. With the weight of air support now shifted to the west, the Americans sliced into the German position. They soon broke into the open Po Valley (April 20). Vietinghoff, committing his last reserves, failed to stem the tide. German resistance collapsed as American armor pressed forward. While most of the German troops managed to cross the Po, practically all heavy equipment was abandoned.

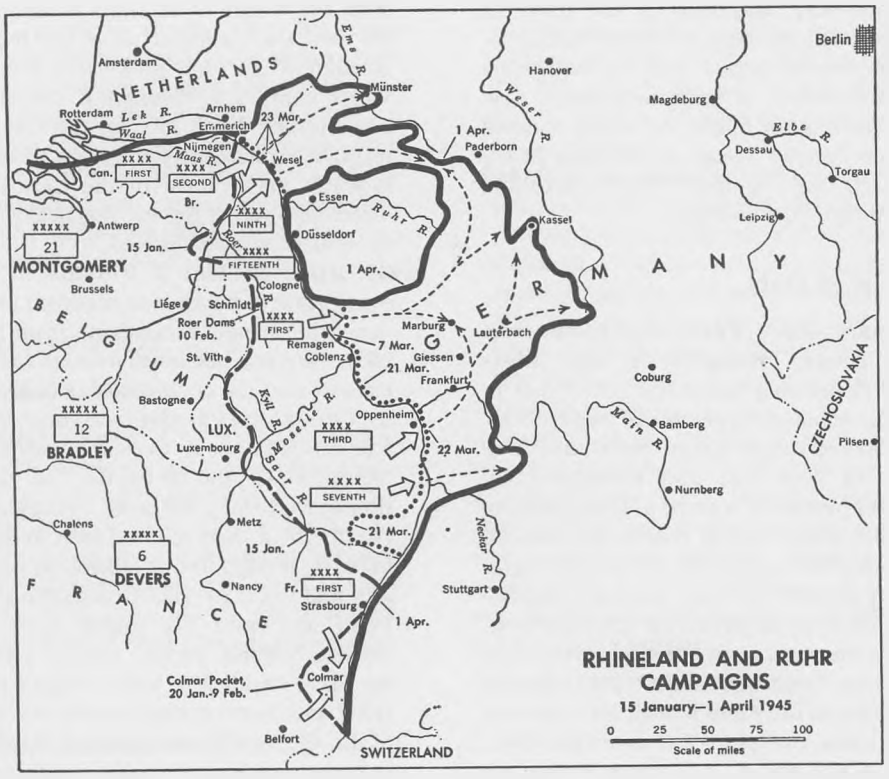
1945, April 20–May 2. Pursuit. In the Fifth Army zone, Bologna was occupied (April 21). American armor, debouching from the main effort, now reached north through Milan, up to Lake Como, and encircled Lake Garda. Behind the German lines partisans captured Mussolini, attempting to flee to Germany, and killed him (April 28). On the far left the U.S. 92nd Division moved along the coast, occupying Genoa (April 28). It then reached west to meet, near Imperia, French troops advancing from Monaco, and north to take Alessandria (April 28), Turin, and Pavia. The Eighth Army's pursuit reached Verona, Padua, Venice, and crossed the Piave (April 29). Italian Fascist resistance faded, prisoners coming in in droves. Remnants of the German Fourteenth and Tenth Armies streamed north up the Adige and Piave valleys. General Vietinghoff at Caserta agreed (April 29) to unconditional surrender, effective May 2, and American spearheads moved into the Brenner Pass, linking (May 4) at Vipiteno with U.S. Seventh Army elements driving down from the north. New Zealand units of the Eighth Army had already rounded the northern tip of the Adriatic to take Trieste (May 2).

COMMENT. *In marked contrast to all previous operations of the 15th Army Group, the breaching of the Gothic Line and the subsequent pursuit of the broken German armies was tactically superb. Truscott's employment of the Fifth Army was particularly noteworthy.*

The Western Front

Advance to the Rhine

1945, January 1–21. German Offensive in Lorraine and Alsace. To take advantage of



shifting of Allied troops to meet the German Ardennes offensive, General **Johannes von Blaskowitz'** Army Group G launched a vicious drive against the extended U.S. Seventh Army in Devers' 6th Army Group. Before it was snubbed (January 21), Patch's troops had been forced back from their Rhine Valley salient near Karlsruhe to previously prepared positions stretching from Sarreguemines to Gambsheim, north of Strasbourg. De Gaulle, fearful of the effect on French morale should Strasbourg be evacuated, insisted the city be defended. Accordingly Eisenhower, who was prepared to give ground there, ordered Devers to hold it at all costs. He did. The German advance bogged down.

1945, January 17–February 7. Allied Advances in the North. Eisenhower prepared to resume his offensive to clear the left (west) bank of the Rhine. As preliminary, Montgomery's 21st Army Group pressed into the Roermond area (January 15–26) and Bradley's 12th Army Group approached the upper Roer.

1945, January 20–February 9. End of the Colmar "Pocket." Devers threw the French First Army—reinforced by American divisions—against the Colmar "pocket" in the Vosges. The German Nineteenth Army was pinched out with heavy losses. The Allied southern flank was now solidly on the left bank of the Rhine from the Swiss border to Gambsheim, north of Strasbourg.

1945, February 8–March 10. Clearing the Rhineland—21 Army Group Sector. Montgomery launched a pincers move. Crerar's Canadian First Army attacked (February 8) southeasterly between the Maas (Meuse)—held all the way south to Roermond by Dempsey's Second British Army—and the Rhine. But the Canadians could make only slow progress over water-soaked terrain and in foul weather, and Simpson's Ninth Army attack

across the Roer was held up by floods when the Germans suddenly emptied the Roer dams down the valley. His delayed assault (February 23) was most successful. Five days later his troops broke out into the open. The pincers met at Geldern (March 3), and German resistance began collapsing. The last German bridgehead, opposite Wesel, was wiped out (March 10) by the Canadians. Montogomery's armies stood on the Rhine.

1945, February 9–March 10. Clearing the Rhineland—12th Army Group Sector. Hodges' U.S. First Army, pushing through the Hürtgen Forest, protected Simpson's right flank and drove for the Rhine, rolling up Manteuffel's Fifth Panzer Army and remnants of Zangen's Fifteenth Army. Cologne was cleared (March 6–7) and task forces began probing south to contact Patton's Third Army. Patton, construing his mission of "active defense" as one of incessant attacks, had been battering his way through the rugged Eifel region, clearing the Westwall defenses from the Losheim Gap south to the Moselle. With Trier captured (March 5), his armored spearheads struck northeastward through disorganized German defense, the U.S. 4th Armored Division reaching the Rhine opposite Neuwied (March 7).

1945, March 7. The Remagen Bridge. A 2-battalion task force of the U.S. 9th Armored Division, probing east as part of the First Army's advance, unexpectedly found the Ludendorff Railroad Bridge over the Rhine, at Remagen, still standing. Daringly seizing it before it could be blown up, these Americans changed the entire course of Eisenhower's planned campaign. By nightfall the First Army held a rapidly swelling bridgehead on the east bank. Hitler, making another inept shuffling, displaced Rundstedt from the western command, putting Kesselring in his place (March 10).

1945, March 11–21. Clearing the Palatinate. While the First Army enlarged the Remagen bridgehead against a series of frantic piecemeal attacks, accompanied by heavy air, artillery, and V-2 bombing strikes against the original span and new bridges being thrown over the Rhine, a dazzling multipronged armored assault crushed the last remaining German forces west of the river. Patton's Third Army, driving southeast across the Moselle, and Patch's Seventh Army of Devers' 6th Army Group, attacking northeast from the Saar, each covered by its tactical air command, destroyed the dazed elements of General Brandenberger's German Seventh Army in an amazingly coordinated crisscross operation. Except for a quickly melting bridgehead held by General **Hermann Foertsch's** German First Army opposite Karlsruhe, the AEF lay solidly along the Rhine from Holland to Switzerland, with its Remagen bridgehead on the east bank now some 20 miles long, 8 miles deep, and linked by 6 bridges. The Rhineland campaign cost the Germans some 60,000 men killed or wounded and 250,000 taken prisoner, together with great quantities of matériel. Allied losses were less than 20,000.

The Rhine Crossings

Eisenhower, realizing that offensive operations would be much easier in the open North German Plain than in the mountainous region south of the Ruhr, had planned to have Montgomery's 21 Army Group make the main assault into the heart of Germany. Bradley's and Devers' army groups were to play secondary roles. The unexpected Remagen bridgehead had only partly changed this plan. To oppose 85 well-equipped, well-supplied Allied divisions, Kesselring now had east of the Rhine less than 60 half-strength divisions, short of equipment, weapons, fuel, and ammunition. However, they were defending their homeland.

1945, March 22. Oppenheim. Unexpectedly, Patton (who had long planned the move and brought bridging equipment and a navy detachment with landing craft in his army train) threw the U.S. 5th Division across the Rhine against negligible opposition. Neither air nor

artillery support was used in this brilliant surprise assault. His losses were but 34 men killed or wounded. Forty-eight hours later, his bridges were completed, 4 divisions were across, armor was moving over, and another bridge at Boppard, 40 miles to the north, was also in being. Four days later, his spearheads reached Lauterbach, 100 miles east of the Rhine.

1945, March 23. Wesel. One day behind Patton, Montgomery launched his long-planned full-dress Rhine crossing north of the Ruhr. The British Second Army led off, behind the support of some 3,000 guns on a 20-mile front, and a heavy air attack (see p. 1222). The U.S. Ninth Army began its crossing at Dinslaken (March 24), while a daylight drop of 2 airborne divisions—U.S. 17th and British 6th—landed north of Wesel. German resistance was fierce but relatively ineffective. Montgomery's army group soon was pouring over 12 bridges (March 26) and 2 days later had broken through a final German stand at Haltern on the Lippe River.

1945, March 25. Remagen. Hodges' First Army broke out of its bridgehead and its armored spearheads reached Marburg, some 70 miles to the east (March 28).

1945, March 26. Worms-Mannheim. Devers' 6th Army Group began to move across the river. The Seventh Army crossed in the Worms-Mannheim area. De Lattre de Tassigny's First French Army soon followed at Gersheim (March 31).

The German Collapse

1945, March 28. Eisenhower's Change of Plan. Because of the dramatic and unexpected success of Patton's and Hodges' armies, Eisenhower decided to have Bradley's 12th Army Group make the main effort, driving east through central Germany on Leipzig, forgetting Berlin, toward which the Russians were advancing from the east (see p. 1228). Bradley's left and Montgomery's right (U.S. Ninth Army) would encircle the Ruhr, while the remainder of 21 Army Group covered the main advance by moving northeast on Hamburg and the Elbe. The advance would halt on the Elbe. SHAEF was concerned by the threat (later proven a fable) that a Nazi last-ditch guerrilla resistance—the "Werewolves"—would operate from a nebulous "National Redoubt" in the German-Austrian Alps. So while Montgomery and Bradley were to close and await the Russians on the line Elbe-Mulde-Erzgebirge, Devers' 6th Army Group would move down the Danube Valley to squelch all resistance. Eisenhower's decision to turn from what he considered to be a political objective—Berlin—to the apparently more immediate military objective of crushing the last dregs of Nazi armed force was received with bitter criticism by the British. The military and political issues and considerations were complex and confused. In retrospect, Eisenhower's decision appears to have been faulty, but it was evidently consistent with guidance from U.S. Army Chief of Staff General Marshall.

1945, March 28–April 18. Ruhr Encirclement. Armored spearheads of the Ninth and First armies met at Paderborn (April 1). The Ninth Army returned to Bradley's control. Rushing eastward, the Ninth Army reached the Elbe near **Magdeburg** (April 11), and encountered fierce resistance as it closed up to the river to north and south. The First Army's main thrust reached Warburg (April 4). That day Patton's troops were sweeping through the Thuringian Forest, nearly 150 miles east of the Rhine. In Devers' group, the U.S. Seventh Army was on the Main, and the French First Army was reaching through the Black Forest. Behind all, the newly organized U.S. Fifteenth Army, under Lieutenant General **Leonard T. Gerow,** was sealing the western face of the Ruhr area along the Rhine. Inside the 4,000-square-mile area of the Ruhr pocket were crowded more than 300,000 men—mostly the disorganized bulk of Model's Army Group B. To the north Blaskowitz' broken Army Group H was reeling back into Holland and northwest Germany, while to the east and south Army Group G (now under SS General **Paul Haus-**

ser) was putting up disorganized but often bitter resistance. Kesselring watched helplessly, having neither means nor communications to regroup or establish any covering force, while Hitler in Berlin kept thundering his usual senseless "hold in place" directives. Model, inside the pocket, conducted his typical skillful delaying resistance to the closing ring until simultaneous drives from north and south split his forces (April 14). In the face of a preposterous demand from Hitler that he now cut his way out, Model disbanded his troops and disappeared—apparently having committed suicide. Four days later the last resistance dissolved; some 317,000 German soldiers had entered Allied prison camps. The once mighty Wehrmacht was collapsing, although disjointed fanatical opposition was still stiff in places.

1945, April 18–May 7. Final Operations—21 Army Group Sector. In Holland, the Canadian First Army suspended hostilities in a partial truce, Blaskowitz agreeing to cease flooding the country and to permit food to reach the starving population; however, he still refused to surrender. The British Second Army reached the west bank of the Elbe (April 26); Lubeck and Wismar to the north were occupied (May 2); contact with advancing Russians was made the same day. Hamburg surrendered (May 3).

1945, April 18–May 7. Final Operations—12th Army Group Sector. The First Army crushed a determined pocket of resistance in the Harz Mountains area (April 14–21). Closing on the Mulde and Elbe rivers, Hodges's troops made the first contact with Soviet troops from the east at Torgau (April 25). The Allied front now froze on the Mulde-Elbe-Erzgebirge line, while the Third Army swept down the Danube Valley to occupy Linz (May 5). Its left, in Czechoslovakia, reached Pilsen (May 6) and moved on Prague until halted by SHAEF order next day.

1945, April 18–May 7. Final Operations—6th Army Group Sector. The U.S. Seventh Army, after a sharp struggle at Nuremberg, advanced southeast to force a crossing of the Danube, taking Berchtesgaden (Hitler's mountain retreat) and Innsbruck, and meeting in the Brenner Pass elements of the U.S. Fifth Army moving north from Italy. The Seventh Army's movements had been hampered by an annoying clash between Americans and French over Stuttgart. The squabble ended only when U.S. military authorities threatened to cut off further supply to French troops. Meanwhile, de Lattre's spearheads mopped up the Black Forest to the Swiss border.

1945, May 5–7. German Dissolution. Blaskowitz formally surrendered all German forces in Holland, Denmark, Schleswig-Holstein, and northwest Germany, together with the coastal islands, to Montgomery. On the southern flank, General Schulz surrendered Army Group G to Devers. Droves of individual German soldiers fled west over the Elbe from the Russians to surrender to the nearest Anglo-American units. Doenitz, successor to Hitler (see p. 1228), sent emissaries to Eisenhower at Rheims to negotiate final surrender of the Third Reich.

1945, May 7–8. Unconditional Surrender. Admiral **Hans von Friedeburg** and General **Alfred Jodl,** representing Doenitz, surrendered to Eisenhower—represented by his chief of staff, Lieutenant General **Walter Bedell Smith.** Next day, in Berlin, Marshal Keitel, Admiral Friedeburg, and Air General Hans-Jürgen Stumpff ratified the surrender to Soviet Zhukov and Tedder, Eisenhower's Deputy Supreme Commander. World War II in the West officially ended at midnight May 8–9, 1945.

The Eastern Front

Soviet Winter Offensive

1945, January 12–February 16. Drive into Germany. From the Baltic to the Carpathians, the front exploded, Konev's First Ukrainian Front on the left leading, the army groups to his right unfolding in turn (Zhukov's First White Russian; Rokossovski's Second White Russian; **Ivan Chernyakovski's** Third White Russian; **Ivan K. Bagramyan's** First Baltic; and Andrei Yeremenko's Second Baltic). Vastly outnumbered and lacking any secondary defensive

preparations, the Germans fell back, with the isolated fortresses of Torun (Thorn), Poznan (Posen), and Breslau still battling in their rear. Zhukov's First White Russian Front reached the Oder River near Kustrin (January 31) after an advance of nearly 300 miles; Konev, to his left, gained the Oder-Neisse line (February 15). There the advance halted, its long communications lines strained beyond capacity. The invading tide turned north, where the Germans were pinned against the Baltic in 2 isolated areas—Army Group Center in East Prussia and Army Group Kurland (formerly Army Group North) in Latvia.

1945, January 12–April 16. The Danube Valley. South of the Carpathians the advance of the three Soviet fronts or army groups (**Ivan Petrov**'s Fourth Ukrainian; Malinovski's Second Ukrainian; and Tolbukhin's Third Ukrainian) was blocked at Budapest for more than a month. Completely surrounded, the city finally fell (February 13). Hitler, in a desperate effort to protect the Lake Balaton oil fields, ordered the rehabilitated Sixth Panzer Army into the area from the Western Front. Its counterattack (in March) checked the valley advance, but died when fuel gave out. Malinovskiy's Second Ukrainian Front then drove into Vienna (April 15).

1945, February 16–April 15. The Baltic Coast. Zhukov's army group and Rokossovski's Second White Russian Front moved north from the Oder near Stettin up to Königsberg, while Bagramyan, now commanding the Second Baltic Front, blocked the Kurland peninsula. More than 500,000 German troops were cut off, but not isolated, thanks to the German Navy's continuing control of the Baltic Sea. An estimated million and a half fugitives and 4 army divisions were evacuated from Kurland, including 157,000 wounded. In turn, Danzig and Gdynia (March), Königsberg and Pillau (April 25), and Kolberg (mid-April) were successfully evacuated by the German Navy. In these operations Allied air power slowly nibbled away German naval strength. By April only the cruisers *Prinz Eugen* and *Nürnberg* were still afloat. But the task had been accomplished.

COMMENT. *The last stand of the German Navy in the Baltic presents an example of the value of sea power; a small, well-led, and well-trained squadron, in confined waters and without adequate air support, long denied victory to a more powerful enemy unfamiliar with the sea.*

1945, April 16–May 7. The End in Europe. For the final offensive against Berlin, General **Vassili Sokolovski** took over command of the First White Russian Front from Zhukov, who commanded a super army group of Konev's and Sokolovski's two fronts. The resumed Soviet northwest advance, despite desperate but scattered resistance, reached Berlin (April 22) and surrounded it (April 25). That same day, elements of Bradley's 12th Army Group and Konev's First Ukrainian Front made contact at Torgau on the Elbe. Farther north, Rokossovski, who had captured Stettin (April 26), made contact with American units of Montgomery's 21st Army Group at Wismar (May 3). In Berlin, meanwhile, Hitler—after appointing Doenitz as his successor—had committed suicide (April 30) before the Soviets, after desperate street fighting, finally stamped out all resistance (May 2). Farther south, Malinovskiy's Second Ukrainian Front was nearing Patton's advance down the Danube near Linz, and at Trieste the British Eighth Army had met Tito's partisans (May 1).

Russian estimates (probably correct) of German losses in the east during the last 3 months of the war were 1 million killed; 800,000 men, 6,000 aircraft, 12,000 tanks, and 23,000 guns were captured.

COMMENT. *Simpson's Ninth U.S. Army was on the Elbe, 60 miles west of Berlin, 5 days before the Russian offensive began, and 2 weeks before they surrounded the city. Since the Ninth Army had moved more than 120 miles in the previous 10 days, many critics assume that it could easily have reached and captured Berlin before the Russians.*

WORLD WAR II IN ASIA AND THE PACIFIC

The Early Years, 1937–1941

1931–1937. Background. Japan had been pursuing a policy of aggressive expansion and domination in China (see pp. 1142–1146).

1937, July 7. Beginning of the "China Incident." Japanese troops in North China, ostensibly on night maneuvers, clashed with Chinese troops near the Marco Polo Bridge at **Lukouchiao,** near Peiping. This affair initiated a full-scale invasion of China, which the Japanese termed the "China Incident." It may be considered as the start of World War II.

The Opponents. Generalissimo Chiang Kai-shek's National Government Army consisted of approximately 2 million poorly trained, poorly equipped troops. In addition, the Chinese Communist Army, in northwest China, then comprising about 150,000 guerrilla troops, nominally supported Chiang against the Japanese. The National Government supported 45,000 of these in a newly created Eighth Route Army, under Chu Teh. China had no navy, only a handful of outmoded aircraft with relatively inexperienced Chinese and foreign mercenary pilots, and no trained reserves existed. China's industry was incapable of supporting a major war effort.

The regular Japanese Army consisted of about 300,000 soldiers, equipped with the most modern military weapons. There were also about 150,000 moderately well-trained and equipped Manchurian and Mongolian troops under Japanese officers. There were more than 2 million trained reserves in Japan. The Japanese Navy was the third largest in the world and in many respects the most modern. The air forces of both army and navy were equipped with modern aircraft and manned by competent airmen. Japan was a modern industrial nation, capable of turning out great quantities of excellent war materiel.

1937, July–December. Operations North of the Yellow River. Japanese troops quickly captured Peiping (July 28) and Tientsin (July 29). In subsequent months the Japanese advanced west and south against relatively ineffective Chinese opposition to conquer Chahar and part of Suiyuan, reaching the upper bend of the Yellow River at Paotow. Their principal efforts, however, were southward down the railroad lines toward Nanking, Hankow, and Sian. Increasing effectiveness of the Chinese Army, growing unrest and resistance among the Chinese in the heavily populated conquered areas, and the long-distance logistical problems slowed the advance during the fall. The main Japanese drive, however, culminated in the capture of Tsinan, capital of Shantung (December 27). This gave them control of most of the area north of the Yellow River.

1937, August 8–November 8. The Second Battle of Shanghai. **(See p. 1145.)** Chinese resistance against an amphibious Japanese assault was as tenacious as it had been more than 5 years earlier. Japanese reinforcements were rushed to Shanghai to avoid defeat. Despite savage air bombardment and effective naval gunfire support, for several weeks the Japanese were pinned to their beachheads at the outskirts of the city. Finally, after 2 months, additional Japanese reinforcements permitted amphibious landings north and south of Shanghai, and they finally drove out the shattered defenders.

1937, September 25. Battle of P'inghsinkuan. The Japanese 5th Division, under General **Seishiro Itagaki,** was ambushed and defeated in the Wutai Mountains of northern Shansi by the Chinese 115th Division (Communist, of the Eighth Route Army), under General **Nieh Jung-chen.** This victory had great propaganda significance throughout China. It was the first and last division-sized engagement fought by the Chinese Communists during the war.

1937–1940. Communist Consolidation. They spent the next three years expanding and consolidating their control of northwest China, and establishing guerrilla bases behind the

Japanese lines. The Eighth Route Army made only a few minor raids against the Japanese front-line forces.

1937, November–December. Japanese Pursuit toward Nanking. The Japanese troops that captured Shanghai advanced up the Yangtze River toward the Chinese capital, meeting ineffectual resistance.

1937, December 12. The *Panay* Incident. Japanese aircraft made an unexpected and unprovoked attack on British and American gunboats moored in the river, near Nanking. The USS *Panay* was sunk by repeated dive bombings; the British vessel was badly damaged. The American public was outraged, but Japan later apologized and paid an indemnity.

1937, December 13. Fall of Nanking. The city was ravaged by Japanese troops for several days in a senseless orgy of slaughter, rape, and destruction. Chiang Kai-shek had meanwhile moved his capital westward to Hankow. To the surprise of the Japanese and of the rest of the world, the National Government did not collapse; and despite heavy military losses, both the Chinese Army and the Chinese people developed an amazing will to resist, and a moral unity.

1938, January–April. Renewed Offensive in the North. Completing the conquest of Shantung (January), the Japanese resumed their drive down the railroads toward Nanking and Hankow. Their advance was slow but steady; effective action by mobile Chinese regular forces and local guerrillas restricted their control to the vicinity of the railroad.

1938, April. Battle of Taierchwang. Chinese regular forces and guerrillas, under General Li Tsung-jen, probably exceeding 200,000 in numbers, cut off and surrounded a Japanese force of 60,000. Initial Japanese efforts to fight their way out were repulsed, and losses were heavy on both sides. The Japanese finally fought their way out to the north, but left 20,000 dead and large quantities of equipment behind them. This victory greatly bolstered Chinese morale, but had no lasting effects.

1938, May–June. Japanese Recovery. The Japanese quickly regrouped, reorganized, then renewed their attacks from the north, while another column moved up the railroad from Nanking. Hsuchow was captured (May 20); Kaifeng fell soon afterward (June 6). By the end of the month the Japanese had complete control of the Peking-Nanking railroad.

1938, May. Establishment of the New Fourth Army. Chiang Kai-shek agreed to support another Communist army in east-central China, mostly behind the Japanese lines south of the middle Yangtze. The commander was **Yeh T'ing.**

1938, June–July. Japanese Failure at Chengchow. The Japanese now advanced westward from Kaifeng to seize the important railroad junction of Chengchow, preparatory to an advance down the railroad to Hankow. The Chinese broke the Yellow River dikes, flooding the countryside and shifting the entire river course to a former bed, emptying into the Yellow Sea hundreds of miles from its recent mouth in the Gulf of Chihli. The Japanese advance was completely halted by this manmade catastrophe. Many troops were drowned, supplies destroyed, tanks, trucks, and guns covered with water or bogged down in the mud. The offensive was canceled.

1938, July–October. Renewed Advance on Hankow. Shifting their axis of advance farther south, the Japanese again began to threaten Chiang's capital, this time from the east, up the Yangtze River. Determined Chinese resistance resulted in the bloodiest fighting of the war in China. The Japanese, supported by their unopposed air force, captured the city (October 25). Chiang again shifted his capital westward up the Yangtze, this time to Chungking in mountainous Szechwan.

1938, October. Capture of Canton. Japanese amphibious forces landed near Hong Kong (October 12), then advanced inland to seize Canton (October 21). They now controlled China's two principal seaports.

1939. Revised Japanese Strategy. Japan, frustrated by inconclusive war and the problems of controlling a hostile population in occupied China, decided to shift to a strategy of attrition in China, which continued for several years. In

1939 they captured Hainan Island and most of China's remaining seaports, hoping to cut off all foreign supplies from China and thus force the collapse and surrender of Chiang's government. The Chinese, however, were able to keep open 2 supply routes, by means of which they could still obtain a trickle of military supplies. One was along the narrow-gauge railway from Haiphong, in French Indochina, to Kunming. The other was through British Burma, then over the narrow, twisting Burma Road to Kunming.

1940, March 30. Establishment of Puppet Chinese Government. The Japanese installed respected politician **Wang Chingwei** at Nanking as puppet ruler of occupied China. Their hopes that this government would obtain support of some of Chiang's followers were not fulfilled.

1940, June 25. Preliminary Moves in Indochina. Taking advantage of France's defeat in Europe, Japan demanded and received from the Vichy government the right to land forces. The arrival of Japanese warships in French Indochinese ports soon closed the Haiphong-Kunming supply route.

1940, July 18. Closing of the Burma Road. Hard-pressed by Germany, Prime Minister Churchill's British government acceded to Japanese demands for closing of the Burma Road. China was now virtually isolated, but Chiang and his people remained steadfast.

1940, August 20–November 30. Communist "Hundred Regiments Offensive." An intensive series of small-scale guerrilla raids ordered by Mao Tse-tung was carried out in Shansi, Chahar, Hopeh, and Honan. These attacks against Japanese outposts, roads, and railroads were highly successful, and disrupted the Japanese rear areas.

1940, September 4. American Warning to Japan. Secretary of State **Cordell Hull** warned Japan of the unfavorable reaction which would be aroused in the U.S. by aggressive moves against French Indochina.

1940, September 22. Japan Begins Occupation of Indochina. Japanese troops began to occupy northern Indochina. Air bases were established and ground forces began an offensive into China.

1940, September 26. American Embargo on Steel for Japan. President Roosevelt ordered an embargo on shipment of scrap iron and steel from the United States to Japan. Japan declared this to be an "unfriendly act" (October 8).

1940, September 27. Establishment of the Rome-Berlin-Tokyo Axis. **(See p. 1165.)**

1940, October 18. Reopening of the Burma Road. With encouragement from the U.S., which wished to be able to ship Lend Lease materials to China, and with the immediate German threat to Britain removed, Churchill reopened the Burma Road.

1941–1943. Japanese Reprisals against the Communists. In reprisal against the "Hundred Regiments Offensive" (see above) the Japanese began a series of savage punitive raids against the Chinese Communists. During 3 years, the Communist Eighth Route Army was constantly on the defense and lost about 100,000 casualties.

1941, January 1–7. Anhwei Incident. Chiang Kai-shek had ordered (December, 1940) the Communist New Fourth Army, operating south of the Yangtze in Anhwei, to operate against Japanese troops north of the river. The army commander Yeh T'ing ignored the order, which was apparently not consistent with his instructions from Mao Tse-tung in Yenan. Chiang repeated the order, and threateningly moved Nationalist troops to the vicinity. The Communists slowly began to cross (late December). When only 10,000 of New Fourth Army, including headquarters, remained south of the river, this element was attacked by the Nationalists; all Communists were killed or captured. Yeh T'ing was wounded and captured. Communist-Nationalist relations were greatly embittered by this incident. Mao appointed **Chen Yi** as new commander of New Fourth Army.

1941, April 13. Japanese-Russian Neutrality Treaty. This assured Japan that she would not be involved in a war in Siberia should German threats against Russia materialize, and at the same time assured Stalin that in such an event he would not have to fight a 2-front war.

1941, July 26. "Freezing" of Japanese Assets in the U.S. This was in retaliation for the continuing and spreading Japanese occupation of Indochina. Britain soon followed suit.

1941, August 17. Renewed American Warning. President Roosevelt warned Japan that further attempts to dominate Asia would force the U.S. to take appropriate steps to safeguard American rights and interests. Meanwhile, in Washington, negotiations were going on between the U.S. government and the Japanese ambassador to find ways to reduce the growing tension between the 2 nations.

1941, September–December. The "Flying Tigers." With the tacit approval of the U.S. government, retired U.S. Army Air Force Captain **Claire L. Chennault,** now a colonel in the Chinese Air Force, established a mercenary organization known as the American Volunteer Group for service in China against Japan. The AVG, later dubbed "Flying Tigers," comprised about 100 trained U.S. airmen (formerly Army, Navy, and Marine Corps officers), plus American maintenance personnel, and were equipped with P-40 airplanes provided China under Lend Lease. Chennault trained his group in his own unique, revolutionary air tactical concepts and procedures at an abandoned RAF base at Toungoo in Burma.

1941, October 17. Tojo Becomes Premier. A new militaristic government came into power under Lieutenant General **Hideki Tojo,** supported by Japan's principal military men: Marshal **Hajime Sugiyama,** Chief of the Army General Staff, and Admiral **Osami Nagano,** Chief of the Naval General Staff.

1941, November 5. Promulgation of Secret War Plans. The Japanese Imperial General Headquarters issued a secret plan for simultaneous offensives against the U.S. Pacific Fleet at Pearl Harbor, British Malaya, the American Philippines, and the Netherlands East Indies, to secure the entire Southern Resources Area. The plan was to be implemented only if the continuing negotiations in Washington failed to reach an agreement satisfactory to Japan.

1941, November 15. Arrival of Special Japanese Ambassador Kurusu in Washington. Ambassador (Admiral) **Kichisaburo Nomura,** who had been conducting Japan's negotiations since February, was joined by special envoy **Saburo Kurusu.** They endeavored to obtain American agreement to reopen trade negotiations.

1941, November 26. Secretary Hull's Proposals. Mr. Hull stated that the basis of agreement would have to include Japanese withdrawal from French Indochina and China, and recognition of the National Government of Chiang Kai-shek. This being totally unacceptable to Japan, Tojo's government decided to initiate the war plan as quickly as possible, meanwhile pretending to continue negotiations in Washington to facilitate military surprise.

1941, December 7. Pearl Harbor; War with the U.S. **(See p. 1233.)**

The War Against Japan, December, 1941

Pearl Harbor and the Central Pacific

1941, November. The Japanese Strategic Plan. Japan realized that she could not match the industrial strength and resources of the Allies, or even of the United States alone. The Japanese believed that they could successfully employ, however, the same basic offensive-defensive strategic concept that had brought them victory over Russia in the Russo-Japanese War (see p. 1008). Their plan had 3 phases: Phase 1, neutralize the U.S. Pacific Fleet—the only major hostile force in the Pacific-East Asia region—by a surprise attack, while simultaneously seizing the Southern Resources Area and also strategic areas permitting establishment of a defensive perimeter around it; Phase 2, consolidate and strengthen the perimeter, so as to make any Allied attacks prohibitively costly; Phase 3, defeat and destroy any Allied efforts to penetrate the perimeter. The Japanese believed that the strength of their defenses, combined with the extremely long and vulnerable Allied lines of communications, would ensure success.

COMPARATIVE NAVAL STRENGTHS IN THE PACIFIC

December, 1941	*Japan*[a]	*United States*[b]	*British Empire*[c]	*Netherlands*	*Total Allied*
Battleships and Battle Cruisers	11[d]	9	2	—	11
Aircraft Carriers	11	3	—	—	3
Heavy Cruisers (8-inch guns or more)	18	13	1	—	14
Light Cruisers (6-inch guns or less)	23	11	7	3	21
Destroyers	129	80	13	7	100
Submarines	67	56	—	13	69

[a] Most Japanese ships were newer, faster, and more heavily armed than those of the Allies.

[b] These include the forces of the American Pacific and Asiatic Fleets. In addition, because of the threat of war against Germany's U-boat fleet, in the Atlantic the United States had 8 battleships, 4 carriers, 5 heavy cruisers, 8 light cruisers, 93 destroyers, and 56 submarines.

[c] Includes Australian and New Zealand vessels.

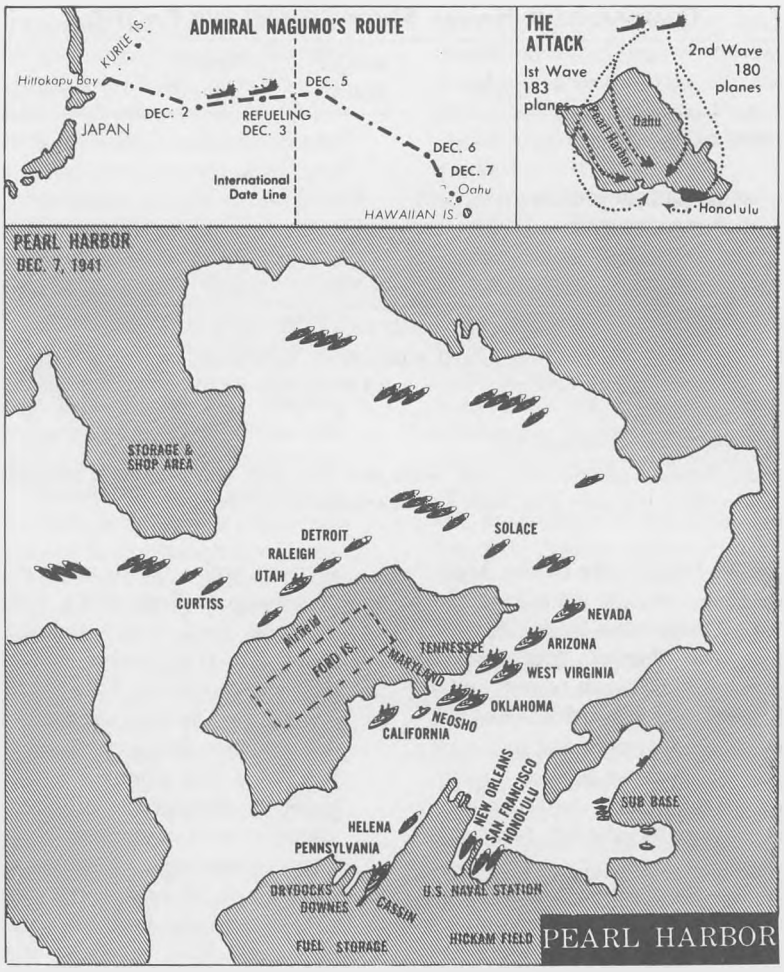
[d] Includes the *Yamato*, largest battleship ever built (with nine 18.1-inch guns, the most powerful in the world), completed in December 1941. Her sister ship, *Masashi*, was completed in July 1942.

1941, November 26. Departure of the Japanese First Air Fleet. Including 6 aircraft carriers, supported by battleships, heavy cruisers, and submarines, the fleet of Vice Admiral **Chuichi Nagumo** left the Kurile Islands under conditions of absolute secrecy (November 25, Washington time). He was informed by a code message at sea of the Japanese decision for war, and continued steaming east in accordance with the secret plan to strike the U.S. Fleet at its base at Pearl Harbor.

1941, November 26–December 7. American Readiness and Plans. Japan's preparations for war were well known to U.S. military and civilian authorities, who expected that the blow would fall on Malaya or the Philippines. U.S. intelligence, which had broken the Japanese secret radio code, was aware of the movements and location of most major Japanese army and navy units—with the notable exception of the First Air Fleet, which was moving under strict radio silence, while other radio stations in Japanese home waters simulated the call signals of the vessels of this fleet. (The Japanese did not guess that their secret messages were being decoded, but they knew that the intensity and origins of radio traffic were probably being monitored.)

1941, December 7. Pearl Harbor. In complete surprise, both strategic and tactical, 360 planes of Nagumo's fleet struck Oahu on Sunday morning, their targets the U.S. Pacific Fleet moored in Pearl Harbor and the military airfields on the island. Of the 8 battleships present, 3 were sunk, another capsized, and the remainder seriously damaged. Three light cruisers, 3 destroyers, and other vessels were also sunk or seriously damaged. On land, of 231 Army planes arrayed on airfields, only 166 remained intact or reparable; of Navy and Marine Corps planes, only 54 out of some 250 remained. Despite the surprise, both Navy and Army personnel fought back savagely. More than 3,000 Navy and Marine officers and men were killed and 876 wounded. Army losses were 226 killed and 396 wounded.

COMMENT. *The U.S. Pacific Fleet had been neutralized for at least a year to come. The fortuitous absence from Pearl Harbor of all 3 U.S. carriers of the fleet*—Enterprise, Lexington, *and* Saratoga—*alone prevented a major disaster from assuming the proportions of a national calamity. The issue of responsibility for the disaster has been controversial. However, both the U.S. Army Chief of Staff, General Marshall, and the U.S. Chief of Naval Operations, Admiral* **Harold R. Stark,** *had sufficient information, as a result of U.S. breaking of Japanese codes, to realize that war was imminent, and to recognize that an attack on*



Pearl Harbor was a distinct possibility. They failed to satisfy themselves that their subordinates in Hawaii were sufficiently alert. On the other hand, those subordinates, Lieutenant General **Walter C. Short** *and Admiral* **Husband E. Kimmel** *had been alerted; their failure to be ready was inexcusable. Both were relieved of their commands.*

The above comment on "U.S. breaking of Japanese codes" requires elaboration. In the late 1930s cryptographers of the U.S. Army Signal Corps were able to break the secret codes of the Japanese Government (which the Americans called "Purple,") by building a machine that was virtually identical to the machines used by the Japanese for encryption of their classified messages. Although totally unrelated, the process was similar to that used first by the Poles, then by the British, to break the German codes which used the "Enigma" machine. (See p. 1171; there was no relationship, other than incidental, in the Japanese development of the "Purple" machine and the German development of "Enigma"; nor was there any contact or collaboration between the American cryptographers and either the Poles or the British.) By 1939 the Americans were reading many messages of the Japanese Foreign Office, Army, and Navy. Like the Germans, the Japanese were so certain that their machine-

generated codes were unbreakable that, despite considerable evidence, during the war they never realized that their codes had been broken. This highly secret code-breaking process was known to the few people in the U.S. government who were aware of it, by the code-name ''Magic,'' and continued to be of great value to the U.S. Armed Forces throughout the war. After the U.S. entered the war, American ''Magic'' became very much intermingled with British ''Ultra.''

If the U.S. Government was reading the Japanese codes, one might ask, why were the Americans surprised by the Japanese attack on Pearl Harbor? In fact the ''Magic'' process put into the hands of a very few people in the U.S. Government, the secret instructions of the Japanese Government to its 2 ambassadors in Washington in late November and early December. President Roosevelt and Secretary Stimson probably read before the ambassadors did the instructions they received to break off negotiations on December 7. But those instructions did not mention either war or Pearl Harbor. And the Japanese fleet kept total radio silence. U.S. Government leaders recognized that war was about to break out, they knew that there were Japanese invasion fleets in the South China Sea, but did not suspect (although they should have) the threat to Pearl Harbor.

1941, December 8–23. Wake Island. A gallant defense by U.S. Marines and Navy personnel under Major **James Devereux** and Commander **Winfield Cunningham** repulsed one Japanese assault (December 11). A second assault overwhelmed the defenders.

1941, December 10. Guam. A Japanese landing quickly overwhelmed a handful of Marines and sailors.

Operations in Asia

Hong Kong

1941, December 8–10.* Invasion of Kowloon. The Japanese 38th Division smashed its way through the mainland defenses of the Hong Kong Colony. The British withdrew to Hong Kong Island.

1941, December 13. Japanese Demand for Surrender. The British commander, Major General **C. M. Maltby,** rejected the Japanese surrender demand. Japanese artillery, air units, and naval forces began an intensive bombardment of Hong Kong.

1941, December 18–25. The Assault. Amphibious landings on Hong Kong Island were resisted desperately but vainly by the British.

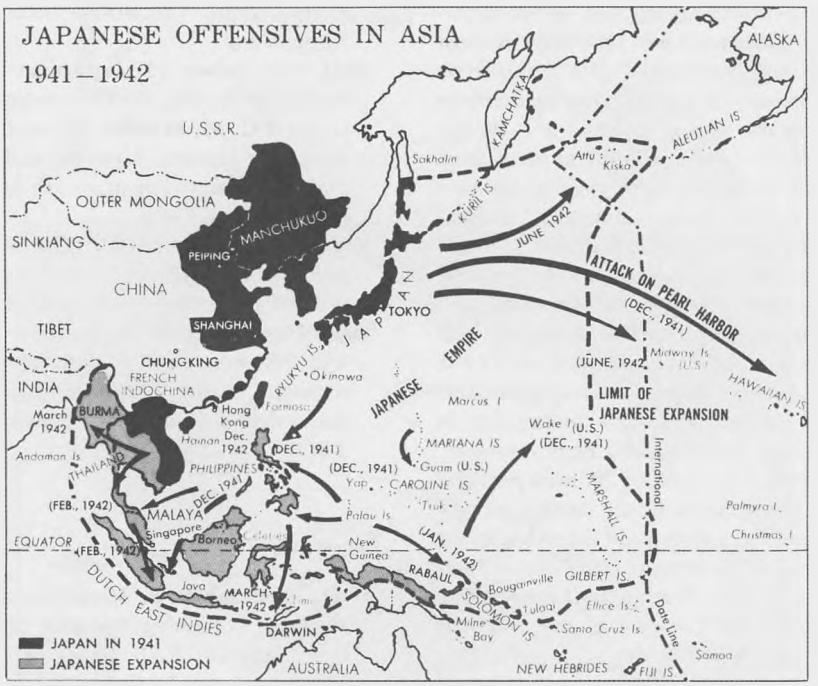
1941, December 25. Surrender. Out of water, and split into small pockets of resistance, the remnants of the 12,000-man British garrison surrendered. Japanese losses totaled fewer than 3,000.

Malaya

1941, December 8. Invasion of Northern Malaya. Following intensive predawn air attacks against RAF bases in Malaya and Singapore, the Japanese Twenty-fifth Army, commanded by Lieutenant General **Tomoyuki Yamashita,** made amphibious landings at Kota Bharu, near the northeast tip of Malaya, and at nearby Simgora and Patani, at the very southern extremity of Thailand's Kra Isthmus. The invaders, some 100,000 in number, were in 3 divisions, with substantial reinforcements of tanks and artillery. They quickly moved southward, on both sides of the peninsula, sweeping aside relatively light British covering units in the north. The bulk of British forces—slightly more than 100,000 men, also in 3 divisions—had been deployed to meet an anticipated invasion attempt farther south, directed against the great fortress of Singapore. The British commander, Lieutenant General **A. E. Percival,** regrouped to meet the Japanese drives.

1941, December 10. Loss of the *Prince of Wales* and *Repulse*. Admiral **Sir Tom Phillips** had raced north (December 8) from Singapore with HM battleship *Prince of Wales,* the battle cruiser *Repulse,* and a few destroyers, seeking to strike and destroy the amphibious armada

* Note that events west of the International Date Line took place on December 8; that same day, east of the Date Line, was December 7.



supporting the Japanese invasion. The RAF, hard hit by Japanese bombings, was unable to provide air support or reconnaissance. Unable to find the Japanese vessels, the British ships were returning south along the Malayan coast, when struck by Japanese aircraft based in southern Indochina. In the subsequent surface-air battle, which raged for about an hour, both great British ships, hit frequently by bombs and torpedoes, sank with heavy loss of life. Survivors were rescued by destroyers. Save for 3 American aircraft carriers, this left the Allies with no remaining serviceable capital ships in the Pacific.

1941, December 10–31. Japanese Drive to Southern Malaya. British troops, unaccustomed to jungle fighting, plagued by serious equipment shortages, and without adequate air support, were rolled up, infiltrated, and pushed back by the well-equipped Japanese—veterans of combat in China and trained for jungle fighting on Hainan Island. British efforts to stop the advance were further discomfited by a number of small amphibious landings, made on both coasts of the peninsula, by Japanese troops using captured fishing vessels. As the year ended, the demoralized British were being driven back relentlessly upon Singapore itself, now a naval base without a naval force.

The Philippines

American Situation and Plan. American and Filipino ground forces in the islands, under General Douglas MacArthur, consisted of some 130,000 men–22,400 U.S. Regulars (including 12,000 Philippine Scouts), 3,000 Philippine Constabulary, and the Philippine Army, 107,000 strong, but only partly organized, trained, and armed. The major portion of this force was on the island

of Luzon; other Filipino elements were on the islands of Cebu, the Visayas, and Mindanao. MacArthur's U.S. Far East Air Force, under Major General **Lewis H. Brereton,** comprised about 125 combat planes, including 35 new B-17 "Flying Fortresses." Most of Admiral **Thomas C. Hart**'s U.S. Asiatic Fleet (1 heavy and 2 light cruisers, 13 destroyers, 28 submarines, and other craft) was being withdrawn to Java by Navy Department order; 4 destroyers, the submarines, a squadron of flying boats, and a flotilla of motor torpedo boats remained, together with a regiment of Marines. The major portion of the ground-force strength—Major General **Jonathan M. Wainwright**'s North Luzon Force—was disposed north of Manila to dispute an expected invasion via Lingayen Gulf. Brigadier General **George M. Parker**'s smaller South Luzon Force was south of Manila. MacArthur proposed to meet invasion by counterattack on the ground together with a B-17 strike at Formosa. Last-ditch defense contemplated withdrawal to the mountain jungle of the Bataan Peninsula, northern arm of Manila Bay, supported by the coast-defense complex at the bay mouth, with Corregidor its citadel. This eventuality had long been planned; the successful defense of the Philippines was predicated on the premise that the forces there would hold out until the U.S. Pacific Fleet opened the way for reinforcement.

Japanese Plans. These called for initial paralyzing air attack, mounted from Formosa and followed by amphibious assault by the Fourteenth Army under General **Masaharu Homma** (approximately 50,000 veteran troops). Discounting both the fidelity and the fighting capabilities of the Filipinos, a quick, easy victory was expected. The Japanese high command had allotted Homma 50 days to accomplish the task.

1941, November 27. Alert. With imminence of war with Japan evident to all, the U.S. and Philippine armed forces went on full war alert.

1941, December 8. Disaster at Clark Field. Preceded by minor blows at northern Luzon airfields, the main Japanese aerial attack—108 twin-engined bombers and 34 fighter planes from Formosan bases—struck the Clark Field-Iba airdrome complex in the Manila area at 12:15 P.M., to find the major portion of the American air force grounded, their crews at lunch or servicing their planes. Japanese success was complete and devastating. Eighteen of the 35 B-17s, 56 fighters, and a number of other aircraft were destroyed, together with part of the installations; the 1 U.S. fighter squadron in the air, though it took some toll of the invaders, was almost wiped out. Only 7 Japanese fighters were shot down.

COMMENT. *Responsibility for this tactical surprise has never been definitely fixed. News of the Pearl Harbor disaster had reached Manila at 2:30* A.M. (*8* A.M. *December 7, Hawaiian time*) *and was confirmed 3 hours later. At 9:30 the northern Luzon airfields had been bombed. Brereton had received a phone call from General H. H. Arnold in Washington, warning him of a likely Japanese attack. Yet, despite knowledge that Japan had struck the first blow, MacArthur's intended B-17 counterblow on Formosa had not materialized and Brereton's planes lay like sitting ducks on their fields at 12:15* P.M.

1941, December 10–20. First Landings on Luzon. While Japanese bombers wrecked the naval base at Cavite, destroying ships, installations, and munitions, small amphibious landings were made at Aparri and Vigan, northern Luzon (December 10), and at Legaspi in the south (December 12). Air bases were established in the north, and planes transferred from Formosa. The remnants of the American air force were transferred to Mindanao; all remaining naval craft except the submarines and a flotilla of motor torpedo boats left for Java.

1941, December 20–31. Mindanao and Jolo. Japanese units gained a toehold on the southernmost island, Mindanao, Philippine Army troops present withdrawing to the hills. The invaders later seized the island of Jolo (Decem-

ber 25). By these moves, air and naval bases were gained for further operations against the Dutch East Indies (see p. 1244). Homma's amphibious force entered Lingayen Gulf and began landing, covered by fighter planes operating from northern Luzon bases.

1941, December 22. Main Invasion of Luzon.

1941, December 23–31. Withdrawal. Driving in the partly trained Philippine Army units opposing them, the Japanese on Luzon advanced rapidly south. Only the gallantry and steadiness of the few American and Philippine Scout units saved Wainwright's troops from disaster as he withdrew in successive positions. In the south, an additional Japanese landing in force at Limon Bay (December 24) threatened the South Luzon Force. MacArthur, between the closing pincer jaws, decided on withdrawal into Bataan. Manila was declared an open city (December 26). A counterattack by rallied Philippine Army units, supported by Regulars, threw back Homma's spearheads long enough to permit the South Luzon Force to withdraw westward across the unfordable Pampanga River. Thus the year ended with MacArthur's troops safe on the Bataan side, thanks to skillful training and excellent troop leading.

COMMENT. *Had MacArthur elected to defend Manila, as the Japanese expected him to do, his entire army would have been irrevocably lost. The Japanese could then have moved their troops southward to aid in seizing the entire Southern Resources Area. As it now stood, they were still confronted by a force in being, which would have to be conquered before the Manila Bay fortifications could be reduced and Manila converted to an advance base. Tactically, Homma had gained a victory; strategically, his campaign had just commenced.*

The War Against Japan, 1942

Strategy and Policy

1942, January–March. Struggle for the Malay Barrier. The year opened with Japan moving to victory on all fronts of her "Greater East-Asia Co-Prosperity Sphere." The Dutch East Indies alone remained untouched. There the remnants of Allied forces in the Far East rallied briefly under a short-lived, extemporized command—ABDA (American-British-Dutch-Australian)—authorized at the Arcadia Conference in Washington (see p. 1183) and inaugurated under command of British General Sir **Archibald Wavell** (January 15). His mission was to hold the so-called "Malay Barrier" (the Southeast Asia peninsula, and the projecting island chain of the Netherlands East Indies and New Guinea to northern Australia), while American naval, air, and land forces held open lines of communication across the Pacific to Australia and New Zealand. Hopefully, if the Malay Barrier could be held, Japan would be denied vital raw materials of the Southern Resources Area essential to her war effort.

1942, March. Allied Reorganization. The fall of Malaya, Singapore, and the Dutch East Indies and Japanese successes in the Philippines and Burma caused the collapse of ABDACOM and forced the Allied Combined Chiefs of Staff to reorganize for a last-ditch attempt to hold their most "vital interests" in the Pacific and Asia, while still concentrating primarily against Germany. Britain was to be strategically responsible for the operations in and near India and the Indian Ocean, the United States for the Pacific Ocean; China, under the supreme command of Chiang Kaishek, was to be within the area of American strategic and logistical responsibility, with American Lieutenant General **Joseph W. Stilwell** to be Chiang's Chief of Staff. (Later, in July, for administrative reasons, the U.S. created the China-Burma-India Command, or Theater, under Stilwell's command, responsible for logistical and combat support to China, for control—under the British—of American and Chinese combat troops in India and Burma; Stilwell was thus simultaneously responsible to the U.S. Joint Chiefs of Staff, to Chiang, and to the British commander in India.) The Pacific Theater was divided into two major commands. General MacArthur's Southwest Pacific Area included Australia, New Guinea, the Netherlands East Indies (save for Sumatra, within the British sphere), and the Philippines. Admiral **Chester**

W. Nimitz' Pacific Ocean Areas included the remainder of the ocean, and was in turn divided into three major combat zones: North, Central, and South Pacific Areas.

1942, April–May. Revised Japanese Plan. The second phase of the original Japanese war plan (see p. 1232) had contemplated the consolidation of a defensive perimeter anchored on the mountainous Burma-India border in the west, and in northern New Guinea, the Bismarcks and Gilberts, Wake, and their own Pacific islands on the southeast and east. The ease and rapidity of their first phase conquests, including the seizure of all of the planned island outposts, led them to plan an extension of the perimeter in the central and south Pacific: to seize Midway Island as a base from which to harass Hawaii, and southern New Guinea and the southern Solomon Islands as bases from which to harass Australia and to interfere with the Allied trans-Pacific supply routes from the U.S. and the Panama Canal. Furthermore, they felt that this extension of their perimeter would still further increase the magnitude of any Allied efforts to recover the conquered regions.

1942, May–August. Stemming the Japanese Tide. The failure of the Japanese to gain a victory in the drawn naval Battle of the Coral Sea (see p. 1252), their decisive defeat at the Battle of Midway (see p. 1253), and the repulse of their offensive in southern New Guinea (see p. 1247) prevented the Japanese from achieving any of the new objectives of their revised war plan, save for unopposed occupation of bases in the southern Solomon Islands.

1942, August–December. Limited Allied Offensives. Exploiting their first important successes of the Pacific War, the Allies began local offensives in New Guinea and the Solomon Islands. Since most Allied resources were earmarked for defeat of Germany (see p. 1183), these offensives were limited in scope and objectives, intended primarily to reduce Japanese threats to Allied lines of communication, to seize bases suitable for subsequent offensives, and to subject the Japanese to a war of attrition which they could not afford.

Land and Air Operations in Asia

Malaya and Singapore

1942, January 1–31. British Defeat on the Peninsula. Completely outfought and outmaneuvered by Japanese infiltrating and flanking attacks, supported by overwhelming air power, British troops were rapidly forced back to the so-called Johore Line, some 25 miles north of Singapore. This was breached (January 15) and the defenders forced back (January 31) into the island fortress, separated from the mainland by the narrow Strait of Johore—less than a mile wide and bridged by a causeway, which the British partly demolished behind them.

1942, February 8–15. Conquest of Singapore. Japanese assaults followed a protracted air bombardment; crossings in armored barges were covered by intense artillery and machine-gun fire. British counterattacks were broken up by dive bombers. Tanks began moving across the causeway, which Japanese engineers had repaired, and despite foot-by-foot resistance the city's reservoirs were captured. The 70,000-man garrison thereupon surrendered unconditionally (February 15). Total casualties were 138,700 British (mostly prisoners) and 9,824 Japanese.

COMMENT. *Two unpardonable deficiencies brought about the fall of this so-called impregnable fortress-naval base: its fixed defenses and artillery were sited to repel naval attack only, and its field forces were shockingly ignorant of the terrain and of jungle fighting. The first was due to poor judgment, the second to inferior preparation and leadership. The high quality of Japanese planning and leadership, evident throughout, was clearly demonstrated by the availability of armored amphibious barges for the final assault across the Strait of Johore.*

Burma

LAND OPERATIONS

Simultaneously with the various offensives begun on December 8, 1941, the Fifteenth Japanese Army quietly occupied Thailand. While the main body prepared for an overland invasion of Burma, a detachment seized an air base at Victoria Point, at Burma's southernmost tip, to cut the British air line of communications from India to Malaya (December 23).

1942, January 12–29. Invasion. Lieutenant General **Shojiro Iida**'s Fifteenth Army (initially 2 reinforced divisions, with heavy air support) began a westward advance on Moulmein and Tavoy from Thailand. The Japanese were accompanied by a small group of Burmese revolutionaries, who had been promised Burma's independence from Britain. In subsequent months, **Aung San** and his "Thirty Comrades" had some success in inciting minor uprisings against the British and in sabotage behind the British lines.

1942, January 30–31. Battle of Moulmein. Lieutenant General **Thomas Hutton**'s British forces in Burma (the equivalent of 2 small, ill-equipped divisions of British, Burmese, and Indian troops) were surprised, then driven out of Moulmein with heavy losses and forced to withdraw across the Salween.

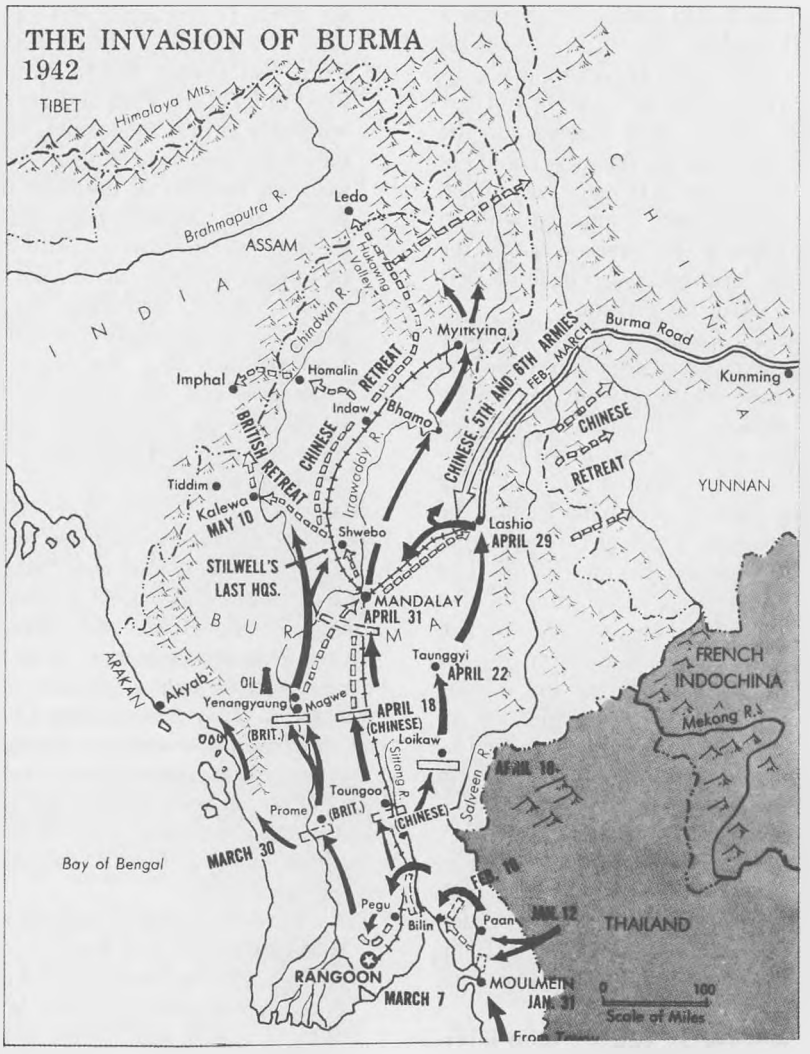
1942, February 18–23. Battle of the Sittang. Japanese units crossing the unbridged Salween enveloped the British left, forcing them to withdraw to the Sittang River in a continuous running fight. Approximately half of Hutton's army had gotten across the Sittang's lone bridge when another surprise river-crossing envelopment threatened the bridge from the rear. The British blew up the bridge at once. Most of the cut-off men made their way back across the river on rafts, but all of their heavy equipment was lost.

1942, March 5. Alexander in Command. Lieutenant General Sir Harold R. L. Alexander arrived in Rangoon to replace Hutton. Although the arrival of a number of small reinforcement units from India had brought British ground strength back up to a strength of 2 small divisions, Alexander realized that his scattered and largely demoralized forces could not now hold the onrushing Japanese. He abandoned Rangoon, personally barely escaping capture by converging Japanese columns moving in to seize the capital (March 7). Burma, whose land frontiers were all mountain ranges traversed only by narrow trails, save for the Burma Road, was thus cut off from all the outside world except China.

1942, March 12. Arrival of Stilwell and the Chinese. With their forces in Burma crumbling, the British in February accepted an offer of assistance from Chiang Kai-shek, who at once sent his Fifth and Sixth armies marching down the Burma Road. (Chinese and Japanese armies were normally the equivalent of western corps; these 2 were undermanned and very short of artillery, trucks, and other equipment; the Fifth Army, comprising veteran troops, well led, had a combat efficiency comparable to a western or Japanese division; the Sixth was less reliable.) Chiang also sent his new American chief of staff, Lieutenant General Stilwell, to command this expeditionary force in Burma. Stilwell reported to Alexander at Maymyo, Burma's temporary capital.

1942, March 13–20. Reorganizing on the Prome-Toungoo Line. Alexander established a defensive line running generally south of Prome and Toungoo, and thence east to Loikaw, overlooking the Salween River. The British Burma Corps held the right, in the Irrawaddy Valley, covering Prome. The Chinese Fifth Army held the center, traversed by the Rangoon-Mandalay road and railroad; the Chinese Sixth Army held the mountainous, jungled region to the east. Competent British Major General **William Slim** arrived (March 19) to take command of the Burma Corps.

1942, March 21–30. Renewed Japanese Of-



fensive. Iida's troops, reinforced and rested, made their main effort against the Chinese Fifth Army at Toungoo. They cut off the Chinese 200th Division, but determined counterattacks under Stilwell's direction, supported by Slim's British troops, permitted the trapped division to fight its way out. Japanese pressure, however, drove the Chinese slowly back up the railroad, while the British were forced to evacuate Prome.

1942, April 1–9. Reinforcements and Offensive Preparations. The coincidental arrival of reinforcements to both sides now caused a temporary lull. The arrival of part of the Chinese Sixty-sixth Army permitted Stilwell to bolster his troops holding the railroad. With the Japanese apparently stopped, he and Slim began to prepare for a counteroffensive. Iida, however, had just received 2 veteran divisions from the victorious Malaya-Singapore campaign. He prepared for a daring double envelopment; he was ready first.

1942, April 10–19. Battle of Yenangyaung. The Japanese plan called for the first blow to be

made against the British Burma Corps while a holding attack kept the Chinese on the railroad occupied; the Sixth Army at Loikaw was temporarily left in peace. Despite a gallant and desperate British effort to hold Magwe and the Yenangyaung oil fields, the Japanese could not be stopped. The 1st Burma Division was cut off, but British counterattacks, combined with an attack by the Chinese 38th Division against the east flank of the Japanese encircling force, permitted Slim to rescue the division.

1942, April 18–23. Collapse of the Chinese Sixth Army. With Allied attention riveted on the desperate battle for the oil fields, the heavily reinforced Japanese 56th Division suddenly struck the Chinese Sixth Army in the Loikaw-Taunggyi area. The surprised Chinese were overwhelmed. Stilwell, personally leading the tough 200th Division, struck at Taunggyi from the west, only to discover that the Japanese had disappeared. Deliberately abandoning its own line of communications, the 56th Division had struck northward along the Salween toward Lashio, terminus of the railroad and starting point of the Burma Road. Meanwhile, the remainder of the Fifteenth Army maintained its pressure against the British and Chinese south of Mandalay, who now began to fall back because of the threat to their left rear.

1942, April 29. Fall of Lashio. Seizing Lashio, the 56th Division then turned southwestward, toward Maymyo and Mandalay. Alexander, who had already decided to abandon Mandalay, now hastened the withdrawal across the Irrawaddy.

1942, April 30–May 1. Fall of Mandalay. Holding off the converging Japanese drives during the night, the remnants of the Allies completed their withdrawal over the Ava railroad bridge, which was then blown up.

1942, May. Retreat from Burma. Pressed closely by the Japanese, Slim and his Burma Corps fell back quickly toward Tiddim and the Indian frontier. After a last desperate defensive battle at **Kalewa** (May 11), Slim got his remaining troops across the Chindwin River and into the border hill region; the retreat continued to Imphal. The Japanese pursuit stopped at the river. To the north and east the Chinese were also scattering. The survivors of the Sixth Army had already fled to Yunnan. The scattered units of the Fifth and Sixty-sixth armies withdrew as best they could, some across the mountain borders to Yunnan, some to the Himalayan foothills of northern Burma, where they spent a miserable rainy season; a handful moved to the northwest, with a starving stream of civilian refugees, across the mountains to India. Stilwell, gathering his headquarters group, led an aggregation of 100-odd men and women—including American Dr. **Gordon Seagrave** and his Burmese field hospital personnel—on an amazing trek of 400-odd miles, by jeep and foot, across the mountain jungles to Imphal.

COMMENT. *The British had 30,000 casualties among the 42,000 involved in the First Burma Campaign. About half of these were "missing": Burmese who threw down their arms to return to home and family, or refugees who later turned up in India. Chinese losses defy estimation. Of the 95,000 Chinese troops engaged, only 1 division—the 38th, commanded by Major General* **Sun Li-jen** *(VMI and Purdue graduate)—withdrew as a fighting unit, but with heavy losses, cutting its way westward across the path of the Japanese advance and acting as a rear guard for the more demoralized British units retreating from Tiddim to Imphal. Japanese ground losses amounted to 7,000.*

1942, May–December. Japanese Consolidation in Burma. With the monsoon season beginning, the Japanese ended their pursuit and began to consolidate control of Burma, four-fifths of which was in their hands. They had accomplished their major objectives: to cut off China completely from surface communication with her allies, and to seize an area which could be developed into a powerful bastion to protect the western approaches to the Southern Resources Area.

1942, June–December. Allied Reorganization and Planning. Fearful of a possible Japanese invasion of India in the coming dry season, the British feverishly prepared for defense. Wavell, now commanding in India, knew that he could not consider an offensive

effort to reconquer Burma for at least another year, until his newly raised British and Indian troops could be adequately equipped and trained. Meanwhile, for training and morale purposes, he planned for a limited invasion of the Arakan region, Burma's northwest seacoast region, isolated from the rest of Burma by mountains. Stilwell, more impatient to reconquer Burma, so as to reopen surface communication with China, was meanwhile building up a Chinese Army in India around the nucleus of the Chinese troops that had escaped from Burma across the Chin Hills. Reinforcements came to the training center at Ramgarh in empty "Hump" planes returning from China (see p. 1244), while equipment was arriving by ship from the U.S. In anticipation of his projected advance through north Burma, Stilwell began construction of a road eastward across the Chin Hills from Ledo, in Assam, generally following the principal northern refugee route from Burma.

Air Operations

1941, December. Deployment of the "Flying Tigers." Upon the outbreak of war in Southeast Asia, Colonel Chennault sent 1 of the 3 squadrons of his American Volunteer Group (AVG, or "Flying Tigers"; see p. 1232) to Kunming to protect the Chinese terminus of the Burma Road from air attack. Another (upon British request) was sent to reinforce the weak RAF force (equipped with obsolescent planes) at Mingaladon Airport near Rangoon. The third squadron, kept in reserve, was rotated regularly with the others after they became involved in active operations. In its first action, the Kunming squadron intercepted Japanese bombers from Indochina on a raid against Kunming, shooting down 6 with no losses to themselves (December 20). Three days later the Japanese mounted their first air raid against Rangoon. Lacking the air warning system Chennault had established in China, the Flying Tigers and RAF fighters at Mingaladon were forced to take off during the raid, but nevertheless shot down several of the attackers with slight loss of themselves (December 23).

1942, January–February. The Air Battle for Rangoon. The effectiveness of the Flying Tigers caused the Japanese to increase the number of fighter escorts for their bombers, but despite heavy losses (compensated by reinforcements from Malaya) they continued to bomb Rangoon regularly. Besides combating air raids on Rangoon, the American fighters frequently flew support missions for hard-pressed British ground forces, easing slightly the merciless pounding these were receiving at the hands of Japanese surface and air units. Meanwhile, RAF bombers based at Magwe made a few raids against the principal Japanese air bases in Thailand, with relatively little effect. By the end of February, the RAF fighters at Mingaladon had all been put out of effective action; but thanks to Chennault's superior aerial tactics, only 15 of his planes had been lost (8 of the pilots walked back to base to fly again), and they had shot down more than 100 Japanese planes. By rotating his squadrons into Mingaladon, he had been able to keep planes and men in good operational condition.

1942, March 1–20. Operations from Magwe. The approach of Japanese ground troops to Rangoon forced Chennault to pull back from Mingaladon to the RAF base at Magwe, whence he continued support of British and Chinese ground troops.

1942, March 21. Japanese Raid on Magwe. A surprise massive Japanese air raid caught most of the American and British planes at Magwe on the ground and destroyed the effectiveness of all air units based there. Chennault, able to salvage only 3 planes from the wreckage, withdrew north to Loiwing just inside the Chinese border. The RAF withdrew to fields in India.

1942, April–May. Long-Range Air Support for Burma. Flying Tigers and RAF fighters continued to give long-range support to the withdrawing Allied troops in Burma, but it was relatively ineffective due to inadequate communications with the ground and to the short time available for action over the battlefield. The arrival of some Spitfires from England,

however, permitted the RAF fighter pilots to fight the Japanese on more even terms. With the loss of Burma and the closing of the Burma Road, Chennault, concentrating at Kunming, reduced his activities sharply to conserve his dwindling supplies of fuel and ammunition.

1942, June–December. Flying the "Hump." With ground communications to China severed, the Americans, under Stilwell's direction as commanding general of the China-Burma-India Theater, began a long-range supply airlift from bases in northeastern India to Kunming. Because of Japanese air bases at Myitkyina in northern Burma, the planes were forced to fly over the eastern Himalayas in southeastern Tibet, climbing to 21,000 feet and more to get over the mountains. This route over the world's highest mountains was dubbed the "Hump" by American pilots. Stilwell could get only a few additional transport planes, and so this initial airlift was a feeble and totally inadequate drop in the bucket. The newly activated U.S. Tenth Air Force, Major General **Howard C. Davidson,** was installed on Indian air bases to protect the Hump bases.

China

There was little formal combat activity in China during 1942. The Japanese, engaged elsewhere on an amazing series of peripheral offensives, were content to hold what they had. Guerrilla activity in areas behind the Japanese lines did not seriously threaten their firm occupation hold. The Chinese National Government armies were in no position to take advantage of Japanese inactivity, since the closing of the Burma Road had cut off their already meager supply of matériel and munitions. Stilwell's hitherto good relations with Chiang Kai-shek worsened when the Joint Chiefs of Staff turned down his requests for additional transport planes to increase supply over the Hump. (Other theaters had priority.) At the same time, friction rose between Stilwell and Chennault, now a brigadier general commanding the U.S. China Air Task Force (successors to the Flying Tigers, July 4). Chennault demanded that his fuel and ammunition requirements get priority over all other air-lifted supplies, while Stilwell insisted on balance between ground and air forces.

Land and Air Operations in the Pacific Areas

The Netherlands East Indies

1942, January–February. Japanese Invasion. A 3-pronged Japanese amphibious offensive moved south on the Dutch East Indies, with initial landings at Tarakan, oil-rich island off the east coast of Borneo, and at Menado on northern Celebes (January 11). The Japanese Eastern Force proceeded via Celebes, the Moluccas, and Timor toward Bali and Java. The Central Force advanced down the Macassar Strait along the east coast of Borneo toward Java. The Western Force moved through the South China Sea to north Borneo and Sumatra. Each force comprised a group of heavy cruisers and destroyers escorting transports carrying units of the Sixteenth Army and supported by powerful land-based air units. Admiral Nagumo's First Air Fleet provided additional far-flung air support. To oppose these forces, Wavell's ABDA Command consisted of vastly out-numbered American, British, and Dutch naval units, some 85,000 Dutch troops scattered on the main islands—most of them indigenous and of dubious loyalty—and a small Dutch air force equipped with obsolete planes. Covered by overwhelming and scarcely opposed air support, the Japanese forces moved from one key point to another, establishing new air bases to assure continued air superiority, then pressing generally southward again.

1942, February 25. Dissolution of ABDACOM. The fall of Singapore (see p. 1239) and the rapid decline of Allied naval forces having sealed the doom of the Netherlands East Indies (see p. 1250), Wavell's command was dissolved and he returned to India to supervise the deteriorating situation in Burma. The Dutch retained responsibility for the continuing defense of Java, and remaining American, British, and Australian forces in the area were to continue to assist.

1942, February 28–March 9. Battle for Java. Following intensive air and naval bombardments, the Japanese Western Force landed near Batavia. In subsequent days, units of the Central and Eastern Forces also landed. Determined Dutch resistance was totally incapable of coping with Japanese land superiority and total control of the air. Remaining Dutch forces were finally forced to surrender, virtually completing the conquest of the Netherlands East Indies (March 9).

The Philippines

1942, January 7–26. Defense of Bataan. MacArthur's troops lay astride the mountainous jungle at the base of the peninsula. Wainwright's I Corps held the left, Parker's II Corps the right, with the almost impassable height of Mt. Natib in the middle defended only by patrols. The supply situation was deplorable; although dumps had been established on the southern tip of the peninsula and Corregidor's ration reserves had been calculated for a 6-month stand, the mouths to be filled had been increased by more than 20,000 refugees from Manila crowding the area. Japanese command of sea and air precluded relief. The American command went on half-rations at once. Japanese attacks on both flanks were repulsed, but infiltrating elements, crossing Mt. Natib, threatened to split the American position, and after bitter fighting MacArthur withdrew to a more easily defended reserve position about 15 miles from the tip of the peninsula.

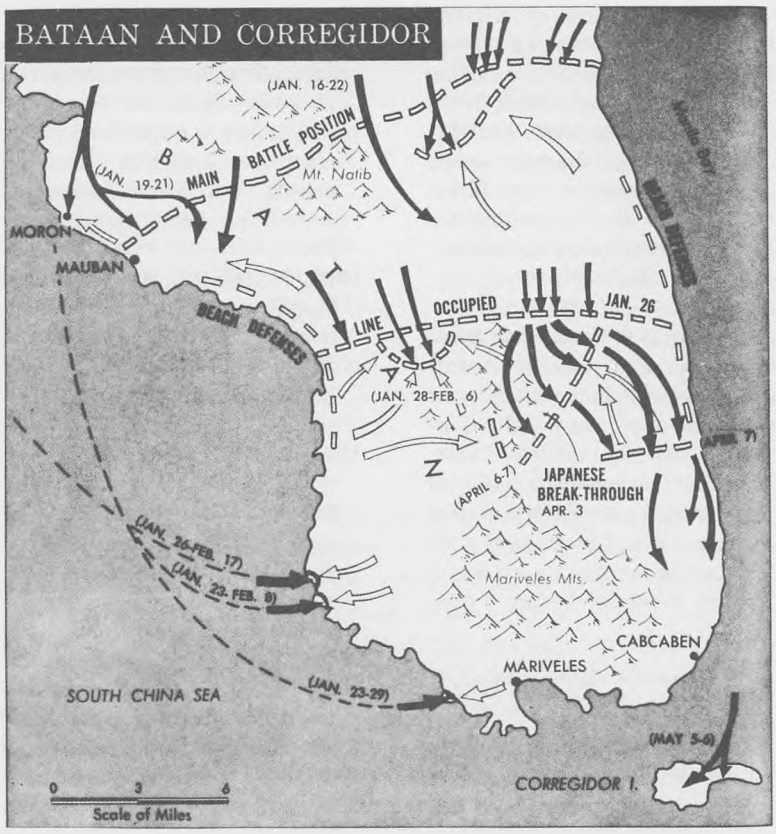
1942, January 26–February 8. Second Japanese Attack. While vicious assaults on the front were met and thrown back, amphibious landings on the western coast, well behind the battle line, became serious (January 23–26). They were finally repulsed by counterattack, by U.S. motor torpedo boat harassment, and by fire from Corregidor's artillery (January 29–February 13). Homma, withdrawing from the main front, waited for reinforcements from Japan.

1942, March 11. Departure of MacArthur. MacArthur, though unwilling, obeyed a peremptory order from President Roosevelt to leave for Australia and assume command of all Allied forces in the South Pacific. By PT boat and B-17 he arrived safely (March 17).

1942, March 11–April 2. Attrition. Wainwright now commanded, with Major General **Edward P. King** in command on Bataan. Despite good morale resulting from their success in repulsing all Japanese assaults, the efficiency of the troops was now sadly reduced. Rations had been cut to one-quarter, seriously affecting stamina; tropical diseases made great inroads. By the end of March, some 24,000 men were hospitalized or in convalescent areas.

1942, April 3–9. Japanese Breakthrough. Homma, reinforced and refitted, attacked under cover of incessant air and artillery bombardment. Bursting through the left flank of II Corps, the Japanese forced it back 10 miles in 48 hours. On the left, I Corps, bent back toward the sea, attempted counterattacks, but these were easily repulsed. II Corps disintegrated. King surrendered unconditionally (April 9). The Japanese, although permitting many of the Philippine Army personnel to return to their homes, hustled the Regulars, American and Filipino—in callous brutality—on a 90-mile "Death March" to Camp O'Donnell. American and Filipino losses in the Bataan campaign amounted to some 20,000-odd men, discounting deserters, detachments ferried to Corregidor, and those few brave souls who dared the jungle to become the nucleus for a guerrilla warfare which would rage until the end of the war.

1942, April 10–May 3. The Other Islands. Before his departure, MacArthur had left Briga-



dier General **Bradford G. Chynoweth** in control of forces in Cebu, Panay, Negros, Leyte, and Samar with instructions to prepare for guerrilla operations. Brigadier General **William F. Sharp,** with a larger command, was to oppose any further landings on Mindanao. Homma moved 2 brigade-size task forces south. One seized Cebu (April 10), the other Panay (April 16), the defending troops retiring to mountain fastnesses. Additional Japanese landings on Mindanao (April 29–May 3) drove Sharp's troops also into the hill country.

1942, April 10–May 6. The Ordeal of Corregidor. The citadel and its satellite island forts at the mouth of Manila Bay had supported the defense of Bataan by the fire of large-caliber fixed armament. Now the full force of Japanese air and artillery from Bataan and from Cavite swept the complex incessantly. Except for the 14-in. turret guns on Fort Drum—the "Concrete Battleship"—all these emplacements were open to air and plunging artillery fire. The only shelter on Corregidor was a tunnel carved into the rock of Malinta Hill, where the command post and hospital were installed. The bombardments destroyed all other installations.

1942, May 5–6. The Fall of Corregidor. The dazed defenders met Japanese amphibious assaults at the beach, their 155-mm. guns and lighter ordnance inflicting severe damage on the attackers, but a 2-battalion toehold was gained on the southern end of the island. At the end of his resources, with less than 3 days' supply of water remaining, Wainwright surrender unconditionally. At Homma's imperious

demand, the surrender included all U.S. forces in the Philippines. American losses were some 2,000 killed and wounded and 11,500 made prisoner. Japanese losses in the final assault were more than 4,000. In compliance with Wainwright's orders, Sharp surrendered on Mindanao (May 10), and Chynoweth on Panay (May 18). However, individuals and groups of Americans and Filipinos continued guerrilla resistance for the next three years.

COMMENT. *The First Philippine Campaign, its outcome a foregone conclusion from the beginning, was a tribute to the skill, gallantry, and stoic determination of the officers and men involved in the defense. It delayed the Japanese timetable for 5 long months during which the U.S. was rallying its resources. The one glaring error in the otherwise efficient Japanese plan and prosecution of the campaign was a complete miscalculation of the resistance to be expected from the Filipino people. On all other major fronts of the Japanese assaults, the indigenous populations were either indifferent or even disloyal to the defense; the same condition was expected in the Philippines. Homma looked forward to opposition from the small American component of MacArthur's forces only. Instead, the Filipino Regulars, like the Americans, lived up to the finest traditions of the service. The poorly trained and equipped Philippine Army units, after their first panic, quickly settled down, becoming veterans almost overnight. Most of the Filipino people gave loyal support both during the campaign and, as they later showed, in the guerrilla operations which continued to plague the invaders to the end of the war.*

Papua, the Bismarcks, and the Solomons

1942, January–March. Arrival of the Japanese. Amphibious units of the Japanese Fourth Fleet, overcoming brief but stout Australian resistance, seized Kavieng and Rabaul, the latter becoming the principal Japanese naval and air base in the South-west Pacific. Control of New Britain was consolidated during the following month. Amphibious landings were then made to seize Salamaua and Lae in Papua (March 6), and footholds on Bougainville (March 13).

1942, May–July. Expansion of the Japanese Perimeter. The Japanese expanded their control in the central and southern Solomons, culminating their efforts by establishing a base on Guadalcanal, where they began to build an airfield (July 6). Despite failure to gain naval control of the Coral Sea, Japanese plans to seize Port Moresby, principal city of southern Papua, were initiated by occupation of Gona (July 11) and Buna soon afterward. All land operations in Papua, the Bismarcks, and the Solomons were now under the Eighth Army, commanded by Lieutenant General **Hitoshi Imamura,** with headquarters in Rabaul. In response to repeated Japanese air attacks on Port Moresby, growing Allied air strength harassed Japanese bases.

1942, June–July. Strategic Controversy. Following the great American naval victory at Midway (see p. 1253), both General MacArthur and Admiral **Ernest J. King** (the new Navy chief in Washington) urged an offensive in the Bismarck-New Guinea area as a definite check to the Japanese menace to the U.S.-Australian supply line. King favored Navy-controlled island-hopping up the Solomons to Rabaul, MacArthur a direct thrust—Army-controlled—on Rabaul itself. This clash of personalities and of service jealousies was settled by compromise; the JCS ordered (July 2) a 3-phase operation: seizure of the southern Solomons by Vice Admiral **Robert L. Ghormley** (commanding the South Pacific Area under Nimitz), and seizure of the remainder of the island mass and of the northwest coast of New Guinea by MacArthur, whose final objective was the capture of Rabaul itself. MacArthur's initial move, however, was delayed by a continuation of the Japanese offensive.

Operations in Papua, July 1942–January 1943

1942, July 21–September 13. Advance on Port Moresby. Elements of the Japanese Eighteenth Army, under Major General **Tomitoro Horii,** pressed inland from Gona,

drove in local Allied troops, and moved up the rugged Kokoda Trail to seize the key pass over the Owen Stanley Mountains (August 12). Pushing ahead, the Japanese reached to within 30 miles of Port Moresby before stiffening Australian and American resistance, under Australian Major General **Edmond F. Hering,** supported by tactical air forces with local air superiority, halted the advance.

1942, August 25–September 5. Operations at Milne Bay. A Japanese regimental-strength amphibious landing was contained and repulsed by Australians.

1942, September–November. The Return across the Owen Stanley Range. Partly under Allied pressure, and partly in compliance with defensive instructions from Imamura, the Japanese fell back stubbornly over the mountains, followed by the Australian 7th and U.S. 32nd divisions. The Allies were finally halted by a massive jungle fortress, cleverly constructed in the swampy region around the villages of Buna and Gona on the coast of the Solomon Sea (November 19).

1942, November 20–1943, January 22. Battle for Buna-Gona. The Allied offensive bogged down. The Americans and Australians were racked by disease; they were short of artillery and rations, and untrained in jungle warfare. U.S. Lieutenant General **Robert L. Eichelberger,** placed in command by MacArthur (December 1), quickly restored sagging Allied morale and rectified the serious logistical deficiencies. The Australians, on the Allied left, stormed Gona (December 9). More heavily fortified Buna, however, long resisted the American attacks, even after yard-by-yard advances had brought the attackers within sight of the shore. A final converging assault of Americans and Australians overran the defenders, some of whom were able to escape in surface craft, but most of the Japanese died. Total Japanese casualties in the Buna-Gona operation were more than 7,000 dead, an unknown number of wounded evacuated, and 350 wounded prisoners. The Allies lost 5,700 Australians and 2,783 Americans killed and wounded. Both sides lost heavily from disease, the Americans alone having about 60 percent of 13,646 men incapacitated.

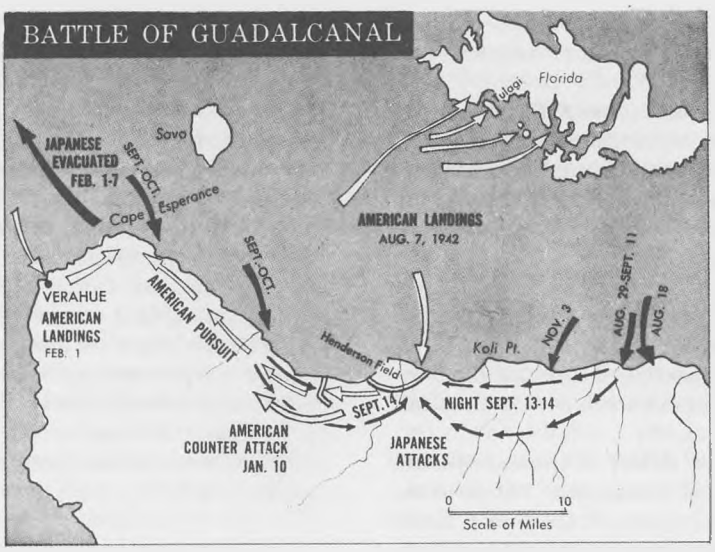
COMMENT. *One of the most important aspects of this relatively small operation was the proof that Allied troops could defeat the hitherto invincible Japanese in the jungle.*

OPERATIONS ON GUADALCANAL, AUGUST 1942–FEBRUARY 1943

1942, July–August. American Preparations. Word of construction by the Japanese of an airfield on Guadalcanal hurried the planned American amphibious move into the southern Solomons. Admiral Ghormley, at Noumea, sent an amphibious task force under Rear Admiral **Richmond K. Turner,** carrying Major General **Alexander A. Vandegrift**'s reinforced 1st Marine Division (19,000 men) and an air support force built around Admiral **Frank J. Fletcher**'s 3-carrier task force. Fletcher, as senior officer, commanded the expedition.

1942, August 7. Landings on Tulagi and Guadalcanal. The Marines began landing on Guadalcanal and Tulagi in complete surprise. The small Japanese garrisons—2,200 on Guadalcanal and 1,500 on Tulagi—were quickly scattered. While Vandegrift began a perimeter defense of the still-incomplete Guadalcanal airfield, unloading operations commenced from the transports huddled in the sound between Guadalcanal and Florida islands. But prompt and violent Japanese air attacks soon interfered with the unloading.

1942, August 9–19. Departure of the Navy. The combination of the intensive Japanese air attacks and a stunning Japanese night naval victory off Savo Island (see p. 1256) caused Admirals Fletcher and Turner to withdraw their naval forces from the sound and the nearby waters, leaving the Marines, short of supplies, completely isolated on Guadalcanal and Tulagi. However, long-range land-based planes from the New Hebrides flew frequent covering missions overhead, and fast destroyer transports brought additional supplies. Mean-



while, engineers rushed the Guadalcanal airfield, now renamed Henderson Field, to completion. Japanese reinforcements, brought down at night by destroyer, began to assemble near Taivu Point and Kokumbona, east and west of Henderson Field.

1942, August 20. Arrival of Air Support. Upon the completion of Henderson Field, a squadron of 31 Marine planes arrived to give direct support and air cover to the 1st Marine Division. This strength was gradually built up to about 100 aircraft.

1942, August 21–September 12. Skirmishing Around the Perimeter. Clashes between American and Japanese patrols (which had been sporadic since the landings) became more frequent and more intensive. Nightly rushes of Japanese destroyers down "the Slot" (the channel between the northeastern and southwestern chains of the Solomon Islands) brought Japanese reinforcements. In the daytime the waters in the vicinity of Guadalcanal and Tulagi belonged to the American Navy, covered by planes from Henderson Field and from the Hebrides; at night the "Tokyo Express"—Japanese destroyers and light cruisers—dashed into the sound to drop men and supplies on Guadalcanal, and to bombard the Marine positions and airfield.

1942, September 12–14. Battle of Bloody Ridge. Japanese forces, the equivalent of a regiment, vigorously attempted to seize positions on Lunga Ridge, overlooking the airfield from the south. Combination of infiltration and frontal assaults came close to breaking the Marine lines, but the attacks were repulsed. The Japanese left 600 dead on the field (their total casualties are unknown); American casualties were 143 killed and wounded.

1942, September 15–October 22. Continuing Build-ups on Guadalcanal. While violent air and naval battles took place over and around Guadalcanal, both sides built up their ground strength. By mid-October, Vandegrift's command on Guadalcanal alone had reached a strength exceeding 23,000. The Japanese Seventeenth Army, 2 divisions under Major General **Haruyoshi Hyakutake,** comprised at least 20,000. Patrol skirmishing and probes around the perimeter increased in intensity as the Japanese prepared for another assault.

1942, October 23–25. Land Battle of Guadalcanal. For 3 days the Japanese launched intensive but piecemeal and uncoordinated attacks at different points of the Marine perimeter. Though fighting was severe, none of the assaults came close to success, and all were repulsed with appalling losses. Japanese dead

totaled over 2,000, with numbers of wounded unknown; American casualties were less than 300.

1942, October 26–December 8. Expansion of the Perimeter. Vandegrift immediately extended the American perimeter far enough to prevent Japanese artillery fire from reaching Henderson Field. During the following 6 weeks, the area under American control was gradually extended farther, as units of the 2nd Marine Division landed to reinforce and relieve tired units of the 1st Marine Division. The air and naval battles continued almost without interruption during this period, with Japanese air losses mounting rapidly.

1942, December 9. Relief of the 1st Marine Division. General **Alexander Patch,** commanding the Army Americal Division, relieved General Vandegrift in command of Allied operations on Guadalcanal. The 1st Marine Division was withdrawn.

1942, December 10–1943, January 9. American Build-up. The Japanese were now on the defensive, having established a heavily fortified jungle position about 6 miles west of Henderson Field, extending inland more than 4 miles from Pt. Cruz. This line was held by less than 20,000 Japanese, while American strength built up to 58,000 men in the XIV Corps, commanded by Patch, which included the Americal, 25th, and 2nd Marine divisions. The Japanese were short of supplies and riddled with disease; the Americans were well supplied, in good condition, and high morale, though less experienced in jungle fighting than the Japanese.

1943, January 10–February 7. The American Offensive. A vicious 2-week battle drove the Japanese from their jungle fortifications, which they held with tenacious bravery (January 10–23). Falling back under the cover of a desperate and well-conducted rear-guard action, the Japanese again attempted to stand at **Tassafaronga Point,** but were quickly driven northward toward Cape Esperance (January 31). A small American force was landed behind the Japanese lines west of Cape Esperance in an attempt to encircle the defenders and to prevent evacuation by sea (February 1). The combination of dogged, skillful defense by the starving, defeated Japanese soldiers and brilliant support from the Japanese Navy frustrated the American attempt, however, and approximately 13,000 Japanese were evacuated in night operations (February 1–7).

COMMENT. *Guadalcanal was the first large-scale Allied victory against the Japanese. Both sides made a number of mistakes, but the Japanese, who had a preponderance of land, sea, and air forces at the outset, made more than the Americans. Their greatest failure was in persisting in piecemeal operations, strategically and tactically, instead of attempting to build up local superiority against the Americans, which might have been possible at any time during the first 2 months of the battle.*

Naval Operations in the Pacific

The Netherlands East Indies

1942, January 11–22. Preliminary Japanese Penetrations. Powerful amphibious forces, under land-based air cover, moved into the northern areas of the Netherlands East Indies (see p. 1245). Supporting the numerous modern screening forces of cruisers and destroyers was Admiral Nagumo's First Air Fleet, veterans of Pearl Harbor. In opposition was a handful of American, British, and Dutch warships, mostly old World War I types. The Japanese air units exercised effective air superiority. The ABDA naval commander, under General Wavell, was American Admiral **Thomas Hart.**

1942, January 23. Battle of Macassar Strait. As the Japanese Central Force approached Balikpapan, it was surprised shortly after dark by 4 American destroyers. In an hour's battle the Americans sank 1 small Japanese warship and 4 heavily loaded troop transports, and damaged several other vessels. Then, having suffered little damage themselves, the Americans raced southward.

1942, January 24–February 3. Continuing Japanese Advance. The setback at Balikpapan did not delay the Japanese advance.

Rushing more warships and planes to the Macassar Strait area, all Japanese invasion forces continued to leapfrog southward. The main Dutch naval base at Amboina was captured (January 30).

1942, February 4. Battle of Madoera Strait. Japanese aircraft struck a combined American and Dutch squadron. The Japanese had few losses, but seriously damaged several Allied ships, including the U.S. cruisers *Houston* and *Marblehead.* The latter was forced to limp back to America for repairs, leaving the *Houston* as the only major U.S. ship in the area.

1942, February 13–14. Battle off Palembang. A U.S.-Dutch-British squadron, commanded by Dutch Rear Admiral **Karel Doorman,** attempted to prevent a Japanese landing at Palembang, Sumatra. Intercepted by Japanese planes, they were prevented from reaching the Japanese convoys.

1942, February 14. Change in Naval Command. Admiral Hart was succeeded by Dutch Vice Admiral **Conrad Helfrich.**

1942, February 19–20. Battle of Lombok (Bandoeng) Strait. Admiral Doorman's squadron, attempting to strike spearheads of the Japanese Eastern Force, approaching Java, was engaged by a smaller but skillfully handled Japanese destroyer squadron in a hard-fought night engagement. Damage was heavy on both sides, and 1 Dutch destroyer was sunk.

1942, February 19. Carrier Raid on Darwin. Admiral Nagumo's First Air Fleet struck a crippling blow against Darwin, main port in northern Australia, causing severe damage to shipping and shore installations.

1942, February 27. Battle of the Java Sea. Admiral Doorman's squadron of 5 cruisers and 10 destroyers made a bold but unsuccessful bid to attack the Japanese Eastern Force, which was escorted by Rear Admiral **Takeo Takagi**'s 4 cruisers and 13 destroyers. In a 7-hour running fight of crazy-quilt pattern, with the Dutch admiral gallantly forcing the fight to the end, Doorman's force was crushed; he went down with his flagship, RNNS *De Ruyter.* Only USS *Houston,* HMAS *Perth,* and HMS *Exeter,* with 5 destroyers (4 of them American), survived the battle. Japanese control of air and sea was now undisputed.

1942, February 28–29. Action off Banten Bay. The *Houston, Perth,* and several destroyers, attempting to escape to Australia, encountered a Japanese landing force approaching Java. The Allied ships, despite a hopeless situation, attacked, but were themselves ringed by destroyers and cruisers in point-blank fire and sunk. HMS *Exeter* and a British and an American destroyer, attempting to thread their way to safety through minefields off Surabaya, were all sunk (March 1) by naval gunfire and carrier-based bombers. Four U.S. destroyers escaped to Australia.

1942, February 29–March 9. Conquest of the Indies. The entire Dutch East Indies was formally surrendered (March 9). Japan had gained control of the Southern Resources Area. The Malay Barrier now pierced, the Japanese were free to move west toward India and south toward Australia.

American Raids in the Central Pacific

1942, January. Aftermath of Pearl Harbor. The loss of the U.S. Pacific Fleet battleships at Pearl Harbor meant that there could be no real counteroffensive in the Central Pacific for many months. However, the 3 aircraft carriers, USS *Lexington, Saratoga,* and *Enterprise,* had escaped the disaster. Admiral Ernest J. King, new Chief of Naval Operations in Washington, ordered Admiral Chester W. Nimitz, new commander of the Pacific Fleet, to use his carriers to harass the Japanese while American naval strength in the Pacific was being rebuilt. The task was complicated by severe damage to the *Saratoga,* struck by a Japanese submarine's torpedo (January 11). However, the USS *Yorktown* arrived from the Atlantic soon after this to join the Pacific Fleet.

1942, February 1. Attack on Gilbert and Marshall Islands. The carriers *Enterprise* and *Yorktown,* under Vice Admiral **William F. Halsey,** escorted by cruisers and destroyers,

sent their planes to attack Japanese bases on the Gilbert and Marshall Islands. Some damage was inflicted. The task force returned safely to Pearl Harbor.

1942, February 20. Aborted Raid on Rabaul. A task force built around the carrier *Lexington,* under Vice Admiral **Wilson Brown,** approached Rabaul through the Solomon Sea in an attempt to strike a surprise blow at Japanese forces concentrating there. Discovered and attacked by Japanese planes, the task force withdrew, but inflicted heavy losses on the Japanese air units.

1942, February 24–March 4. Raids on Wake and Marcus Islands. Halsey's *Enterprise* task force struck Wake (February 24) and Marcus (March 4) islands, inflicting some damage, and returning safely later to Pearl Harbor.

1942, March 10. Strikes at Lae and Salamaua. Brown's *Lexington* task force, joined by the *Yorktown,* sent planes across Papua from the Coral Sea, sinking and damaging several small warships and transports.

1942, April 18. Carrying the War to Japan. Sixteen Army B-25s under Lieutenant Colonel **James H. Doolittle,** carried on the US carrier *Hornet,* escorted by Halsey's *Enterprise* task force, flew 800 miles to bomb Tokyo and other Japanese cities. Little physical damage was done, but the Japanese were greatly alarmed and Americans greatly heartened by the feat. All of the attacking planes were lost or forced to crash land in China, save for one which landed at Vladivostok, where plane and crew were interned. Most of the fliers survived, though 2, falling into Japanese hands, were beheaded. The most important effect of the raid was to influence the Japanese high command to attempt to expand its perimeter in the central and southern Pacific, with disastrous results.

Battle of the Coral Sea

1942, May 1. Initiation of the New Japanese Plan. As the first step in the new Japanese plan, Admiral **Shigeyoshi Inouye** (commanding at Rabaul) had been ordered by the commander of the Japanese Combined Fleet, Admiral **Isoroku Yamamoto,** to seize bases in the southern Solomons and to capture Port Moresby. The small carrier *Shoho,* 4 cruisers, and a destroyer escorted an assault force of several transports south through the Solomons toward Tulagi. Meanwhile, a larger force was being assembled at Rabaul to assault Port Moresby by sea. To provide additional support, a striking force built around the large carriers *Shokaku* and *Zuikaku,* under Rear Admiral Takagi, moved south from the Central Pacific to enter the Coral Sea from the east. Unknown to the Japanese, American intelligence was aware of most of these plans because of the breaking of the Japanese code (see p. 1234). Admiral Nimitz sent Admiral Fletcher with a task force built around the carriers *Lexington* and *Yorktown* to block the Japanese plan. Fletcher was joined by a small squadron of American and Australian cruisers and destroyers under Rear Admiral **J. G. Crace,** R.N.

1942, May 3. Occupation of Tulagi. Japaanese forces occupied the island without opposition. The *Shoho* task force sailed north to join the Port Moresby assault force, which was leaving Rabaul.

1942, May 4. *Yorktown* Attack on Tulagi. *Yorktown* planes, bombing Tulagi, had minor success.

1942, May 5–6. The Fleets Approach. the *Yorktown* rejoined Fletcher's fleet in the central Coral Sea, just as Takagi's squadron was steaming into the sea from the northeast and as the *Shoho* force and the Port Moresby assault force were approaching the Coral Sea from the Solomon Sea to the north. Both main carrier forces searched for each other without success.

1942, May 7–8. Battle of the Coral Sea. In a confused series of actions marked by serious errors on both sides, the 2 carrier forces found and struck at each other. The *Shoho* was sunk by American planes (May 7). An attempted Japanese night attack (May 7–8) resulted in severe plane losses; American losses were slight. An exchange of strikes the next morning, however, resulted in the sinking of the *Lexington* and some damage to the *Yorktown;* the *Shokaku* was severely damaged, but the

Zuikaku was unscathed. An American destroyer and oiler were also sunk. Meanwhile, the loss of the *Shoho*, and the threat of Admiral Crace's squadron of 3 cruisers and several destroyers (which survived without damage several Japanese air strikes and a mistaken attack by American land-based planes) moving to intercept the Port Moresby assault force, caused Admiral Inouye to call off the invasion plan. The assault force returned to Port Moresby. Because of the losses they had suffered, Admirals Fletcher and Takagi almost simultaneously decided to withdraw from further action.

COMMENT. *This was the first great carrier battle; no surface ship on either side sighted the enemy. Tactically a draw (the Japanese lost more planes, the Americans more ships), it constituted a major Allied strategic success by halting the proposed assault on Port Moresby.*

The Battle of Midway

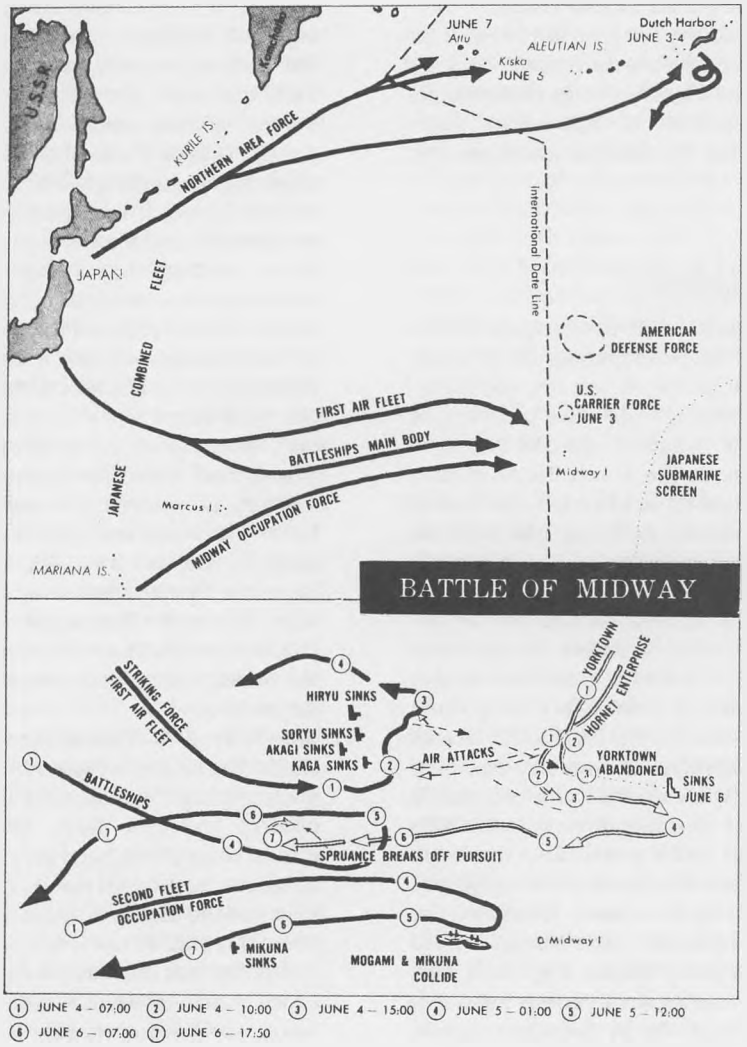
1942, May. Japanese Preparations. While Admiral Yamamoto, commander of the Combined Fleet, was preparing to carry out the revised Japanese strategic plan (see p. 1239), he learned that the American carriers *Enterprise* and *Hornet* were in the South Pacific (where Nimitz had rushed them in an effort to join in the Coral Sea battle). Believing that both the *Yorktown* and the *Lexington* had been sunk in that engagement, he was now certain that his planned blow at Midway would not be opposed by any American carriers. He nevertheless employed 165 warships, all of the available naval might of Japan, in the effort, the greatest armada yet assembled in the Pacific Ocean. Vice Admiral **Boshiro Hosogaya**'s Northern Area Force—2 light carriers, 7 cruisers, and 12 destroyers—was to make diversionary strikes against Alaskan bases just before the main forces struck Midway; after that, Hosogaya was to establish bases in the western Aleutians. The remainder of Yamamoto's fleet headed toward Midway in 3 separate forces: Nagumo's First Air Fleet (sadly missing the 2 carriers put out of action at the Coral Sea by damage or plane loss); the Midway Occupation Force, under Vice Admiral **Nobutake Kondo,** consisting of the powerful Second Fleet of 2 battleships, 1 light carrier, 2 seaplane carriers, 7 cruisers, and 29 destroyers, escorting 12 transports carrying 51,000 troops; and Yamamoto's main body, comprising 7 battleships, 1 light carrier, 4 cruisers, and 12 destroyers. In addition, 18 submarines had been sent to the waters between Midway and Pearl Harbor to report American movements and to attack opportune targets.

1942, May. American Preparation. Nimitz, warned through Navy Intelligence's knowledge of Japanese codes, ordered Halsey's *Enterprise-Hornet* task force to rush back north from the South Pacific; also Fletcher's *Yorktown*, requiring repairs after Coral Sea estimated to take 3 months, was made combat ready in an amazing 48-hour period at Pearl Harbor. These 3 fleet carriers could carry approximately 250 planes, about the same number as on Nagumo's 4 fleet carriers. Nimitz, detaching about one-third of his 76 warships to protect Alaska, planned to fight the main battle within air range of Midway and thus to be able to employ 109 additional Army, Navy, and Marine land-based planes based on that small island. In late May, the Pacific Fleet of some 50 vessels and submarines assembled north of Midway, unsighted by Yamamoto's submarine force, which did not establish its screen until June 1. Halsey was sick in hospital; his *Enterprise-Hornet* force was commanded by Rear Admiral **Raymond A. Spruance.** Fletcher, on the *Yorktown*, was in command at sea under Nimitz' supervision from the Pearl Harbor base.

1942, June 3–7. Operations in the Aleutians. The Japanese Northern Area Force, outmaneuvering Rear Admiral **Robert A. Theobald**'s protective force, bombarded Dutch Harbor twice (June 3 and 4), avoided attacks by American land-based planes, then landed small forces on the islands of Kiska (June 6) and Attu (June 7). Had it not been for the American realization that this was a diversion, these operations would have constituted a great Japanese success. As it was, very little was accomplished

except to leave some American military men with red faces, and to arouse further U.S. anger by this seizure of two bits of useless territory in the Western Hemisphere.

1942, June 4, 0300–0700. Battle of Midway—First Phase. Nagumo, confident in Yamamoto's conviction that there were no U.S. carriers in the Central Pacific and that most remaining American warships were rushing north to repel the Aleutian attack, launched half his attack force (108 planes) against Midway in early morning. From Midway, simultaneously, U.S. land-based planes rose both to strike the Japanese carriers and to attack the approaching bombers. Both these American efforts were repulsed with great loss, the American planes being inferior in speed to the Japanese aircraft. While half of the planes attacking the carriers were being shot down by Japanese defensive fighters, with no harm to



the carriers, Nagumo's bombers broke through the American screen at 6:30 A.M. and inflicted much damage on the island, sparing the runways, however, for their own expected later use.

1942, June 4, 0700–1700. Battle of Midway—Second Phase. Nagumo, receiving radio word from his Midway strike force that a second blow would be needed against the island, now began stripping his reserve planes of armor-piercing bombs and torpedoes, rearming with incendiary and fragmentation bombs—at least an hour's task. At that moment a search plane sighted and reported a formation of large American warships to the northeast. Startled Nagumo began rearming his reserve planes for naval action, while at the same time his Midway force was being retrieved on the carrier decks. He was steaming with his 4 carriers in box formation, each surrounded by protecting battleships, cruisers and destroyers. He shifted course 90° to the east to meet the new threat. Fletcher, meanwhile, had ordered Spruance's *Enterprise* and *Hornet* planes to be launched against the Japanese carriers at 7 A.M. The *Yorktown*, several miles to the east, launched half its planes at 7:30. Spruance's dive bombers, overshooting the new Japanese course, missed Nagumo's carriers in the overcast. But the American torpedo bombers found them and came in, without fighter cover, to be almost completely destroyed by antiaircraft fire and fighter planes at about 9:30. Not a single American hit was scored. Nagumo, assuming victory to be in his grasp, was still feverishly rearming and refueling planes on his carriers' cluttered decks when the American dive-bomber squadrons found him—*Enterprise*, *Hornet*, and *Yorktown* in turn. By 10:25, 3 Japanese carriers—*Akagi*, *Kaga*, and *Soryu*—were flaming wrecks. The fourth, *Hiryu*, undamaged, went steaming northeastward, sending her reserve planes to seek the American carriers. They found the *Yorktown* just after noon and hit her with 3 bombs. The *Hiryu*, meanwhile, had rearmed the planes which had struck Midway, and these also attacked the *Yorktown*, scoring 2 fatal torpedo hits. Fletcher abandoned his helpless and listing ship at 3 P.M. But searching American planes had located the Japanese carrier, and from the *Enterprise* a 24-dive-bomber strike—planes hurriedly retrieved from the earlier fight—mortally damaged the *Hiryu*, which burst into flames. It was now 5 P.M., the main battle over. Japan had lost her entire carrier force in being; the U.S. still had 2 in commission.

1942, June 4–5. Battle of Midway—Third Phase. Yamamoto, thunderstruck by a calamity in part due to his own separation of his fleet into several unsupporting forces, nevertheless hoped to retrieve the disaster. Pushing eastward during the night with all of his big ships, still infinitely superior in surface strength to the Americans, he hoped to lure them into a surface battle. Spruance (to whom Fletcher had relinquished command after the *Yorktown* was abandoned) was aware of this danger, and instead of attempting to pursue had turned eastward during the night. After midnight Yamamoto realized that he could not trap the Americans and, lacking air protection, he ordered a general retirement westward.

1942, June 5–6. Battle of Midway—Closing Actions. For 2 days the Americans pursued the retreating Japanese by day, but avoided possible traps at night. American planes caused additional damage, but no major actions took place. Finally, with fuel running low, Spruance ended the pursuit and turned back toward Pearl Harbor. Meanwhile, the crippled *Yorktown* had remained afloat, and was being slowly towed back to Pearl Harbor when she was sighted and, with an accompanying destroyer, sunk by the Japanese submarine *I-168*. These were the only American vessels lost during the battle. Also lost were 132 land- and carrier-based planes, with a total of 307 Americans killed in the battle. Japanese losses were 4 carriers, 1 heavy cruiser, 275 planes, and 3,500 men killed.

COMMENT. *Midway was one of the decisive battles of history. The loss of her fleet carrier force deprived Japan of the initiative; henceforward she was on the defensive—attempting to hold the great spread of the Southern Resources Area and contiguous regions she had so handily won. The psychological effect*

on the heretofore ever-victorious Japanese Navy was significant. Tactically, the American operations were almost faultless; Fletcher, the senior officer present, wisely gave Spruance full control over his 2-carrier task force after his own flagship was put out of action. And Spruance made good. Nagumo, on the other hand, was the victim of circumstance and faulty intelligence. His decision to rearm his reserve planes for a second strike at Midway—which resulted in his carriers being caught with their decks crowded with planes—was fatal but perhaps inevitable in view of his lack of vital information. Up to that time he too had conducted his operation faultlessly, and the final strikes of Hiryu *planes against the* Yorktown *were planned and conducted with skill, gallantry, and determination. Two basic factors led to the result: first and foremost, American knowledge of the Japanese secret codes, which presented Nimitz with an accurate picture of Japanese intentions and dispositions; second, Yamamoto's original dispersion of his tremendous armada to fit his own estimate of probable American intentions and reactions. A minor but interesting sidelight to the battle was the successful transfer of command by both admirals from a sinking flagship to a cruiser: Nagumo from* Akagi *and Fletcher from* Yorktown.

Operations in the Solomons

1942, August 7. Amphibious Landings at Guadalcanal and Tulagi. (For background and land operations, see pp. 1247, 1248.) Over all commander of the Allied amphibious invasion of the Solomons was Vice Admiral Ghormley, with headquarters ashore at Nouméa. Commander afloat was Rear Admiral Fletcher, with a task force built round the carriers *Saratoga, Enterprise,* and *Wasp*. The amphibious force itself, comprising 4 U.S. cruisers, 3 Australian cruisers, 19 U.S. destroyers, and 19 troop transports, was commanded by Rear Admiral **R. K. Turner.** Surprise was complete; the Marines were put ashore on Tulagi and Guadalcanal, and within 24 hours had secured their objectives.

1942, August 7–8. Japanese Reaction. Admiral Inouye at Rabaul reacted promptly to reports of the Allied landings. Three separate air raids were made against the invasion force on the first afternoon, and though these caused little damage, they seriously interfered with the landing of supplies and reinforcements to the troops ashore. Meanwhile, a naval task force of 7 cruisers and 1 destroyer, under Vice Admiral **Gunichi Mikawa,** rushed southward through the "Slot," or central sound between the central Solomon chains. The following day, Japanese planes continued their intensive attacks, and a series of violent air battles raged over the sound between Guadalcanal and Tulagi, and the seas nearby, as Japanese planes also attempted to hit the American carriers. The carrier planes took a heavy toll of the attackers, but suffered substantial losses themselves. Fletcher decided, therefore, that he would withdraw his carriers from the area, since he feared his losses would make the carriers more vulnerable and would prevent him from providing adequate support to Turner's force and the Marines ashore. As a result of this faulty decision, Turner decided (August 8, evening) that he could not keep his vessels near Guadalcanal without air cover, but decided to continue unloading supplies for 1 more day.

1942, August 9. Battle of Savo Island. Mikawa's force, passing south of Savo Island into the sound between Guadalcanal and Tulagi (later known as Iron-bottom Sound), surprised Turner's patrolling cruisers shortly after midnight. In 32 minutes of battle characterized by excellent Japanese gunnery and shiphandling, 4 of the 5 Allied heavy cruisers engaged—1 Australian and 3 U.S.—were sunk and the fifth damaged. Mikawa, fearing American air attack with the dawn (he did not know that Fletcher had withdrawn his carrier force), broke off the engagement and headed for Rabaul, his ships practically unscathed and with only 37 men killed and 57 wounded. Allied casualties were 4 cruisers and 1 destroyer sunk, 1,270 officers and men killed, and 709 wounded. On the way back, an American submarine, *S-44,* took the one substantial toll of Mikawa's command, the heavy cruiser *Kako,* small price for the most humiliating defeat ever suffered in fair fight by the U.S. Navy. Later that day, Admiral Turner departed with the remnant of his warships

and all the transports, still only partly unloaded.

COMMENT. *Turner's disposition of his warships in 3 packets to guard all 3 entrances to Ironbottom Sound was faulty, setting up conditions for defeat in detail accomplished later by Mikawa's bold attack. Turner's controversial abandonment of the Marine division, taking with him the greater part of its supply and all heavy ordnance and construction equipment, was justified by Fletcher's prior departure with the carrier force (approved by Ghormley), leaving the amphibious flotilla bare to air attack.*

1942, August 10–23. Force Build-up on Guadalcanal. The Japanese sent in scattered reinforcements and supplies to their small force on Guadalcanal, mostly by fast destroyers which traveled through the Slot only by night. At the same time, the American Marines were receiving supplies by destroyer transport; the captured Japanese airfield (renamed Henderson Field) was completed, and planes brought in (August 20). During this time, long-range air battles were taking place over the island, Japanese planes coming from Rabaul and the northern Solomons, American planes from the New Hebrides. The Japanese failure to take advantage of the withdrawal of the American Navy and undertake an immediate, large-scale land build-up on Guadalcanal, and to make an overwhelming land and naval assault on the Marine positions, was a serious mistake.

1942, August 22–25. Battle of the Eastern Solomons. The next major action was precipitated by a Japanese decision to send a small convoy of destroyers and transports, under Rear Admiral **Raizo Tanaka,** carrying 1,500 reinforcements to Guadalcanal. To provide support and air cover, a Japanese squadron, built around the fleet carriers *Shokaku* and *Zuikaku* and light carrier *Ryujo*, under Admiral **Nobutake Kondo,** steamed toward the Solomons from Truk. The Japanese, because of Midway, had changed their code (although they were not certain that it had been compromised), but increased radio activity warned the Americans of a major operation impending. Ghormley ordered Fletcher's carrier force to intercept. Fletcher, misled by faulty intelligence, permitted the *Wasp* group to leave for a fueling rendezvous, reducing his strength by one-third. On making contact, Fletcher's planes sank the *Ryujo*, which was attacking Henderson Field. In so doing he left himself open to attack by the 2 large Japanese carriers (August 24). The American carriers were operating in independent groups. The Japanese air attack fell first on *Enterprise*, getting through the fighter air cover and doing much damage. No attackers reached *Saratoga*, and the new big battleship *North Carolina*'s antiaircraft fire drove off bombing thrusts. A small flight of *Saratoga*'s planes badly damaged a Japanese seaplane carrier, but the Americans could not find the Japanese fleet carriers. Fletcher now broke off contact, his loss being 17 planes and the damage to the *Enterprise*. Kondo gave up after a short pursuit and called his battleships and cruisers in. Meanwhile, Tanaka's destroyers, having put the reinforcements ashore, bombarded Henderson Field. Next day the Marine air group from Henderson Field damaged Tanaka's flagship, and an army B-17 sank a destroyer. Tanaka withdrew. Technically, the battle was a draw, since both naval carrier forces remained intact. The Japanese had accomplished their mission, but the loss of a light carrier and 90 carrier planes was a severe blow.

1942, August 31. Damage to the *Saratoga*. Torpedoed by the submarine *I-26*, the carrier was put out of action for 3 months, leaving only the *Wasp* fit for combat in the South Pacific.

1942, September 15. End of the *Wasp*. Admiral Ghormley had decided to reinforce the 1st Marine Division. His depleted carrier force escorted the 7th Marine Regiment, in 6 transports, leaving Espiritu Santo, New Hebrides (September 14). Japanese submarines *I-15* and *I-19* intercepted the force. The *I-15* damaged the battleship *North Carolina* and sank a destroyer, while *I-19* put 2 torpedoes into the *Wasp*, sending her to the bottom. Admiral Turner boldly continued to Guadalcanal, landing the reinforcements safely (September 18). Both sides now strove to reinforce their troops ashore. Their next efforts met head on.

1942, October 11–13. Battle of Cape Esperance. Admiral Turner with 2 big transports and 8 destroyer transports carried a reinforced regiment of the Army's Americal Division to Guadalcanal. Escorting was Rear Admiral **Norman Scott** with 5 cruisers and 5 destroyers. At the same time, a Japanese transport force—2 seaplane carriers and 6 destroyers carrying men, ammunition, and matériel—was coming down the Slot escorted by 3 heavy cruisers and 2 destroyers. Scott, forewarned, moved to intercept. He surprised the Japanese armada just before midnight, sinking 1 cruiser and a destroyer and crippling 2 more cruisers in gun and torpedo fight illuminated by American search planes. Rear Admiral **T. Joshima** safely landed his troops, losing two destroyers to land-based bombers from Henderson Field as he withdrew. Turner, arriving under cover of the naval battle, also safely landed his reinforcements.

1942, October 13–15. Surface Bombardment of Henderson Field. The battleships *Kongo* and *Haruna,* supported by several cruisers and destroyers, successfully bombarded the Marine perimeter on Guadalcanal, while more Japanese reinforcements were being landed on both sides of the position. A similar bombardment the following night by cruisers under Admiral Tanaka covered the arrival of more Japanese troops. The Japanese had reestablished effective control over the seas around Guadalcanal.

1942, October 18. Change in American Command. Vice Admiral Halsey replaced Ghormley as commander of the South Pacific Area. About the same time, Rear Admiral **Thomas C. Kinkaid** relieved Fletcher in command of the carrier force, which now comprised the *Hornet* and the hastily repaired *Enterprise* (this amazingly durable vessel becoming famous as the "Big E").

1942, October 23–25. Yamamoto's Plans. Yamamoto had placed 2 heavy and 2 light carriers under Kondo's command in the South Pacific; with these he expected to defeat the Americans in a climactic navalair battle for control of the southern Solomons. He was reluctant to risk the precious carriers in action, however, without a good land airfield nearby, from which land-based planes could provide support and where valuable carrier pilots could take refuge if their carrier should be sunk or damaged. Because of their troop build-up on Guadalcanal, the Japanese were confident that Henderson Field could be wrested from the Marines. Once this was done, the carriers could close with the American fleet, while land-based planes rushed down from Rabaul. As the land forces engaged in a bitter battle for control of Henderson Field (see p. 1249), Kondo's fleet moved cautiously south from Truk. Kinkaid's force, with equal caution, circled north of the Santa Cruz Islands.

1942, October 26–27. Battle of the Santa Cruz Islands. While the Japanese land attack on Henderson Field was being repulsed (see p. 1249), Kinkaid obeyed Halsey's radioed orders to carry the fight to the Japanese fleet. In fact, both carrier forces launched simultaneous strikes against each other, the strike forces passing in midair; several American planes were shot down by Japanese escort fighters. The Americans damaged the light carrier *Zuiho* and severely damaged the *Shokaku* (put out of action for 9 months). The *Hornet* was hit even more seriously and had to be towed out of action by a cruiser. The *Enterprise* was hit and badly damaged by a second strike from the 2 remaining Japanese carriers. The Americans were now forced to withdraw. As the pursuing Japanese came closer, the *Hornet* had to be abandoned, and she was sunk by Japanese destroyers. Kondo then withdrew. The Japanese had won a clear-cut victory, but a Pyrrhic one, since they lost 100 planes, about half again as many as the American loss, and this still further depleted their thinning ranks of good carrier pilots. Furthermore, by failing to pursue and possibly to destroy the damaged "Big E," Kondo had made a serious mistake.

1942, November 12–13. Naval Battle of Guadalcanal—First Phase. A reinforcement contingent of 13,000 men in 11 transports, protected by 11 destroyers under Admiral Tanaka, was approaching Guadalcanal. To cover the approach of this reinforcement group, Admiral

Kondo sent a powerful squadron of 2 battleships, 2 cruisers, and 14 destroyers under Vice Admiral **Hiroaki Abe** to shell Henderson Field. The carrier force, steaming north of the Solomons, provided air cover. At the same time, American reinforcements arrived at Guadalcanal, convoyed by Admiral Turner, and escorted by 5 cruisers and 8 destroyers under Rear Admiral **Daniel J. Callaghan** (November 12). Learning of the approach of Tanaka's and Abe's forces, Callaghan, with Admiral Turner's approval, moved to intercept, counting on surprise to overcome his serious numerical disadvantage. Kinkaid's carrier force (with only one carrier, the damaged *Enterprise*, with a tender tied alongside actually making repairs as the force steamed toward Guadalcanal to cover Turner's retreating transports) was too far away to take part in the action. Though he had radar (which the Japanese did not), Callaghan misused it and was as surprised as the Japanese when Abe's force entered Ironbottom Sound shortly after midnight and suddenly discovered the Americans. One of the most confused and furious naval actions of history followed. The intermingled forces blazed away at each other in the darkness, sometimes at point-blank range. After 36 minutes, survivors of both sides pulled apart. The battleship *Hiei* was left helpless (to be sunk after dawn by *Enterprise* planes en route to Henderson Field), 2 Japanese cruisers were sunk, and all the other Japanese vessels were damaged. Two American cruisers and 4 destroyers were sunk, another cruiser and a destroyer were close to sinking, and all other American ships save 1 were damaged. Admiral Callaghan and Admiral Scott were both killed. Tactically a draw, this first phase of the battle was strategically an American success, since the planned bombardment of Henderson Field had been repulsed, and Tanaka's convoy had to turn back to the Shortland Islands.

1942, November 13–14. Naval Battle of Guadalcanal—Second Phase. During the following day, air activity was intensive on both sides. Before dark Tanaka again started south with his reinforcement convoy. After dark, 2 Japanese heavy cruisers, part of a cruiser force under Admiral Mikawa, entered Ironbottom Sound, unopposed, to shell Henderson Field. The following morning the air activity stepped up further, with the Americans concentrating on Tanaka's convoy and Mikawa's cruisers. Seven of Tanaka's transports and 2 of Mikawa's cruisers were sunk. Tanaka persevered, however, continuing toward Guadalcanal with his remaining transports, while Admiral Kondo, with the battleship *Kirishima*, 4 cruisers, and 9 destroyers, raced south to cover Tanaka's approach, intending to bombard Henderson Field.

1942, November 14–15. Naval Battle of Guadalcanal—Third Phase. Kinkaid sent Rear Admiral **Willis A. Lee,** with the battleships *Washington* and *South Dakota* and 4 destroyers, to intercept the Japanese. The opponents met at close range in Ironbottom Sound, just south of Savo Island. Two of the American destroyers were quickly sunk and the other 2 put out of action. The 2 battleships, however, closed boldly with the Japanese, who concentrated their fire on the *South Dakota*, causing an electrical power failure and putting her out of action for the rest of the engagement. Briefly it was a battle between the *Washington* and 14 Japanese warships. The odds were quickly lessened, however, as Lee calmly concentrated the *Washington*'s radar-directed guns against the *Kirishima*, leaving her and a destroyer in sinking condition. Kondo now withdrew. The naval Battle of Guadalcanal was ended. Though Tanaka had succeeded in putting 4,000 troops ashore, and rescued 5,000 more on his return to Rabaul, the main result of this 3-day battle was to return to the Americans effective control of the waters around Guadalcanal, thus assuring final victory in this crucial land and naval campaign. The Japanese went on the defensive in the southern Solomons.

1942, November 30. Battle of Tassafaronga. Tenacious Tanaka continued to prove, however, that the victory would not come cheaply. An American force of 5 cruisers and 7 destroyers under Rear Admiral **Carleton H.**

Wright moved to meet Tanaka's "Tokyo Express," this time 8 destroyers carrying supplies for the Japanese garrison of the island. Warned by radar of the Japanese approach into Ironbottom Sound, the Americans opened fire and sank the leading destroyer. But Tanaka promptly and skillfully turned his entire squadron toward the Americans, fired several torpedoes each, then scampered north without further loss. They left 1 American cruiser sunk and 3 more badly damaged, with a total of 400 dead sailors.

1943, January 29–30. Battle of Rennell's Island. An American squadron of 6 cruisers, 8 destroyers, and 2 escort carriers, under Rear Admiral **Robert C. Giffin,** was cruising north of Guadalcanal in hopes of enticing gathering Japanese naval forces in the northern Solomons (actually preparing to cover the evacuation of Guadalcanal) into battle. The Japanese did not take the bait; instead, Yamamoto ordered 2 very successful land-based air strikes against the Americans. The first, at dusk, January 20, disabled the *Chicago.* Late the next afternoon, while the Americans were withdrawing southward, the Japanese again hit the *Chicago,* while in tow, and sank her.

1943, February 1–7. Japanese Evacuation of Guadalcanal. Rear Admiral **Koyanagi** (who had replaced Tanaka) brilliantly and skillfully evacuated about 13,000 Japanese troops from Guadalcanal without being detected by the Americans.

COMMENT. *Not since the Anglo-Dutch wars had 2 powerful navies engaged in such a prolonged, intensive, and destructive naval campaign as that which took place for 6 long months around Guadalcanal. Serious mistakes were made on both sides, and the honors were approximately even in skill and gallantry displayed. The margin of the American success was their eventual superiority of numbers and of equipment, both on the surface and in the air.*

Operations in the Indian Ocean

1942, March 23. Seizure of the Andamans. This provided the Japanese with a secure convoy route from Singapore to Rangoon.

1942, March 25. Appearance of the First Air Fleet. Admiral Nagumo with 5 carriers (veterans of Pearl Harbor and Darwin) accompanied by 4 fast battleships and several cruisers and destroyers sailed westward into the Indian Ocean. His mission was to strike British naval bases in Ceylon, and to destroy all British naval and merchant shipping he could find in the ocean and the Bay of Bengal.

1942, March 27–April 2. British Reaction. Admiral Sir James Somerville's British Far Eastern Force consisted of 5 battleships—4 of them old and slow—3 small carriers, 8 cruisers, and 15 destroyers. Upon learning of Nagumo's approach, Somerville sailed southeast from Ceylon to meet him, but the fleets passed each other without contact. Realizing that he had missed his enemy, Somerville turned back to Addu Atoll, in the Maldives, to refuel. Here he came to the conclusion that it would be suicidal to attempt a formal battle against the superior and faster Japanese fleet; accordingly, he sent his 4 old battleships back to the coast of Africa, attempting to harass the Japanese with his remaining vessels while avoiding a major battle.

1942, April 2–8. Action off the Coasts of Ceylon and India. Japanese carrier aircraft struck the bases of Trincomalee and Colombo, causing damage to the installations, but being heavily engaged by RAF fighter planes. During a week of confused fighting, the Japanese carrier aircraft sank 1 British carrier, 2 cruisers, a destroyer, and several merchant ships. In their several engagements with the RAF and with British carrier aircraft, the Japanese inflicted substantial losses, but suffered heavily themselves as well. Finally, satisfied that he had carried out his mission, and feeling the necessity to rebuild his depleted air strength, the Japanese admiral sailed back toward the Pacific (April 8).

COMMENT. *In 4 months of war, the First Air Fleet had operated across one-third of the globe and had sunk 5 battleships, 1 carrier, 2 cruisers, 7 destroyers, and damaged many more, to say nothing of other destruction, without one of its own vessels having been damaged.*

1942, April–May. British Concern about Africa. Nagumo's demonstration that Japan

could control the Indian Ocean at will caused great worry to Churchill and British military leaders regarding the security of the African coast and of the sea routes to India. Fearing that the Japanese might try to gain control of French Madagascar as they had of Indochina, the British decided they would forestall them.

1942, May 5–7. Assault on Diégo-Suarez. A British amphibious force under Rear Admiral **Edward N. Syfret** assaulted and captured the Vichy French port at the northern tip of Madagascar. They hoped no further action on Madagascar would be necessary.

1942, May 29–30. Japanese Activity off Madagascar. A Japanese seaplane (submarine launched, though this was not known at the time) was sighted over Diégo-Suarez (May 29). The following night a midget submarine (also launched from a large submarine) damaged HM battleship *Ramillies* and sank a tanker in the harbor. The British feared that the Japanese were using secret bases elsewhere on Madagascar, and so decided to seize the entire island.

1942, September–November. British Conquest of Madagascar. Following amphibious landings at **Majunga** (September 10) and **Tamatave** (September 18), the British, under Lieutenant General Sir William Platt, moved against the capital, Tananarive. The French were forced to surrender (November 5). The British later turned the island over to the Free French (January 8, 1943).

The War Against Japan, 1943

Strategy and Policy

By the end of 1942 the Axis tide was clearly receding in Europe and North Africa, and was ebbing slightly in the Pacific. But the Japanese realized (as did the Allies) that this was merely a shifting from the offensive to the defensive, in accordance with a plan that had been set before they went to war. The setbacks in Papua and Guadalcanal had been unexpectedly costly, but this was attributed primarily to hasty, last-minute modifications in the original strategic plan, and the Japanese intended to make no such error again.

The defeat at Midway had been another matter, however, and the Japanese naval high command was apprehensive about the consequences of the carrier losses in that disastrous battle. These losses, furthermore, had been compounded by extremely heavy casualties among the remaining trained carrier pilots in the air battles around Guadalcanal.

Japanese military leaders hoped, however, that they could make good these losses by initiating an intensive new training program, while the Americans and their allies dashed themselves in costly assaults against the increasingly powerful jungle fortresses rimming the widespread Japanese defensive perimeter. They expected that the U.S. would become discouraged and would make peace, leaving Japan with most of her conquests.

There was no thought of a negotiated peace in America or Britain, however. While concentrating most of their efforts to achieve the defeat of Germany, the Allies were sufficiently encouraged by their limited successes in late 1942 to increase slightly the scale of effort against Japan. Among the Allied leaders, Admiral King was particularly determined to increase the momentum of operations in the Pacific, even though he did not directly question or subvert the primary effort against Germany. But America's naval strength was growing more rapidly than had been expected, both in relative and absolute terms. There were limits to the extent to which naval force could be used against Germany, and so most of this growing naval strength was allocated to the Pacific areas. Because it was obviously uneconomic for this tremendously

burgeoning power to remain idle, it was essential to match naval strength, at least to a limited degree, with additional land and air strength—particularly since these categories of military force were also increasing rapidly in America.

Thus, there was at least a partial deviation from the original strategy of remaining on the defensive against Japan, while concentrating full Allied strength against Germany. The increasing American effort was also recognized by a few Japanese as a demonstration of the United States' phenomenal industrial and operational war-making capability.

Land and Air Operations in Asia

Burma

General Wavell, commanding Allied forces in India, realized that he would not be ready for a major invasion of Burma until the dry season of late 1943 or early 1944. But he was worried about the psychological effect of the defeats suffered in Malaya and Singapore in 1942, and hoped during the dry season of 1942–1943 to revive the spirit of British troops by success in 2 small, carefully prepared offensives.

THE FIRST ARAKAN CAMPAIGN

1942, December–1943, January. Advance into Arakan. The 14th Indian Division* advanced into Arakan, northwest coastal province of Burma, separated from the remainder of Burma by jungled mountains. Moving cautiously, the British gave the outnumbered Japanese time to construct strong defenses north of Akyab.

1943, January–March. Stalemate at Akyab. With the assistance of reinforcements rushed by General Iida, the Japanese repulsed repeated British attacks with heavy losses.

March–May. Japanese Counteroffensive. The Japanese 55th Division counterattacked from Akyab, while other Japanese units worked their way over supposedly impassable mountains to strike the British left and rear (March 13–17). The 14th Division retreated in considerable confusion. Though reinforcements were rushed to the front, the British could not stop the Japanese infiltrating tactics. The campaign ended where it had started, with the Japanese still occupying Arakan (May 12).

COMMENT. *Instead of rebuilding confidence, the First Arakan Campaign had made British troops still more fearful of Japanese jungle-fighting ability.*

*Elements of the Indian Army included British and Indian units, but were operationally controlled as integral British Army units.

FIRST CHINDIT RAID

Brigadier **Orde C. Wingate** obtained the approval of General Wavell to demonstrate his concept of "long-range penetration" with his 77th Indian Bridgade. It was his belief that small British ground forces, supplied by air, could operate for extended periods deep behind enemy lines, cutting communications, destroying supplies, and creating general confusion. This seemed to him, and to Wavell, a way of beating the Japanese at their own game of infiltration and encirclement.

1943, February 18. Crossing the Chindwin River. Entering Japanese-controlled territory, the 77th Brigade (known later as "Chindits")* split up into several small columns and set out to cut the Mandalay-Myitkyina and Mandalay-Lashio railroads.

1943, March 18. Crossing the Irrawaddy River. Having temporarily interrupted the Mandalay-Myitkyina railroad, Chindit columns pushed on to cross the Irrawaddy. They had now aroused the Japanese, however, and encountered increasing opposition.

1943, April. Withdrawal of the Chindits. As losses mounted, Wingate gave up his plan to cut the Mandalay-Lashio railroad. The Chindits retreated with considerable difficulty back to India in small groups. Losses totaled more than 1,000 men, over one-third of the total force engaged.

COMMENT. *The Chindit raid was a military failure, the losses far too heavy to justify the slight damage inflicted, which was quickly repaired by the Japanese. However, the fact that British troops had successfully raided behind the Japanese lines, then fought their way out again, was hailed by the newspapers as a great Allied victory. Thus, psychologically, the raid went far to offset the discouraging results of the Arakan operation. The total effect of the 2 operations, however, was to convince Wavell and other British leaders that no major British invasion of Burma was possible prior to the dry season of 1944–1945.*

OPERATIONS IN NORTH BURMA

1943, February. Chinese Troops to the India-Burma Border. As Japanese spearheads pressed closer to the India-Burma border in the Hukawng Valley area of north Burma, Stilwell feared that they might attempt to raid into upper Assam (northeast India), where American, Chinese, and Indian engineers were beginning to push a road toward the border from Ledo. He therefore moved most of the rebuilt, retrained Chinese 38th Division from Ramgarh to protect the road-building operations. There were minor clashes of patrols in the mountains just inside Burma. The Japanese withdrew back into the Hukawng Valley.

1943, October—November. Return to Burma. Bitterly disappointed by British and Chinese failure to undertake a major invasion of Burma in 1943–1944 to reopen the land route to China (see above and p. 1264), Stilwell decided that he would initiate the effort with the resources at his disposal. He obtained the reluctant approval of Wavell and Chiang Kai-shek. The 38th Division pushed southeastward through the mountain spine of the India-Burma border into the Hukawng Valley. All supplies were dropped by air. The 22nd Division was moved up from Ramgarh to Ledo and the border area. Work on the road from Ledo intensified as more American engineers arrived, and dry weather permitted more rapid progress.

1943, November 23–December 23. Stalemate. As elements of the Chinese 38th Division advanced in the Hukawng Valley, they were struck by a Japanese counterattack. Three battalions were surrounded and the advance came to a complete halt, though the Japanese were unable to overrun the 3 isolated units, which were maintained by American air supply.

1943, December 24–31. Stilwell Resumes the Advance. The arrival of General Stilwell, and also of some light pack artillery, inspired the Chinese to counterattack, relieving the beleaguered battalions and clearing the valley west of the Tarung River.

* The nickname had two origins: their emblem was a *chinthe*, a mythical Burmese beast resembling a lion; they operated beyond the Chindwin River.

China

The growing weakness of isolated China was repeatedly demonstrated by easy Japanese successes in minor local offensives. These operations were planned by the Japanese to give

experience to newly raised units, and also to seize rice crops in unoccupied China. By these "rice offensives" they were able to get food easily for themselves, while denying it to Chiang's starving people and soldiers. Toward the end of the year, however, with increased American air support (see below) the Chinese repulsed one of these Japanese rice offensives in Hunan by a victory at the **Battle of Changteh** (November 23–December 9).

Although the arrival of additional American transport planes added greatly to the quantity of supplies flowing to China over the Hump during the year, these were totally inadequate to meet the many conflicting needs of China and of the war effort. This led directly to 2 serious disputes involving American leaders in China.

Chennault's China Air Task Force (the only American unit in China; see p. 1244) was having success comparable to that which he had earlier gained with his Flying Tigers, inflicting losses of more than 10 aircraft on the Japanese for every 1 they lost. But because of the restrictions on supplies over the Hump, Chennault felt that he had not had an opportunity to prove the potential of his force, which he believed could win the war in China unaided. He insisted that he should receive all, or most, of the Hump supplies. Stilwell, however, ordered that a substantial proportion of the Hump tonnage should go to the Chinese Army, since it would need supplies to attack north Burma from the east while his troops in India attacked from the west. Chiang, already displeased with Stilwell, supported Chennault, who finally won the argument when he also obtained the support of President Roosevelt. He was promoted to major general, and his command was enlarged and redesignated the Fourteenth Air Force (March 11).

With his increased share of the increasing Hump tonnage, Chennault's growing Fourteenth Air Force was able during the remainder of the year to gain air superiority over most of China. His bombers ranged as far as Formosa, inflicting severe losses on the Japanese.

Because of the diversion of supplies from the Chinese Army to the Fourteenth Air Force, Chiang would not permit Chinese troops in China to participate in Stilwell's planned 2-prong offensive into north Burma. Only with reluctance would he give his assent to the advance of Chinese troops from India, since this would not interfere with Hump supplies to China.

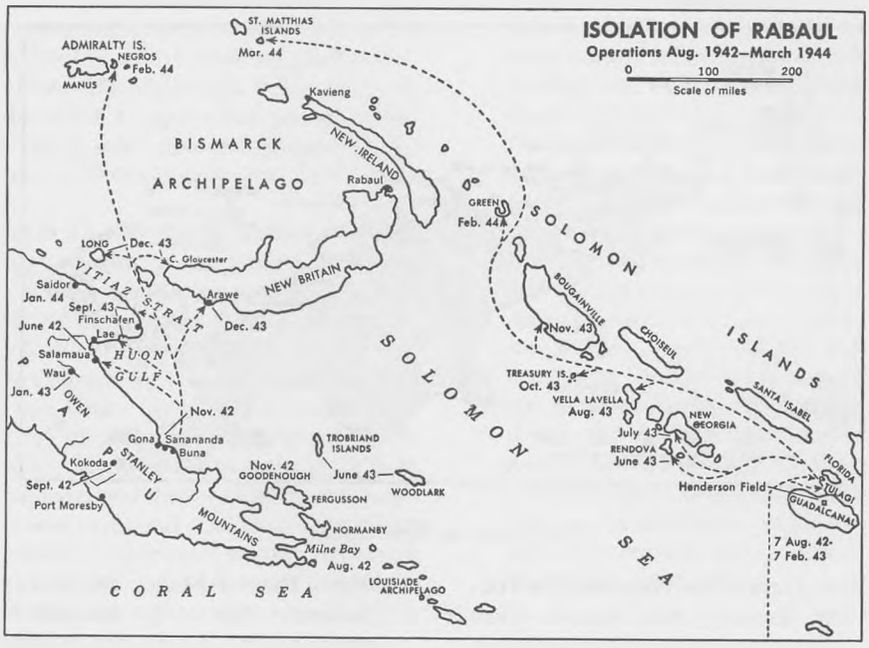
Deteriorating relations between the National Government and the Communist regime at Yenan had, by this time, led Chiang to establish a *de facto* blockade of Communist-held regions of China. This had required the diversion of a substantial number of divisions from the war effort against Japan. Stilwell complained about this diversion, which further increased the tensions between the 2 men.

Operations in the South and Southwest Pacific

Japanese Defensive Plans. Realizing that their defensive perimeter was threatened by Allied successes on Guadalcanal and Papua, the Japanese began to strengthen Rabaul, the southeastern anchor of their defensive perimeter, with outposts on the Huon Gulf in northeast New Guinea and in the Solomons as far south as New Georgia Island. New Guinea, the Bismarcks, and the Solomons were under navy control, with Vice Admiral **Jinichi Kosaka** commanding. Under him was the 8th Area Army (Lieutenant General **Hitoshi Imamura**), with the Eighteenth Army (Lieutenant General **Hotaze Adachi**) in New Guinea and the Seventeenth (Lieutenant General **Iwao Matsuda**) in the Solomons. Because Allied forces in this region were the most immediate threat to the Japanese perimeter, Admiral Yamamoto, commander of

the Combined Fleet, with headquarters at Truk, gave close personal supervision to the defensive measures (see p. 1258).

Allied Offensive Plans. With Rabaul the obvious primary Allied objective, Admiral Halsey's forces of the South Pacific Area, now designated the U.S. Third Fleet, were shifted from the command of Admiral Nimitz to that of General MacArthur for a coordinated Allied two-pronged offensive against Rabaul. Halsey's forces were to drive northwestward through the Solomons, while General **Walter Krueger**'s U.S. Sixth Army, under the direct supervision of General MacArthur, was to advance northward through northeast New Guinea and the island of New Britain toward the Japanese base. Complicating the command arrangements was the fact that Halsey, while under the strategic direction of MacArthur, was still dependent upon his own naval commander in chief, Admiral Nimitz, for ships, troops, aircraft, and the logistic means necessary to operate tactically. That the 2 operations worked smoothly was due to the spirit of cooperation and tolerance displayed by all concerned, with examples set by MacArthur and Halsey.



New Guinea and New Britain, 1943

1943, January 9. Wau. A brigade of Australian General Hering's New Guinea Force, airlifted to a mountain airstrip at Wau, 30 miles west of Salamaua, established a forward base, threatening that Japanese coastal holding while MacArthur built up strength for an offensive.

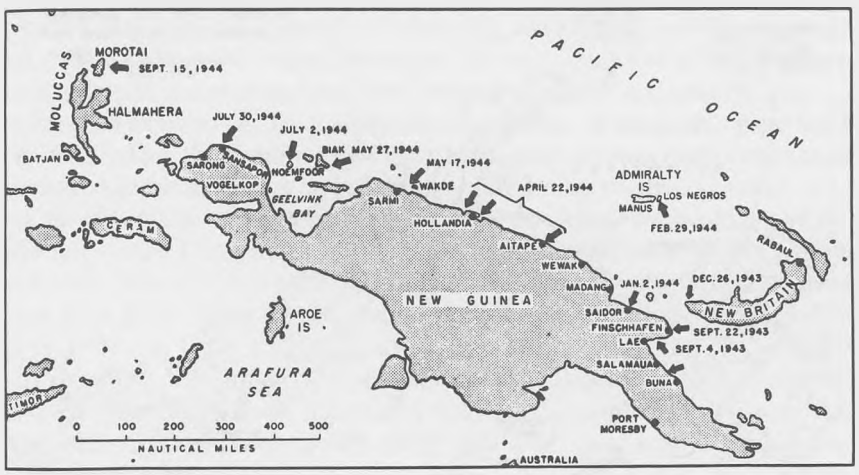
1943, June 30. Feint at Salamaua. An American amphibious landing at Nassau Bay, south of Salamaua, and demonstrations from Wau indicated a full-scale assault to come. At the

same time, MacArthur dispatched elements of Krueger's Sixth Army to take and occupy the Trobriand-Woodlark island group in the Solomon Sea, north of Papua's eastern tip, securing new airfields.

1943, September 4–16. Lae and Salamaua. Australian General Sir **Thomas Blamey** took over command of the New Guinea Force. American and Australian troops made an amphibious landing east of Lae. Two days later, a U.S. paratroop regiment dropped at Nadzab in the Markham River Valley, to the northwest. The Australian 7th Division was immediately airlifted in to reinforce, and a converging approach began on Lae. Meanwhile, the Allied forces in front of Salamaua increased their activity. The Japanese garrisons began abandoning both places. Salamaua was occupied (September 12) and Lae fell 4 days later.

1943, September 22–October 2. Finschhafen. A quick ground and amphibious advance around the tip of the Huon Peninsula encircled Finschhafen (September 22), which fell October 2. The way was paved for amphibious operations against New Britain.

COMMENT. *This campaign was a splendid example, on a small scale, of combined operations—land, sea and air, featuring deception and surprise. Lieutenant General* **George C. Kenney**'s *U.S. Fifth Air Force isolated the enemy from his strongholds at Madang, Wewak, and Rabaul, while also providing direct support to the ground forces. Of some 10,000 Japanese troops engaged, more than half had been killed, the rest dispersed in the jungle.*



Operations on New Guinea

1943, October–December. New Britain Toehold. While Blamey's New Guinea Force blocked off the Huon Peninsula, protecting reorganization, Krueger's Sixth Army took over the next task. Elements of the U.S. 1st Cavalry Division* landed (December 15) at Arawe on southern New Britain, where a base was established. The 1st Marine Division, put ashore (December 26) by the Seventh Amphibious Force, secured a successful beachhead and 2 airfields at Cape Gloucester on the northern side after 4 days of stiff fighting in which more than 1,000 Japanese were killed.

* This division was actually an infantry formation, though retaining its prewar designations and organization.

Central and Northern Solomons

1943, February–June. Preparations. Following the conquest of Guadalcanal, there was a

lull in surface operations while Halsey reorganized his command and prepared to set in motion the eastern arm of MacArthur's pincers. Elements of the U.S. 43rd Division seized Russell Island (February 11).

1943, June 30. Capture of Rendova Island. Artillery was quickly landed in range of nearby New Georgia.

1943, July 2–August 25. Assault on New Georgia. Supported by guns from Rendova and by a naval task force, troops of the U.S. 37th and 43rd Divisions, reinforced by Marine battalions, landed near Munda. They were commanded by Major General **John H. Hester** (later by Major General **Oscar Griswold**). Since Munda, commanded by General **Noboru Sasaki,** was now the principal Japanese air base in the Solomons, the attacks were fiercely contested in the bitterest sort of jungle fighting. The U.S. 25th Division was also committed (July 25). Griswold, regrouping his forces, launched a coordinated assault on the airfield, which was captured (August 5). All resistance on New Georgia soon ended (August 25).

1943, August 15–October 7. Vella Lavella. A regimental combat team landed on Vella Lavella, leapfrogging Kolombangara, next Japanese airfield of importance, and an American advanced airbase was prepared. Elements of the New Zealand 3rd Division, replacing U.S. troops on Vella Lavella (mid-September), swept away the last remnants of the Japanese garrison. The Japanese began withdrawal from Kolombangara, and the Central Solomons operation came to an end (October 6–7). Allied losses (mostly American) in this campaign were 1,136 killed and 4,140 wounded. More than 2,500 Japanese dead were counted of the 8,000 engaged.

1943, October–December. Bougainville. South of Rabaul, the Japanese grip on the Solomons now included only Choiseul and Bougainville. A feint assault (October 27) on Choiseul by a small Marine expedition (quickly withdrawn) momentarily obscured intentions. That same day the Treasury Islands were seized as staging area for a move on Bougainville, and from it (November 1) the 3rd Marine Division sprang ashore at Empress Augusta Bay against light resistance. By the year's end, Empress Augusta Bay had become an Allied naval base. Three airfields were in operation. All this was embedded in a defensive perimeter some 10 miles wide and 5 miles deep, now under General Griswold's Army control.

Naval Operations

OFF THE COAST OF NEW GUINEA

1943, January–June. The Seventh Fleet. The small American and Australian naval forces in MacArthur's Southwest Pacific Area were reorganized as the Seventh Fleet under the command of Vice Admiral **A. S. Carpender.** The principal missions of this fleet were to gain and keep control of the coastal waters of New Guinea, and to support MacArthur's ground troops in forthcoming amphibious operations. The actual conduct of the amphibious operations was a mission of the subordinate Seventh Amphibious Force (Rear Admiral **Daniel E. Barbey**), a collection of gunfire-support warships, troop transports, amphibious vessels, and landing craft, and including highly trained Army Engineers and Navy Seabees, whose task was to clear beach obstacles and to organize beachhead administration and supply.

1943, June–December. Amphibious Operations. The Seventh Fleet (commanded after August by Vice Admiral Thomas C. Kinkaid) and its Seventh Amphibious Force played key roles in the numerous amphibious operations along the coasts of New Guinea and New Britain (see pp. 1265–1266).

IN THE WATERS OF THE SOLOMONS

1943, February–June. Reorganization and Preparation. While waiting for reinforcements to permit him to continue operations northward from Guadalcanal, Admiral Halsey reorganized his South Pacific Forces into the Third Fleet. Initially the Third Amphibious

Force was commanded by Admiral Turner. Its organization and mission were similar to those of the Seventh Amphibious Force.

1943, June–December. Amphibious Operations. The Third Fleet and Third Amphibious Force (commanded by Rear Admiral **Theodore S. Wilkinson** after July) made leapfrog advances through the Solomons (see p. 1266). The Third Fleet was still opposed by substantial Japanese naval forces, leading to numerous surface actions, most of which (at Japanese initiative) took place at night.

1943, July 5–6. Battle of Kula Gulf. An American light cruiser squadron under Rear Admiral **W. L. Ainsworth** and a Japanese force of 10 destroyers under Rear Admiral **T. Akiyama** met. One U.S. cruiser was sunk; one Japanese destroyer was sunk and another ran aground (and was later destroyed). Despite U.S. superiority in gun power and armor, and the advantage of radar, superior Japanese night-fighting tactics and superior torpedoes gave them the best of this encounter.

1943, July 12–13. Battle of Kolombangara. In another night engagement, in almost the same waters, Japanese Rear Admiral **S. Izaki**'s squadron of 1 cruiser, 5 destroyers, and 4 destroyer transports met Ainsworth's force of 3 light cruisers and 10 destroyers. Again the Japanese inflicted more serious losses than they received: 3 Allied cruisers damaged and a destroyer sunk, while the Japanese lost their cruiser.

1943, August 6–7. Battle of Vella Gulf. An American squadron of 6 destroyers sank 3 out of 4 destroyers in a Japanese squadron without any loss to themselves.

1943, October 6–7. Battle of Vella Lavella. Rear Admiral **M. Ijuin,** with 9 destroyers, covering smaller craft evacuating Japanese troops from Vella Lavella, was encountered by 6 American destroyers under Captain **F. R. Walker.** One Japanese destroyer was sunk, as were 2 American vessels. With American reinforcements arriving, and with the troops evacuated from Vella Lavella, Ijuin withdrew. This was the last clear-cut Japanese naval success against the Americans.

1943, November 2. Battle of Empress Augusta Bay. This night engagement was the result of an effort by a Japanese squadron of 4 cruisers and 6 destroyers, under Rear Admiral **Sentaro Omori,** to interfere with the amphibious landings on Bougainville (see p. 1267). Rear Admiral **Stanton A. Merrill** with 4 cruisers and 8 destroyers was waiting. Making excellent use of their radar superiority, the Americans attacked Omori's force from front and flanks. The Japanese were assisted by flares dropped by supporting aircraft, but lost 1 cruiser and 1 destroyer, with most of the other vessels damaged. Only 1 American destroyer was badly damaged.

1943, November 5 and 11. Carrier Strikes on Rabaul. Planes of Rear Admiral **Frederick Sherman**'s task force—fleet carrier U.S.S. *Saratoga* and light carrier *Princeton*—severely mauled a powerful cruiser and destroyer force under Vice Admiral **Takeo Kurita,** staging from Truk through Rabaul for refueling in preparation for another blow at the American Bougainville beachhead (November 5). Kurita had 6 cruisers and destroyers badly damaged, and called off his planned attack. A few days later (November 11) another air strike was made by planes from Rear Admiral **A. E. Montgomery**'s task group of the carriers *Essex, Bunker Hill,* and *Independence.* Japanese planes intercepted the attackers, but were overwhelmed, and further severe damage was done to the port and to Kurita's ships, which soon thereafter limped back to Truk.

1943, November 25. Battle of Cape St. George. Captain **Arleigh Burke** with 5 destroyers southeast of New Ireland in early morning darkness, sinking 3 Japanese vessels without damage to his own squadron.

COMMENT. *Having learned from earlier costly experience, the Americans had now established a clear-cut tactical superiority over the Japanese in night naval operations. This, combined with their superiority in all types of equipment save torpedoes, meant that the Americans would never again encounter serious or dangerous opposition in small cruiser and destroyer actions, day or night.*

Air Operations

NEW GUINEA AND THE BISMARCKS

1943, January–May. Struggle for Air Superiority. Lieutenant General **George C. Kenney**'s American-Australian Fifth Air Force was engaged during this period in a bitter struggle for air superiority with Japanese naval air units at Rabaul and with heavily reinforced air units of the Eighteenth Army. This resulted in a number of violent air battles and exchanges of strikes between the opposing airfields. By midspring the Allies had gained a clear-cut superiority.

1943, March 2–4. Battle of the Bismarck Sea. This was primarily an air-surface battle between Kenney's medium bombers and a Japanese squadron of 8 destroyers, escorting 8 troop transports with 7,000 soldiers bound from Rabaul to reinforce Lae. Despite persistent fog, which the Japanese had hoped would prevent effective air attack, the Allied planes came down close to the level of the sea to use a newly developed skip-bombing technique. The Allied planes sank 7 transports and 4 destroyers; the other transport was sunk by American PT boats. The 4 destroyers that escaped to Rabaul were badly damaged. The Allies lost 2 bombers and 3 fighters, the Japanese some 25 planes. More than 3,000 Japanese troops were drowned; about an equal number were rescued by the surviving destroyers and by Japanese submarines. The Japanese ceased further efforts to send merchant-ship convoys to New Guinea; all subsequent supply and reinforcement were done by fast destroyer transport.

1943, June–December. Air Support to Land Operations. During this period, Kenney's Fifth Air Force elaborated a pattern of support operations which it continued to follow in general throughout the remainder of the war. *First,* fighter planes and light bombers gained air superiority over the region where the next operation was planned to take place by attacking airfields and by endeavoring always to force Japanese planes to fight at a disadvantage. Simultaneously, longer-range bombers neutralized more distant Japanese air bases, sometimes in coordination with land-based or carrier aircraft from the South or Central Pacific areas. *Next,* Allied fighters and light bombers isolated the area to be attacked, making it impossible for Japanese troop transports or warships to land reinforcements. *Finally,* as MacArthur's troops advanced on land, or prepared for an airborne or amphibious operation, air attacks against ground targets in the area were intensified, these attacks continuing throughout the land battle. *In airborne operations,* troop-carrier aircraft flew paratroops to the objective, then shuttled back and forth to airlift supplies and reinforcements to the airborne troops. Meanwhile, engineers with the ground troops were engaged in improving existing airfields, or building new ones if necessary, so that fighter planes could move in to give more effective local air support. These fields also became the advanced bases for supporting the initial long-range air reconnaissance and air strikes for the next advance, the same general cycle of operations being repeated.

THE SOLOMONS

1943, January–April. Attrition of Japanese Air Strength. While ground operations in the Solomons temporarily came to a virtual halt after the American conquest of Guadalcanal, air activity continued intensively. The series of naval air losses that had begun at Midway, combined with growing American Army and Navy air strength in the Pacific, put the Japanese at a serious disadvantage. This was further accentuated by damaging Allied air blows from Henderson Field, from New Guinea, and from carrier raids against the complex of air bases around Rabaul.

1943, April 7–12. Japanese Air Counteroffensive. In an endeavor to regain air superiority and the initiative in the Solomons-Bismarcks area, Admiral Yamamoto sent most of the depleted carrier air squadrons to Rabaul from the fleet at Truk to take part in a

proposedly devastating aerial offensive against Allied bases in Papua and the Solomons. The attacks, however, inflicted relatively minor damaged, while Japanese losses were heavy.

1943, April 18. End of Yamamoto. The Japanese naval commander in chief, visiting the area to inspect conditions personally, flew from Rabaul to Bougainville. Halsey, forewarned by the usual intercept of Japanese communications (the code had again been broken), sent 16 U.S. Army Air Force fighters from Henderson Field to meet him. The 2 bombers carrying the Japanese admiral and his staff were shot down in flames. The death of Yamamoto, Japan's foremost strategist, was tantamount to a major Japanese defeat. Yamamoto was replaced as Commander in Chief of the Combined Fleet by Admiral **Mineichi Koga.**

1943, May–December. Decline of the Japanese Naval Air Force. In a few months the carrier air groups which Yamamoto had sent to Rabaul were practically wiped out. Their replacements were not so well trained and, as pilot experience and ability declined, casualties mounted. Because of this vicious cycle, Japanese air losses became staggering. By the end of 1943, Japan had lost nearly 3,000 planes and pilots in the Solomons air struggle alone.

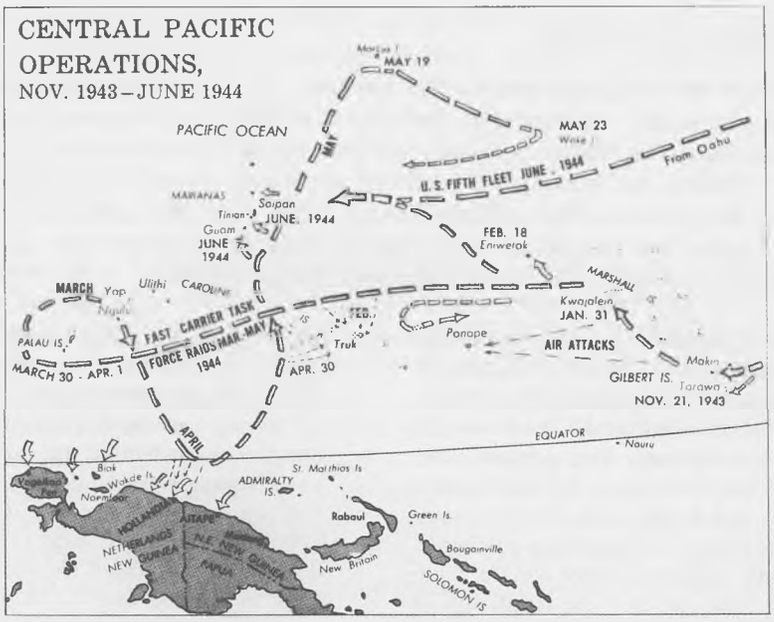
The Central Pacific

1943, January–October. American Naval Build-up. Men, ships, and planes in amazing numbers began to assemble in Hawaii, the Fijis, and the New Hebrides as Nimitz prepared for his coming westward offensive across the wide Pacific. By October he had the Fifth Fleet (Vice Admiral **Raymond A. Spruance**), consisting of 7 battleships, 7 heavy and 3 light cruisers, 8 carriers, and 34 destroyers—the largest fleet yet to be put in action by the U.S. He had the Fifth Amphibious Force (Turner), carrying more than 100,000 troops, and the V Amphibious Corps, commanded by Major General **Holland M. ("Howling Mad") Smith,** U.S.M.C. In addition to naval air, Nimitz had the Seventh Army Air Force (Major General **Willis A. Hale**) operating from the Ellice Islands and (when its chore in the Solomons was completed; see p. 1269) the naval and Marine elements which had comprised Halsey's Third Fleet. Nimitz' initial target was the Gilbert Island group, whose seizure would provide advance air bases for the next step—capture of the Marshall Islands. In the Gilberts, Japanese defenses centered on Makin and Tarawa atolls—island clusters each ringed by a coral-reef barrier.

1943, November 13–20. Preassault Bombardment of the Gilberts. Tarawa and Makin were thoroughly strafed by Air Force bombers (November 13–17) and then subjected to heavy naval gunfire before the landing forces were committed.

1943, November 20–23. Makin. The 165th Infantry of the 27th Division, heavily reinforced, found little difficulty in crushing the island's 250 combat troops and several hundred workers, but the advance was too slow to suit General "Howling Mad" Smith. The delay necessitated subjecting the naval forces to counterattack by submarines rushed from Truk. The escort carrier *Liscome Bay* went down, with loss of 640 officers and men, though casualties suffered in the assault were but 66 killed and 152 wounded. Japanese casualties totaled some 500 killed; about 100 prisoners, nearly all of them Korean laborers, were taken.

1943, November 20–24. Tarawa. Betio Island, citadel of the atoll, in area only 300 acres, flat and sandy, had been honeycombed with underground shelters and some 400 concrete pillboxes, bunkers, and strong points. Defending artillery included 8-in. guns brought from Singapore. The island was ringed by a coral reef, its openings studded with submarine mines, and the beaches laced with barbed wire. Insufficient reconnaissance and faulty maps had not disclosed that the inner coral reef of Betio itself was too shallow for landing craft. Despite the heavy preliminary bombing and naval gunfire, 4,700 veteran combat troops under Rear Admiral **Keiji Shibasaki** emerged from underground shelters to man their defenses as the initial assault waves of the 2nd



Marine Division approached. While some amphibious tractors reached the beach, most of the assault craft grounded on the inner reef and the assailants were forced to wade several hundreds of yards through crisscross fire, suffering shocking losses. Supporting naval fire ceased shortly after the initial wave hit the beach, lest it hit the Marines, who were thus left clinging to a few yards of terrain swept by artillery, machine-gun, and small-arms fire. Of 5,000 men put ashore by nightfall, some 1,500 were dead or wounded. That night tanks, guns, and ammunition got ashore. Next day the divisional reserve landed, losing 344 officers and men in the withering cross fire. Inch-by-inch frontal assaults—there could be no maneuver in that restricted area—supported now by air and by naval gunfire directed by observers ashore, gradually forced the defenders back to the eastern end of the island. Most of the surviving defenders lost their lives in a suicidal counterattack (night of November 22–23) and the last pocket of resistance was cleaned out next day.

Approximately 100 prisoners, only 17 of them combat soldiers, were taken. The remainder of the Japanese garrison were dead. Marine losses were 985 killed and 2,193 wounded. During these operations, Admiral Koga held his crippled fleet at Truk (see p. 1269), fearing the U.S. carrier force, but his land-based planes from Kwajalein twice unsuccessfully attacked warships of the Amphibious Force on Thanksgiving night (November 25).

COMMENT. *Tarawa, in ratio between casualties and troops engaged, ranks among the costliest battles in American military history. Its lessons brought about many improvements in amphibious assault techniques, correcting the manifest mistakes committed there: insufficient reconnaissance and insufficient artillery and air preparation fire, particularly the lack of the high-angle plunging fire necessary to obliterate well-constructed fortifications. Strategically, this epic of Marine Corps gallantry put Nimitz in position to combine land-based air and sea power in assaulting the Marshalls and eliminating or neutralizing Japan's great naval base at Truk.*

The North Pacific Area, 1943

The year opened with Japanese occupation forces on the 2 fortified western-most Aleutian Islands—Attu and Kiska—supported by land-based aviation from Paramushiro, off the southern tip of Kamchatka. U.S. efforts to dislodge the invaders stemmed from the naval and military base at Dutch Harbor on Umnak in the central Aleutians. Actually, operations in this fog-bound, stormy area had no effect on the war with Japan, other than irritating the U.S. But the North Pacific Theater was the scene of several sporadic clashes while the war was being decided in the momentous struggles of the Southwest and Central Pacific.

1943, March 26. Battle of the Komandorski Islands. Cruising in the mouth of the Bering Sea, Rear Admiral **Charles H. McMorris** with 2 elderly cruisers—1 light and 1 heavy—and 4 destroyers, met Japanese Vice Admiral Hosogaya's Northern Area Force of 2 heavy and 2 light cruisers and 4 destroyers, escorting reinforcements for Attu. In a long-range gun battle, U.S.S. *Salt Lake City* was crippled and the Japanese cruiser *Nachi* severely damaged. But as Hosogaya closed to smother the Americans, 3 of McMorris' destroyers charged in with a desperate torpedo attack. Hosogaya sheered away and then, fearing attack by American air from Dutch Harbor, turned and made for Paramushiro. (His timidity caused his relief from command.) Henceforth the Japanese relied upon submarines alone to resupply their Aleutian bases.

1943, May 11–29. Attu. Admiral Kinkaid's amphibious task force under Rear Admiral **Francis W. Rockwell** put the U.S. 7th Infantry Division ashore in heavy fog. For 18 days the Americans battled the garrison out of the usual Japanese prairie-dog complex of bunkers and underground shelters. Only 29 of the 2,500-man garrison were captured; the rest died fighting or killed themselves. U.S. losses were 561 killed and 1,136 wounded of the 12,000 men engaged, a costly price for the taking of an island written off by the Japanese high command.

1943, August 15. Kiska. A Canadian-American amphibious landing on Kiska (August 15) found it deserted; its 4,500-man garrison had been skillfully evacuated (July 29) in fog and darkness.

The War Against Japan, 1944

Strategy and Policy. In the Pacific, as across the Atlantic, the Axis sun was beginning to set as 1944 opened. U.S. resources—in men and machines—were increasing in strength and infinite technological variety. Japan was beginning to feel the pinch of U.S. submarine operations against her merchant marine, but had no antidote. Nearly 300 of her merchantmen were sunk in 1943 for a total of more than 1,300,000 tons, some 700,000 tons more than Nippon's replacement capability during the same period. U.S. submarine activities would be stepped up in the coming year to drain Japanese tanker strength, still greater than American. But, unwilling to admit overextension, Japan was still a formidable enemy. Her forces continued to strike with much tactical skill and tremendous—though sometimes misdirected—energy on all fronts.

Land and Air Operations in Asia. Both sides girded for offensive moves. Japanese objectives were to conquer all southeast China, eradicating the galling probes of Chennault's Fourteenth Air Force, and to invade India from Burma. The Allied objective was to remove the threat to India by driving the invaders out of Burma and, by opening the land routes of supply to China,

to keep that nation in the war. General Stilwell, whose differences with Chiang Kai-shek were rapidly increasing in bitterness, hoped to be able to maintain a successful defense in China while mounting a vigorous offensive in Burma in joint operation with British General Slim's Fourteenth Army.

Burma

Allied Situation and Plans. In October 1943, the Southeast Asia Command, with Vice Admiral Lord **Louis Mountbatten** as Supreme Allied Commander, became operational, its headquarters at New Delhi (later Kandy, in Ceylon). Mountbatten assumed responsibility for all Allied operations in Burma. General Stilwell was appointed as deputy to Mountbatten, but since he still retained his other duties, spent little time at Kandy. All Allied ground forces operating against Burma from India were grouped under General Slim, including Stilwell's Northern Combat Area Command (2 Chinese divisions), actively engaged in combat in the Hukawng Valley of northern Burma. (Thus Stilwell, who was over Slim as deputy SACSEA, was under him as CG of NCAC, and at the same time was in a purely American chain of command as CG of the China-Burma-India Theater, and also was Chief of Staff to Chiang in the China Theater.)

Mountbatten and Slim felt that British forces in India would not be ready for a major invasion of Burma until the dry season of 1944–1945. They agreed, however, to assist Stilwell's NCAC by minor activities along the entire India-Burma border, as well as by 2 limited thrusts into Burma itself; one of these to be in Arakan, the other an augmented Chindit long-range-penetration effort in north-central Burma under General Wingate. (This raid had been specifically approved by Churchill and the CCS at Quebec.) Stilwell, with 3 (to be increased to 5) Chinese divisions, plus a small American combat unit, hoped to take the major north Burma city of Myitkyina, with its airfields, before the beginning of the 1944 monsoon.

Japanese Situation and Plans. The Japanese also had reorganized their forces in Burma. The new commander of the Burma Area Army was Lieutenant General **Shozo Kawabe,** who was under the overall command of Field Marshal **Count Terauchi,** with headquarters in Saigon, responsible for military operations in the entire Southern Resources Area. Kawabe had 6 divisions, 2 in southwest Burma, under his direct supervision; the other 4, to the north, were under Lieutenant General **Renya Mutaguchi**'s Fifteenth Army.

Kawabe had directed Mutaguchi to prepare for an offensive across the mountains into eastern India with 3 of his divisions, which, with attached units, totaled nearly 100,000 veteran combat troops. The objective was twofold: first, to seize the Imphal-Kohima plain of Manipur, the logical assembly area and base for any Allied invasion of central Burma from India; second, to cut the railroad line into Assam, which passed through Manipur, and which carried almost all of the supplies ferried to China over the Hump, as well as the supplies for Stilwell's NCAC divisions in north Burma.

The Second Arakan Campaign

1943, December–1944, January. Allied Advance into Arakan. Three divisions of the British XV Corps, advancing toward Akyab, were soon halted by the Japanese 55th Division, which had fortified a mountain spur extending westward to the sea near Maungdaw, blocking the only possible overland route to Akyab. For nearly 2 months the British vainly

hammered at this defensive position. Kawabe sent the 54th Division into Arakan as reinforcement.

1944, February 4–12. Japanese Counterattack. Using the same tactics which had defeated the British in the same area a year earlier, the Japanese 55th Division counterattacked, while elements of the 54th circled through the jungles to the east, crossing the mountains behind the British flank and cutting the lines of communication of both British front-line divisions, isolating them from each other and from many of their smaller formations. General Slim, refusing to permit any withdrawal, rushed reinforcements and initiated an emergency air supply to the beleaguered units.

1944, February 13–25. British Counterattack. The Japanese encircling forces now found themselves encircled by determined British and Indian units. The 2 front-line British divisions reestablished contact (February 24) and increased pressure on the trapped Japanese, most of whom were wiped out.

1944, March–April. Cracking the Maungdaw Position. In extremely bitter fighting, the British XV Corps fought its way gradually through the Maungdaw position. Having broken through, the corps was about to continue its advance on Akyab, when it was forced to halt and to send reinforcements to the Imphal front (see p. 1277).

1944, May–December. Monsoon Stalemate. No further activities of importance took place on this front until late in the year at the beginning of the 1944–1945 dry season (see p. 1294).

North Burma

HUKAWNG VALLEY OPERATIONS, JANUARY–APRIL

1944, January–February. Stalemate in the Hukawng Valley. Effective resistance by the Japanese 18th Division, commanded by Major General **Shinichi Tanaka,** brought the advances of the Chinese 38th and 22nd divisions to a virtual standstill. Stilwell's return (late February) brought some increased Chinese activity and a renewal of the advance against determined resistance. At this time there appeared a new American provisional infantry regiment, known to history as "Merrill's Marauder," from the name of its commander, Brigadier General **Frank D. Merrill.**

1944, March 3–7. Battle of Maingkwan-Walawbum. A Chinese frontal attack, combined with an envelopment by Merrill's Marauders, smashed the center of the Japanese 18th Division. Despite heavy losses, Tanaka skillfully extricated his division from near encirclement. The Allies, pressing close behind, were stopped at a new Japanese defensive position established along a jungle ridge separating the Hukawng and Mogaung valleys.

1944, March 28–April 1. Battle of Shaduzup. One battalion of Merrill's regiment and a Chinese regimental task force circled deep behind the Japanese lines to take up a blocking position behind the 18th Division at Shaduzup. Two of Tanaka's regiments were trapped, but fought their way out through obscure jungle trails after suffering severe losses and abandoning much equipment and ammunition. Tanaka, nevertheless, counterattacked and briefly isolated another of Merrill's battalions in the mountains southwest of Shaduzup (March 29–April 8).

THE SECOND CHINDIT EXPEDITION

1944, January–March. Preparations. For his renewed long-range penetration effort, Wingate was given 6 infantry brigades (only 5 actually participated) organized as the 3rd Indian Division, but more commonly called "Special Forces," or "Chindits" (see p. 1262). A total of 20 British, Indian, and West African infantry batallions, each divided into 2 "columns," were to be flown deep into north-central Burma, while the sixth was to march across the mountains, past Stilwell's left flank. Operating separately, but in accordance with a coordinated plan, the columns and brigades were to cut the Mandalay-Myitkyina railroad, and generally to disrupt the rear areas of Japanese forces facing Stilwell's NCAC and Slim's Four-

teenth Army. The Chindits were to receive combat air support and air logistical support from an American air group commanded by Colonel **Philip C. Cochrane.**

1944, March 5–11. The Chindits Return to Burma. Transported initially in gliders, then in transport planes as a jungle air strip was hastily constructed, 3 brigades of Chindits were flown to preselected, isolated jungle spots dubbed "Broadway" and "Chowringhee." While a few columns spread out over Japanese rear areas to create confusion and to destroy supplies, the main body moved to Mawlu, where a strong defensive position was established, blocking the railroad line (March 16).

1944, March 17–May 6. White City. The blocking position at Mawlu was named "White City" (after a London amusement park) because it was soon strewn with supply parachutes dropped from Cochrane's supporting transport planes. The Japanese did not interrupt their major offensive into India because of this threat to their rear, but a number of determined local attacks were made; all were repulsed. Meanwhile, other Chindit columns continued to harass Japanese rear areas.

1944, March 25. Death of Wingate. The Chindit commander was killed in an airplane crash against a jungle mountain. He was replaced by Major General **W. D. A. Lentaigne.**

1944, May 6–25. Blackpool. As newly arrived Japanese reinforcements began to concentrate against White City, Lentaigne decided to abandon the base. Since he had been instructed to join Stilwell's command, a new base, "Blackpool," was established near Hopin, about midway on the rail line between Mawlu and Mogaung. Blackpool was soon attacked by strong Japanese forces, and a violent battle raged. The hard-pressed Chindits, close to exhaustion and having suffered heavy casualties, withdrew again, this time to the relative safety of the mountains farther west.

1944, June–July. Operations with NCAC. The exhausted and battered Chindits gathered in the vicinity of Indawgyi Lake, where British flying boats landed and began to ferry sick and wounded back to India. Meanwhile, the 2 brigades that were least hard hit continued to operate with Stilwell's forces. One of these helped capture Mogaung (see p. 1276), and the other for a while protected the NCAC flank (see p. 1276). Relations between Lentaigne and Stilwell were not good; Stilwell thought the Chindits could have fought more vigorously; Lentaigne felt Stilwell was asking too much in the light of the ordeals they had suffered; both were probably right.

COMMENT. *This was a gallant but largely wasted effort. Although it had somewhat more success than Wingate's first expedition, the same results could have been obtained by smaller commando or guerrilla forces, assisted by air bombardment, without ruining the fighting effectiveness of 5 fine British brigades.*

MYITKYINA-MOGAUNG OPERATIONS, APRIL–AUGUST

1944, April 28–May 17. Advance on Myitkyina. After a brief pause because of the Japanese threat to his lines of communications through Assam (see p. 1277), Stilwell decided that the British would repulse the Japanese offensive, and continued his efforts to reach Myitkyina before the beginning of the monsoon rains. Merrill's Marauders (now commanded by Colonel **C. N. Hunter,** due to Merrill's protracted illness), reduced by casualties and disease to 1,400 men, were sent with 2 Chinese regiments in a secret march over the high, extremely rugged ridge between the upper Mogaung and Irrawaddy valleys to take Myitkyina.

1944, May 17–18. Assault on Myitkyina. The American-Chinese attack quickly gained control of Myitkyina's 1 operational airfield, and supplies and reinforcements were rushed there by air while it was still under direct Japanese small-arms fire. Efforts of the exhausted and disease-ridden troops to seize the city were repulsed, however, and the Japanese, with reinforcements arriving from the east bank of the Irrawaddy, also repulsed the fresh air-transported Chinese reinforcements.

1944, May–June. Advance down the Mogaung Valley. Meanwhile, Stilwell's veteran

Chinese 22nd and 38th Divisions resumed a slow advance down the Mogaung Valley against Tanaka's continued skillful resistance. The 22nd Division (with reinforcements from China) captured **Kamaing** in an old-fashioned bayonet assault (June 16); the 38th, with assistance from a Chindit column (see p. 1275), soon afterward seized **Mogaung** (June 26). Both divisions, which (thanks to Stilwell's inspiration) had fought well and vigorously despite heavy casualties, were now given a rest as monsoon rains made further operations difficult.

1944, May 18–August 3. Siege of Myitkyina. Despite the monsoon, the Allies continued to press against the city, which was never completely invested, the Japanese retaining a line of communications across the Irrawaddy. Coordination between Chinese and Americans was poor; the efforts of commanders, staffs, and troops were frequently inept. The Japanese, forced to yield ground inch by inch, exacted a heavy price in Allied casualties. Finally, satisfied that they had imposed sufficient delay on the frustrated Allies, 700 semistarving Japanese survivors crossed the river and made their way south through the jungles to rejoin their main force, just as a final Allied assault, without opposition, swept over the city. Japanese losses were nearly 3,000 dead; the Allies had more than 5,000 casualties.

COMMENT. *The military performance of the Japanese, facing great odds, under constant air and artillery bombardment, was magnificent. But, despite relatively poor performance by his subordinates and troops, Stilwell had successfully completed a campaign which the British, and many Americans, had deemed impossible.*

1944, July–August. The "Railroad Corridor" Campaign. The 3rd West African Brigade of Chindits, now under Stilwell's command to protect his right flank against possible counterattack up the Mandalay-Mogaung railway line, was ordered to advance down the railroad from Mogaung to seize Pinbaw. The Africans were immediately stopped by Japanese defensive positions on the railroad south of Mogaung. The British 36th Division, under Major General **Francis W. Festing,** was transferred (July 7) to Stilwell's command to replace the now exhausted Chindits. Airlifted to Myitkyina, thence by foot to Mogaung, Festing's troops fought down the long, sheltered corridor against determined Japanese resistance, during the height of the monsoon season, to take **Pinbaw,** their objective (August 28). Aggressive Festing, obtaining Stilwell's permission to patrol southward, then struck 50 miles farther down the corridor, driving the Japanese out of a series of hastily prepared delaying positions.

COMMENT. *This 100-mile-long campaign was the first instance in modern military history of a large-scale offensive in Southeast Asia during the rain and mud of the monsoon season.*

STILWELL'S FINAL OFFENSIVE, SEPTEMBER–DECEMBER

1944, September–October. Pause and Preparation. Stilwell now had 5 Chinese divisions (3 good, 2 mediocre), the excellent British 36th Division, and the newly organized U.S. "Mars" Brigade (2 U.S. and 1 Chinese regiments and 2 light artillery battalions). He was opposed by the Japanese Thirty-third Army (Lieutenant General **Masaki Honda**) of 3 depleted divisions. As soon as the rains let up, and before the ground had time to fully dry, Stilwell planned a surprise offensive, featured by a sweeping envelopment in which 3 of his Chinese divisions and the American brigade would encircle the entire Japanese Thirty-third Army, which would then be trapped between his army in Burma and the Y-Force in Yunnan (see p. 1281).

1944, October 15. The Offensive Begins. With the 38th and the 30th divisions advancing from Myitkyina toward Bhamo against the main elements of the Thirty-third Army, and the 36th Division continuing down the Railroad Corridor to protect the NCAC right flank and rear, Stilwell's mass advanced southward from the Mogaung area to cross the Irrawaddy River near Shwegu, thence southeastward through the jungle with the objective of reaching the Burma Road near Lashio.

1944, October 15–December 31. Railroad Corridor (continued). The British 36th Divi-

sion continued its advance, moving slowly but steadily down the railroad, despite intensifying Japanese resistance. By the end of the year, the division had seized the towns of Indaw and Katha, and halted temporarily because of developments farther east.

1944, October 18. Relief of General Stilwell. **(See p. 1281.)** The commander of the newly established India-Burma Theater was Lieutenant General **Dan I. Sultan.**

1944, November 6. Crossing the Irrawaddy. The Chinese 22nd Division began the crossing of the Irrawaddy as spearhead of the enveloping hammer blow.

1944, November 14–December 15. Siege of Bhamo. The Chinese 38th Division was held up for a month by the stubborn and determined defense of Bhamo. When further resistance was impossible, 800 surviving Japanese fought their way out at night to rejoin the 56th Division in the mountains between Bhamo and Namkham. The 30th and 38th Divisions pushed slowly after them.

1944, November 30–December 31. Change of Plans in North Burma. Due to disasters caused by a Japanese offensive in China (see p. 1281), Chiang Kai-shek decided to withdraw 2 divisions from Burma to help stop the dangerous Japanese drives in south China. The 22nd and 14th Divisions were flown out of Burma to Kunming in American planes from hastily constructed front-line airfields in the jungle region southeast of the Irrawaddy bend (December 5–10). Sultan was thereupon forced to modify Stilwell's plan of encircling the Japanese Thirty-third Army. The reduced mission was simply to open and secure the road that stretched east from Bhamo through Namkham toward the Burma Road.

Central Burma

The Japanese Invasion of India, March–July

1944, March 6. Crossing the Chindwin. Mutaguchi's Fifteenth Army began its projected offensive toward India by crossing the Chindwin River on a broad front. One division headed for Kohima, 2 for Imphal.

1944, March 7–April 5. The Advance to Imphal and Kohima. Although the British had been expecting the offensive, they had underestimated the size of the Fifteenth Army; they were amazed by the speed and power of its advance. British outposts holding the Chin Hills around Tiddim and Fort White were cut off by the Japanese 33rd Division, but succeeded in breaking their way through Japanese road blocks to reach Imphal, just before the arrival outside that city of the Japanese 15th Division, which unexpectedly was approaching over rugged mountain trails from the east (April 5). The Japanese 31st Division had begun to invest Kohima the previous day. The British IV Corps, of 3 divisions, was now almost completely isolated, the bulk of the corps in and around Imphal, with a small garrison holding Kohima.

1944, April 5–20. The Sieges of Imphal and Kohima. While hastily assembled transport planes began an airlift to maintain some 50,000 men in the IV Corps and the 40,000 civilian inhabitants of Imphal and Kohima, General Slim assembled his XXXIII Corps on the railroad at Dimapur. Pushing back Japanese patrols, this corps began a drive to relieve the dangerously pressed garrison of Kohima. At the same time, Slim also began to fly in reinforcements to the IV Corps at Imphal. Bitter fighting flared continuously around both perimeters, and several times Kohima was close to collapse, the margin being air support from American and British fighter planes and medium bombers, which harassed the Japanese mercilessly. The situation became less precarious, however, when the XXXIII Corps broke through to relieve Kohima (April 20).

1944, April 20–June 22. The Siege of Imphal (continued). Further progress by the XXXIII Corps toward Imphal was painfully slow as the Japanese dug in and held with typical tenacity. Slim flew additional units in to Imphal from Arakan until the IV Corps strength rose to more than 100,000 men. Amazingly, the Japanese held back violent assaults against their lines by both British corps. They had failed, however, to

capture the supplies on which they had been counting. The beginning of the monsoon, too, made their situation still more difficult. Because of hunger and disease, their fighting strength finally began to crumble, and the IV and XXXIII Corps were able to hack their way through the last remaining roadblocks (June 22) after a siege of 88 days.

1944, July–September. Collapse of the Fifteenth Army. The Japanese had not foreseen the possibility that the British would refuse to retreat and abandon their supplies. Now that their logistical shoestring was broken, and with the monsoons making large-scale supply operations impossible in the mountain jungles, they had no choice but to retreat. Slowly and stubbornly, they fell back to the Chindwin Valley, harassed from the air and by pursuing British troops; amazingly, they never lost cohesion or combat effectiveness. The army had been virtually ruined, however, by a combination of battle casualties, malaria, and starvation. They lost 65,000 dead, less than half of whom were actual battle casualties.

BRITISH ADVANCE INTO CENTRAL BURMA, SEPTEMBER–DECEMBER

Allied Plans and Preparations. Pursuit of the Japanese Fifteenth Army had brought Slim's Fourteenth Army again to the edge of the Chindwin Valley. He now prepared for a broad-front crossing of the Chindwin, to take place in November. Over Slim was Lieutenant General Sir Oliver Leese, commanding the newly established headquarters of Allied Land Forces, Southeast Asia (ALFSEA). Under Leese, in addition to Slim, were Stilwell (later Sultan) and his NCAC, and the British XV Corps in Arakan.

Japanese Plans and Preparations. Because of the disaster to the Fifteenth Army, General **Hoyotaro Kimura** had replaced Kawabe in command of the Burma Area Army. He received reinforcements and he devoted the summer to reorganization, and in particular to the rehabilitation of the Fifteenth Army (now under Lieutenant General **Shihachi Katamura**) and the battered 18th Division. By fall his forces of 250,000 men were reorganized into 3 armies: the Thirty-third (3 divisions), holding northeastern Burma; the Twenty-eighth (3 divisions, under Lieutenant General **Seizo Sakurai**), responsible for the coast and Arakan; the Fifteenth (4 divisions), holding the west along the Chindwin. Kimura's strategy was to permit the Allies to reach central Burma, where their logistical difficulties would become increasingly acute, while those of the Japanese would be simplified in the proximity of their bases. Kimura was confident that his 10 divisions could smash the Allies in such circumstances. Accordingly, his orders were to harass and delay the Allied advance, but to avoid a finish fight until the British had been lured across the Irrawaddy near Mandalay.

1944, November 19–December 3. The British Cross the Chindwin. The IV Corps began the crossing at Sittaung; the XXXIII Corps followed soon afterward at Kalewa and Mawlaik. The Japanese fought delaying actions, but in accordance with plan did not attempt a firm defense.

1944, December 14. Linking of NCAC and Fourteenth Army. Patrols of the 19th Indian Division met those of Festing's 36th Division near Indaw. By the end of the year, the Fourteenth Army was approaching the Irrawaddy on a broad front; the stage was set for a climactic struggle long foreseen by both Slim and Kimura.

AIR OPERATIONS OVER BURMA, 1943–1944

AIR COMBAT

1943, January–March. Japanese Raids into India. With unchallenged air superiority over

Burma, the Japanese were able to continue long-range bombardment attacks against Calcutta and to undertake a number of raids against the Hump air bases in Assam, in northeastern India. These raids were not very effective and did not do much damage, but they harassed the Allies considerably.

1943, March–June. Arrival of Allied Air Reinforcements. As British and American combat air strength built up in India, the Japanese were forced to abandon their raids across the mountains. The Allies then began to carry the war into Burma, and soon gained air superiority over much of the country.

1943, June–October. Monsoon Lull. Air operations were greatly curtailed by the rainy weather. The Japanese took advantage of the lull to repair damage caused by the Allied raids, to improve their antiaircraft defenses, and to build up their overall air strength in Burma.

1943, November–1944, May. Struggle for Air Superiority. With the advent of good weather, the Japanese were prepared to challenge Allied air superiority. They began both night and day raids against Calcutta and against the Hump air bases, while their fighters vigorously struck back against Allied air intrusions into Burma. Severe losses were suffered on the ground and in the air by both sides. Slowly, however, the greater numbers and greater skill of the Allied air forces began to assert themselves. By mid-1944, General **George E. Stratemeyer**'s Eastern Air Command completely dominated the skies over Burma; this superiority was never to be relinquished.

LOGISTICAL AIR SUPPORT

General Kimura's strategy for defending Burma in 1944 failed to appreciate Allied air capabilities. The Japanese invasion of India had failed largely because they could not keep up long supply lines through the jungle under the pressure of constant air attack. But the Allies did not depend upon such supply lines to support their troops, or to keep up the advance in the jungle.

Hundreds of Allied transport planes brought food, ammunition, and all manner of supplies directly to the front-line troops. If there were no nearby airfields where they could land, the airmen dropped these supplies into rice-paddy fields or jungle clearings. Anything that might break was dropped by parachute; everything else was free-dropped.

Thus the Allies' only supply line came through the air, which they controlled completely. And, having driven Japanese combat planes from the skies, the Allies had no worries about air strikes against their bases in India.

COMBAT AIR SUPPORT

The difficulties of surface transportation in jungle areas meant that ground troops had less artillery support than normal, while the potentialities for defense in the jungle increased their need for it. The Chindits, in particular, needed such support, for they had no artillery. This deficiency was made up, at least in part, by the extensive direct support which British and American fighter-bombers were able to provide, since they had no need to engage the nonexistent Japanese air force.

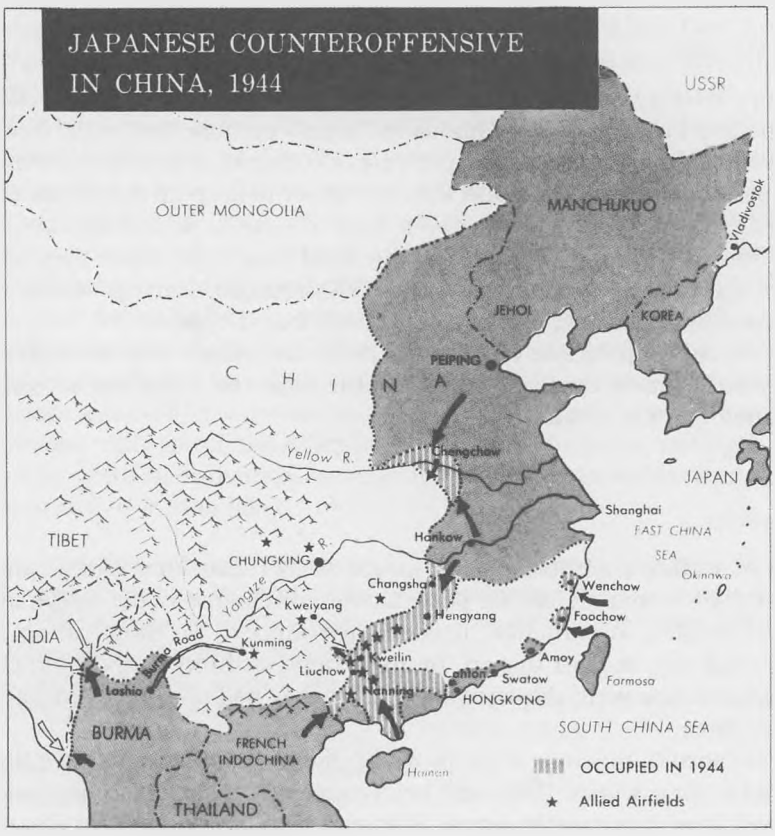
Most of the supporting missions were flown by fighter-bombers that dive-bombed strong Japanese positions, then strafed them just before ground attacks. In some instances, where Japanese defenses were particularly strong, light and medium bombers were used to support ground attacks.

China

1944–1945. Japanese-Chinese Communist De Facto Truce. The Japanese ended their punitive raids against the Communists. For the last 2 years of the war there was practically no activity on Chinese Communist fronts. Whether this truce was tacit or negotiated is not known. Both sides benefited: The Communists consolidated their control of northwest China. The Japanese diverted large forces for operations in the south.

1944, January–May. Japanese Plans and Preparations. The punishment they were receiving from Chennault's Fourteenth Air Force led the Japanese to decide to make an all-out effort to capture the American airfields by ground offensives. During the early months of the year, General **Yasuji Okamura**'s China Expeditionary Army, 820,000 strong, undertook preliminary operations to improve its railroad supply lines from northeast China.

1944, January–May. Allied Plans and Preparations. Chiang Kai-shek reconsidered his earlier veto on an advance against northeast Burma from Yunnan in the light of the successes being gained in northwest Burma by Stilwell's Chinese-American forces. He approved an offensive down the Burma Road by a small army group of 2 armies (called the "Y-Force"), consisting of 72,000 men commanded by Marshal **Wei Li-huang.** Because of shortages of equipment and weapons, this force was probably not much more powerful than the Japanese 56th Division, about 15,000 men, which held the portion of Yunnan west of the



Salween River, its major elements holding the walled cities of Tenchung and Lun-ling (the latter on the Burma Road itself).

1944, May 7–November 30. Japanese East China Offensive. Under Okamura's direct supervision, the Japanese Eleventh Army, 250,000 strong, initiated a south-westward drive from Hankow on Changsha. The Japanese Twenty-third Army, 50,000 strong, that same day thrust west from the Canton area. Chinese resistance was spotty. Ch'ang-sha, abandoned, was occupied (June 19). First stiff Chinese opposition was at **Hengyang,** which fell only after an 11-day siege (July 28–August 9). Chinese resistance began to collapse. Methodically, despite the fierce aerial opposition of Chennault's flyers, 7 of the U.S. Fourteenth Air Force's 12 airfields were captured, and the Japanese movement then turned westward (November 15) to threaten Kunming and Chungking.

1944, May 11–September 30. Operations in Yunnan. The Chinese Y-Force advanced across the Salween in 2 major columns, driving back Japanese outposts. The southern column surrounded **Lun-ling** less than a month after crossing the Salween. A Japanese counterattack drove this column back (June 16). Rallying, the Chinese finally halted the smaller pursuing force and slowly reestablished a partial blockade of the city. The northern column was more aggressive. Closely investing **Tenchung** (early July), it penetrated the city walls through a breach made by supporting fighter-bombers of the American Fourteenth Air Force. After a bitter house-to-house battle, the Chinese annihilated the defenders of Ten-chung (September 15). The Japanese thereupon mounted another counterattack at Lun-ling, driving the Y-Force's southern column almost back to the Salween before events in Burma forced them to abandon their pursuit.

1944, October 18. Relief of Stilwell. As Chinese resistance crumbled in the face of the Japanese East China drives, Stilwell vainly recommended to Chiang Kai-shek various measures to reconstitute an effective defense. The American government became alarmed lest China collapse entirely, and President Roosevelt suggested that Chiang grant full command authority over all Chinese forces to Stilwell (October 17). Chiang flatly refused, and in turn demanded the recall of Stilwell. Reluctantly, Roosevelt ordered Stilwell back to the U.S. The China-Burma-India Theater was dissolved. Major General **Albert C. Wedemeyer** replaced Stilwell as commander of a new China Theater and as chief of staff to Chiang.

1944, December. Halting the Japanese Drives. Wedemeyer's tact succeeded where Stilwell's bluntness had failed; he persuaded Chiang to acquiesce in the transfer of only 2 veteran Chinese divisions from the Burma front (see p. 1277); Chiang had demanded the return of all 5. Airlifted, these 2 divisions became the backbone of a revitalized defense. The Japanese advance was blunted by Wedemeyer's reorganized and reinforced Chinese troops, supported by Chennault's air force. Their counterattack east of Kweiyang (December 10) stabilized the situation.

COMMENT. *The Japanese ground offensive disproved the fallacy—vainly disputed by Stilwell when Chennault obtained approval for a Hump-supported air build-up at the cost of Chinese ground troops (see p. 1264)—that air power, unsupported by ground power, could stop Japan in China. The error was costly, since to correct it necessitated abandonment of a full-scale offensive in Burma (see p. 1277) and—by elimination of Chennault's bases—for a time deprived both Nimitz and MacArthur of expected assistance in their respective offensives in the Pacific.*

Land, Naval, and Air Operations in the South and Southwest Pacific Areas, January–August

At the outset of the year, the objective of the combined forces of MacArthur's Southwest Pacific Area and Halsey's Third Fleet was still to isolate, and eventually to assault, Rabaul.

South Pacific Area, January–June

1944, January–May. Consolidation in the Solomons. Halsey, still under MacArthur's operational command, was still under Nimitz administratively. In addition to isolating and neutralizing enemy bases in the overall campaign against Rabaul (see below), Halsey's forces were engaged in hard fighting to contain the Japanese Seventeenth Army in the Solomons, and particularly on Bougainville, where the bulk of that army attempted repeated, uncoordinated assaults against the small Allied perimeter at Empress Augusta Bay. By May, however, when starvation and despair had worked sufficiently on the isolated Japanese forces, the threat declined.

1944, February 15. Green Island. New Zealand troops seized Green Island as a site for an air base to intensify the pounding of Rabaul.

1944, March 20. Emirau. The seizure of this island in the St. Mathias group completed the isolation of Rabaul.

1944, June. Return of the Third Fleet to Nimitz' Command. The isolation of Rabaul and the consolidation of the Solomons virtually ended further combat missions for the South Pacific Area. Halsey reverted to Nimitz' command.

Southwest Pacific Area

1944, January 2. Saidor. A regimental combat team of the U.S. 32nd Division landed north of Saidor, enveloping the Japanese garrison. The Australians, moving up from Finschhafen, made contact (March 23); the garrison evaporated into the interior. This provided Kenney's Fifth Air Force with a base to support operations on Cape Gloucester.

1944, February 29. The Admiralties. A reconnaissance in force by the U.S. 1st Cavalry Division, accompanied by MacArthur in person, speedily turned into a division-strength invasion of Los Negros Island (cleared March 23) and establishment of advance air bases. In this fighting U.S. casualties were 290 killed and 1,976 wounded. Some 3,000 Japanese were dead, 89 made prisoner.

1944, January–March. New Britain. Across Vitiaz Straits the beachheads of Cape Gloucester and Arawe expanded by mid-March as the 1st Marine and 40th Army divisions moved east along the coasts of the banana-shaped island. U.S. losses were 493 killed, 1,402 wounded; the Japanese left 4,600 dead and 329 prisoners. Later, Blamey's Australians would take over the containment of Rabaul on the land side.

THE HOLLANDIA CAMPAIGN

The Japanese high command decided to make an all-out effort to hold western New Guinea. The Second Area Army (Lieutenant General **Jo Imura**) had established a major supply and maintenance base at Hollandia, 500 miles west of Saidor and beyond reach of Kenney's fighter aircraft, whose range was about 350 miles. They began to construct airfields for future defensive and offensive air operations. By April, 3 of these were ready, located several miles inland, behind coastal mountains. Knowing that MacArthur had never made an attack beyond the range of fighter aircraft, they had few security troops at Hollandia. Most of Adachi's Eighteenth Army—65,000 strong—was concentrated between Madang and Wewak.

MacArthur, however, had decided to by-pass the Eighteenth Army and to strike at Hollandia itself. With the approval of the JCS, Nimitz agreed to send Admiral **Marc Mitscher**'s Fast Carrier Task Force to provide air support and air cover until land-based air could take over. Because of the danger of operating so near to Japanese air bases in New Guinea and the Carolines, however, Nimitz insisted that the carriers could stay in the coastal waters of New

Guinea for only 4 days. Thus it was essential that MacArthur obtain a secure base for land-based fighters, in range of Hollandia, before the carriers withdrew. Yet any earlier attempt to seize such a base would alert the Japanese to the danger to their key base. Accordingly, MacArthur decided to seize Aitape—125 miles east of Hollandia—by amphibious assault at the same time that the main 2-division landing was made at Hollandia. Aitape was west of the main concentration of the Eighteenth Army, yet it was within extreme range of American airfields at Saidor and thus could be covered by land-based aircraft while the carriers were assisting the main landings. Then, before the carriers withdrew, he planned to shift land-based air units to Aitape to keep adequate air support at Hollandia.

1944, March 30–April 19. Preliminary Air Bombardment. Kenney's long-range bombers struck the Hollandia fields repeatedly as part of an intensified air effort against Japanese coastal installations. Some 120 Japanese planes were shot down and 400 destroyed on the ground; Allied losses were insignificant.

1944, April 1–20. Australian Ground Pressure against Madang. Intensified ground activity against the Eighteenth Army was so successful that reinforcements were drawn from Hollandia, still further weakening the garrison of the air and naval base region.

1944, April 22. Landings at Hollandia and Aitape. The American 24th and 41st divisions landed on beaches 25 miles apart, east and west of Hollandia. At the same time, 2 reinforced American regiments were placed ashore at Aitape, under long-range land-based air support. The Seventh Fleet and Seventh Amphibious Force were responsible for both operations.

1944, April 22–24. Battle for Aitape. A bitter 2-day struggle took place at Aitape, while American engineers hastily prepared an airfield for operational use. American losses were 450 killed and 2,500 wounded; the Japanese lost about 9,000 dead. The area was secure and the air base operational within 2 days (April 24).

1944, April 22–27. Battle for Hollandia. With excellent carrier support, the American divisions converged inland against the Japanese airfields. Japanese resistance was light, due to the complete surprise achieved. When the carriers withdrew (April 26), land-based fighters from Aitape were available to provide support and cover. American losses were about 100 dead and 1,000 wounded; the Japanese lost more than 5,000 dead; about an equivalent number of survivors fled to the jungle.

COMMENT. *The Hollandia operation was one of the most brilliant of World War II. An entire Japanese army was encircled and its effectiveness completely destroyed. Yet because of excellent planning and skillful coordination of land, sea, and air forces, the actual combat actions were relatively small, and only insignificant Japanese forces were engaged and defeated.*

1944, May 17. Wakde. An amphibious assault quickly secured this island and its airfields. As at Hollandia, however, the soil proved to be unsuitable to support extensive operations by Kenney's long-range heavy bombers.

1944, May 27–June 29. Biak. This coral and limestone island, already used by the Japanese for an airfield, seemed the most likely spot for a heavy-bomber base in the northern New Guinea area. The amphibious landing of the 41st Division encountered unexpectedly determined resistance. In one of the most bitterly contested battles of the Pacific war, the Americans suffered more than 2,700 casualties, the Japanese nearly 10,000.

1944, June 28–August 5. Operations around Wewak and Aitape. In a series of hard-fought actions, General Blamey's Australians repulsed a Japanese Eighteenth Army offensive against Allied coastal bases of north-central New Guinea. The Japanese army, cut off from supply by land or sea, disintegrated into the jungles of the interior, where its disorganized elements rotted for the remainder of the war.

1944, July 2–7. Noemfoor. Capture of this island, west of Biak, provided additional Allied air strips.

1944, July 30. Sansapor. The unopposed occupation of this cape, on the northwestern tip of New Guinea's Vogelkop Peninsula, brought the campaign to a close. Japan's power in New Guinea had been completely destroyed.

The Central Pacific, January–August

1944, January 29–February 7. Kwajalein. While MacArthur was starting his New Guinea drive, the next target of Nimitz' trans-Pacific offensive was the Marshall group, with Kwajalein atoll its citadel. Admiral Spruance's Fifth Fleet had operational responsibility. As preliminary, Mitscher's Fast Carrier Task Force (Task Force 58: 6 heavy and 6 light carriers, escorted by fast battleships, cruisers, and destroyers) swept ahead in 4 groups to neutralize Japanese air in the Marshalls. Turner's Fifth Amphibious Force, carrying General H. M. Smith's V Amphibious Corps of 1 Army and 2 Marine divisions, carried out the operation. A 3-day preliminary naval and aerial bombardment saturated the atoll. Then (February 1) the 7th Infantry Division was landed on Kwajalein Island, southeastern flank of the lagoon, and the 4th Marine Division was put ashore on Roi and Namur islands, some 50 miles away on the northern rim. As usual, the Japanese garrisons (commanded by Rear Admiral **M. Akiyama**) put up a savage fight, but, thanks to the lessons learned at Tarawa, the defenders were overrun with relatively light losses (February 7). Of 41,000 U.S. troops put ashore, casualties were 372 dead and some 1,000 wounded. Both Japanese garrisons fought to the death, 7,870 of them being killed out of 8,000. Admiral Koga, down at Truk, with no carriers available, dared not risk his Combined Fleet to oppose the assault, but sent up some submarines, which were driven off with loss of 4 of their number. However, a surprise Japanese bomber raid from Saipan later strafed the Roi-Namur complex (February 12), inflicting some damage.

1944, February 17–18. Bombing of Truk. Mitscher's carrier force hit the Japanese naval base. Koga managed to save most of the Combined Fleet by a hurried dispersal, but the attack found 50 merchant-men in harbor and 365 aircraft huddled on airstrips. One Japanese hit was scored on U.S. carrier *Intrepid*. By noon, Mitscher's planes had sunk 200,000 tons of shipping and destroyed 275 Japanese planes. Spruance, combing the vicinity with a battleship, 4 heavy cruisers, and 4 destroyers, sank 1 light cruiser and a destroyer. While the damage to Japanese naval strength was not fatal, the attack proved the vulnerability of Truk. Its usefulness ended, no further attempt was made to occupy the once-formidable naval base, and it was left to wither on the vine. Koga's fleet withdrew to the Philippine Sea behind the Caroline-Marianas islands screen.

1944, February 17. Eniwetok. Turner's amphibious force put the 22nd Marines and army troops ashore on Engebi Island on the northern rim of this atoll without interference by Japanese planes. But Eniwetok Island itself, and Parry Island on the southern rim, were sturdily defended by Major General **Nishida**'s 1st Amphibious Brigade, a veteran combat unit 2,200 strong. Three U.S. battalions fought for and reduced the islands in succession, losing 339 men dead. The Japanese garrisons were annihilated (February 21) in close-in fighting in which Japanese land mines and U.S. flame throwers took heavy toll.

1944, April–May. Operation A-Go. Admiral Koga was killed in an airplane accident (April 1). His successor, Admiral **Soemu Toyoda,** a stronger character, bent all efforts to renew the original Japanese plan to wipe out the Pacific Fleet. Accordingly, he ordered (May 3) Vice Admiral **Jisaburo Ozawa,** commanding both the now somewhat rejuvenated carrier striking force and the First Mobile Fleet, to lure the American naval strength into the area Palaus-Yap-Woleai, where Japanese land-based aviation could assist in its destruction. Ozawa's fleet rendezvoused (May 16) off the southern tip of the Sulu Archipelago, where it was harassed by U.S. submarines, which also later warned Spruance of Ozawa's movement into the Philippine Sea (see p. 1285).

1944, June–August. The Marianas. Turner's V Amphibious Force—530-odd warships and

auxiliaries with over 127,000 troops of Smith's V Amphibious Corps aboard—arrived off Saipan (June 15), 1,000 miles from its rendezvous, Eniwetok. Ahead of it, Mitscher's Task Force 58 had softened up the island defenses by fighter and bombing sweeps that cost the Japanese an approximate 200 combat planes and a dozen or more cargo ships (June 11–12). Then Mitscher's battleships and destroyers pounded ground installations at long range. Commanding the Marianas defensive forces was Admiral Chuichi Nagumo (of Pearl Harbor fame), whose Central Pacific Fleet had no major ships; under him was the Thirty-first Army (**Hideyoshi Obata**).

1944, June 15–July 13. Saipan. Landings of 2nd and 4th Marine divisions on 8 beaches, abreast, met instant resistance from Lieutenant General **Yoshitsugo Saito**'s garrison (part of the Thirty-first Army) and Admiral Nagumo's 6,000 sailors ashore. By nightfall, a beachhead had been established, but continued heavy resistance necessitated commitment of the U.S. 27th Division to reinforce the assault. Departure of Mitscher's carriers (June 17) and—later—of all warships (for the Battle of the Philippine Sea; see below) deprived the attackers of much-needed naval air and gunfire support. The ground troops made small but continued progress at heavy cost over accidental terrain skillfully organized and defended by first-class troops. The island's airfield had fallen into U.S. hands by June 18, but not until July 9, following a last-ditch fanatical counter-attack by the 3,000 Japanese still surviving, did organized resistance end. American casualties on Saipan were 3,126 killed, 13,160 wounded, and 326 missing. Japanese losses were some 27,000 killed—including hundreds of Japanese civilians who committed suicide by jumping off the cliffs. Only about 2,000 were made prisoner. Both General Saito and Admiral Nagumo committed suicide.

COMMENT. *Slow progress of the 27th Division (committed June 19) particularly aroused "Howling Mad" Smith's ire. He relieved Major General Ralph C. Smith from command (June 24), precipitating an Army-Marine controversy to this day undecided, since it concerned radical difference between Marine and Army doctrine in assault tactics.*

Battle of the Philippine Sea, June 19–21, 1944

Ozawa's fleet had put to sea immediately upon receiving word of the assault on Saipan. Spruance, warned of the movement, gathered the Fifth Fleet under Admiral Mitscher's tactical command (June 18) 160 miles west of Tinian. Ozawa had 5 heavy and 4 light carriers, 5 battleships, 11 heavy and 2 light cruisers, and 28 destroyers. Spruance's fleet, augmented by Turner's Amphibious Force, numbered 7 heavy and 8 light carriers, 7 battleships, 8 heavy and 13 light cruisers, and 69 destroyers. U.S. planes numbered in all 956 to the Japanese 473; however, Ozawa would be giving battle within range of some 100 additional Japanese land-based planes based on Guam, Rota, and Yap. Also, Japanese planes had longer range than the Americans.

Ozawa's search planes picked up the Fifth Fleet by daybreak (June 19), 300 miles from his advance element of 4 light carriers and 500 miles from his main body. The opposing fleets were on southerly courses, Mitscher's carriers some 90 miles northwest of Guam and 110 miles southwest of Saipan in 4 carrier groups backed up by Spruance in the battle fleet. At about the same time, land-based planes from Marianas and Truk bases were repulsed with heavy loss. Following this, Ozawa attacked in 4 successive raids. Mitscher, discovering the first attacking group, loosed his interceptors and then sent the bombers aloft to keep his flight decks clear.

Misfortune struck Ozawa almost immediately. U.S. submarines following his movements

picked off *Taiho,* biggest and newest of Japan's carriers, and *Shokaku,* one of the 2 surviving vessels of Pearl Harbor, sinking them both. Mitscher's interceptors took terrible toll of all the raiders, and most of those who did get through were then brought down by antiaircraft fire. The "Great Marianas Turkey Shoot" cost Ozawa 346 planes and 2 big carriers; U.S. losses were but 30 planes and some slight damage to a battleship from the single Japanese bomb which found its target.

Meanwhile, Mitscher's bombers strafed Guam and Rota, neutralizing the airfields. The battle was over by dark (6:45 P.M.). Ozawa had hauled off. Mitscher pursued, but contact was not made again until late afternoon next day. Mitscher launched 216 planes, which sank another carrier and 2 oil tankers and seriously damaged several other vessels. Twenty U.S. planes were lost, and Ozawa lost 65 more of his surviving aircraft. Homeward bound in the dark, the U.S. planes fell into major difficulties despite the fact that Mitscher boldly lighted up his ships to guide his birds home. Some 80 planes out of gas either ditched or crash-landed. Mitscher moved west, his destroyers combing the area to pick up 50-odd flyers floating in the water, reducing U.S. personnel losses that day to 16 pilots and 33 crewmen. Ozawa's crippled fleet made its getaway. The Fifth Fleet returned to Saipan.

COMMENT. *Ozawa's desperate attack in the face of formidable odds cost Japanese naval air power mortal injury. Aside from the material damage suffered in ship and plane losses, the death of more than 460 trained combat pilots was irreplaceable.*

1944, July 21–August 10. Guam. Guam fell to the 3rd Marine and 77th Army divisions and 1st Marine Brigade (August 10) after a tough struggle costing more than 1,400 killed and 5,600 more U.S. personnel wounded. Of the Japanese defenders, some 10,000 were killed during the operation, and several hundred more died rather than surrender during the long mopping-up that followed.

1944, July 25–August 2. Tinian. The island was invaded by the 2nd and 4th Marine divisions, and taken after the usual heavy resistance. U.S. losses were 389 killed and 1,816 wounded.

COMMENT. *Capture of the Marianas and the Battle of the Philippine Sea doomed Japan to defeat. The Tojo cabinet resigned (July 18).*

Return to the Philippines, July–December, 1944

Strategic and Operational Background

Strategy of the next move of the war was settled in principle at a conference at Pearl Harbor in July. President Roosevelt weighed 2 different concepts of approach to the final objective: an assault on Japan itself. Admiral Nimitz favored intermediate moves on Formosa or China; General MacArthur insisted on assault first to free the Philippines (for both military and political reasons), then on to Japan. Roosevelt accepted MacArthur's plan. Army and navy staffs, in close cooperation, plotted progressive moves: MacArthur on Mindanao, Nimitz on Yap, and a joint assault on Leyte. While MacArthur would then invade Luzon, Nimitz would take Iwo Jima and Okinawa.

As soon as the Marianas operation ended, Nimitz set Spruance and his Fifth Fleet staff to planning the future Iwo Jima and Okinawa operations, while Halsey and Third Fleet staff were allotted the immediate task against Yap. Actually, this was a shift in commanders and staffs only; the ships and men were unchanged. What had been the Fifth Fleet was now the Third;

Mitscher's Fast Carrier Task Force, TF 58, became TF 38; V Amphibious Force became III Amphibious Force; etc.

PRELIMINARIES

1944, September 15. Morotai and Pelelieu. MacArthur landed troops on Morotai to establish a forward air base; opposition was negligible. Nimitz, in a coordinated move, struck Pelelieu in the Palau Islands. Marines of Major General Roy S. Geiger's III Amphibious Corps (part of Vice Admiral **Theodore S. Wilkinson**'s III Amphibious Force) there met tough resistance from tenacious defenders under General **Sadal Inone** (September 15–October 13). Simultaneously Wilkinson, using army troops, assaulted and captured **Angaur** (September 17–20) and occupied, unopposed, Ulithi Atoll, about 100 miles west of Yap (September 23). Ulithi's magnificent harbor became a fleet base for the Halsey-Mitscher Third Fleet team. Mopping up of scattered resistance continued in the Palaus for several weeks (November 25).

1944, September 15. Change of Plan. In support of the Morotai-Pelelieu operations, Halsey's Third Fleet carriers had struck Yap, Ulithi, and the Palaus to neutralize nearby Japanese bases and soften the defenses (September 6). They had then swept the Philippine coast (September 9–13). Encountering slight resistance, Halsey sent a message to Nimitz, recommending cancellation of the proposed intermediate landings on Mindanao and Yap, which seemed unnecessary, and urging that the Leyte assault be mounted as soon as possible. Nimitz, agreeing, queried the Joint Chiefs of Staff, then attending the Quebec Conference. Nimitz offered to "loan" MacArthur his III Amphibious Force and his Army XXIV Corps. MacArthur, queried by the JCS if he could step up his Leyte landings to October 20 instead of December 20, as originally planned, immediately agreed (September 15). Accordingly, a directive was issued that day.

COMMENT. *Never had American military men better displayed flexibility and initiative than did Halsey, Nimitz, MacArthur, and the JCS. MacArthur's decision to advance by 2 months the timetable of a fullscale amphibious assault was audacious in light of the monumental logistical problems involved.*

1944, October 7–16. Prelude to Invasion. The Third Fleet moved to paralyze the remnants of Japanese air power. While army land-based planes—the Fifth AF from New Guinea and the Seventh from the Marianas—attacked all enemy bases within range, long-range B-29s of XX Bomber Command bombed Formosa from bases in China (October 10). Meanwhile, Halsey hit shipping and shore installations in and around Okinawa, then turned south toward Formosa and Luzon (October 11).

1944, October 13–16. The Battle off Formosa. The Japanese air units on Formosa struck back fiercely; 2 cruisers were severely damaged, other vessels hit. Misled by fires on these ships and the flames of many shot-down Japanese planes, Japanese radio reports claimed a great naval victory. Halsey, hoping to decoy the Combined Fleet to action, left 1 carrier group to escort his cripples and took the rest of the Third Fleet east into the Philippines Sea (October 14–15). Toyoda, taking the bait, sent 600 of his carrier planes from Japan to Formosa airfields to complete the "destruction" of the American fleet. Halsey, returning toward Formosa, in 2 days destroyed about half these planes (October 15–16). The total score in these operations was more than 650 Japanese planes destroyed, many others crippled, and numerous shore installations smashed. Most serious was the wrecking of the rebuilt Japanese carrier air squadrons. U.S. losses were 2 cruisers badly damaged, several others hit, and 75 planes lost.

Visayas Campaign

The Philippines were defended by approximately 350,000 Japanese under the command of General Yamashita, conqueror of Malaya and Singapore. General Sosaku Suzuki's Thirty-fifth Army defended the southern and central Philippines.

1944, October 14–19. Approach to Leyte. A vast amphibious armada was closing on the Leyte coast, some 700 vessels, carrying 200,000 men of General Krueger's U.S. Sixth Army, in Admiral Kinkaid's Seventh Fleet. Wilkinson's III and Barbey's VII Amphibious Forces were supported by Rear Admiral **J. B. Oldendorf**'s gunfire-support group—6 battleships (reconditioned survivors of Pearl Harbor), 5 heavy cruisers (including **HMAS** *Shropshire*) and 4 light cruisers, and 66 destroyers (including convoy escorts). The air-support group (Rear Admiral **Thomas L. Sprague**) consisted of 16 escort carriers, 9 destroyers, and 11 destroyer escorts. Far in the offing (now neutralizing Luzon air bases and guarding San Bernardino and Surigao straits) was Halsey's Third Fleet, with Mitscher's fast carrier TF 38 its nucleus: 8 heavy and 8 light carriers, 6 fast new battleships, 6 heavy and 9 light cruisers, and 58 destroyers. Mitscher's planes numbered more than 1,000. Four American submarines were engaged.

COMMENT. *One operational blemish marred this magnificent amphibious array: command was joint, instead of being unified. MacArthur commanded the ground forces and Kinkaid's Seventh Fleet, while Halsey, still under Nimitz' direction, had a dual mission: first, to destroy the Japanese fleet should it put to sea; and second, to give all possible assistance to Kinkaid and the landings. The Americans had no reason to believe that these 2 missions could be contradictory, but the Japanese had a plan which the Americans had not foreseen.*

The "Sho" Plan. *Japan, feeling the effect of continuous air and submarine attacks against her shipping, had long realized that American seizure of the Philippines, Formosa, or the Ryukyus would split the empire in two; separate the Southern Resources Area, reservoir for fuel oil and gasoline, from the homeland. Accordingly, the "Sho" (Victory) Plan had been devised as a last-ditch gamble by the Combined Fleet. In principle it embodied use of a portion of the now scattered elements of the fleet to decoy the American carrier force, while the remainder, converging on any new landing area, would overwhelm the amphibious support and isolate the troops ashore. The plan, good in principle, had one major flaw. Without adequate air power it would not work, and the Battle off Formosa had ruined most of Japan's carefully reconstituted naval air strength. Toyoda hoped, however, that landbased air units in the Philippines might make up for this serious deficiency.*

1944, October 20–22. Leyte Landings. Following intensive reconnaissance and a heavy naval bombardment, Sixth Army's X Corps (Major General **Franklin C. Sibert**) and Lieutenant General **John R. Hodge**'s XXIV Corps began landing. The Japanese 16th Division (General **Tomochika**), 16,000 strong, garrisoning the island, gave but little initial opposition. By midnight, 132,400 men and nearly 200,000 tons of supply and equipment were landed, and Kinkaid's combat ships were hurrying south to Surigao Strait to meet a Japanese naval threat. General MacArthur, accompanied by Philippine President **Sergio Osmeña,** came ashore, broadcasting his return (October 22).

The Battle for Leyte Gulf

1944, October 17–23. The Preliminaries. Warned of American intentions, disclosed by the Leyte reconnaissance (October 17), Japan put the **Sho Plan** into immediate effect. The Combined Fleet moved from widely scattered bases. Ozawa's Northern Force (or Third Fleet)—the 4 remaining carriers, 2 battleships, 3 cruisers, and 8 destroyers—steamed from Japan toward Luzon to lure the U.S. Third Fleet away from the landing area; the carriers were

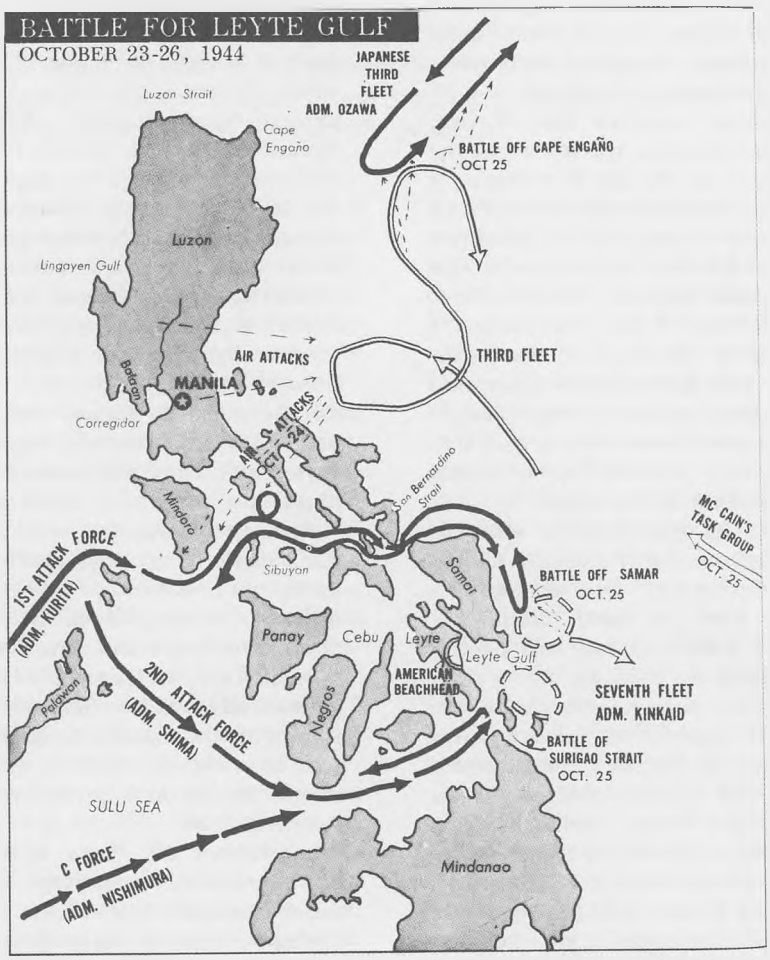
phantoms of naval air power, carrying only 116 planes with half-trained pilots. Kurita's Center Force (or First Attack Force)—2 superbattleships, 3 other battleships, 12 cruisers, and 15 destroyers—moving northeast from Malaya, Borneo, and the China Sea, was to traverse the San Bernardino Strait. The Southern Force (or C Force) of Vice Admiral **Shoji Nishimura**'s 2 battleships, 1 heavy cruiser, and 4 destroyers (from Malaya and Borneo), backed up by Vice Admiral **Kiyohide Shima**'s Second Attack Force of 2 heavy and 1 light cruisers and 4 destroyers (from the Ryukyus), moved southeast and east to pass through the Surigao Strait between Mindanao and Leyte. These Center-Southern Force pincers were to destroy all U.S. amphibious forces in Leyte Gulf by a concerted attack, marooning the troops ashore.

1944, October 23–24. Battle of the Sibuyan Sea. U.S. submarines *Darter* and *Dace* discovered Kurita's Center Force as it entered Palawan Passage from the South China Sea. Flashing word to Halsey, the subs sank 2 heavy cruisers and damaged a third. Kurita, continuing into the Sibuyan Sea, was attacked by Mitscher's TF 38. The superbattleship *Musashi* was sunk after 2 days of incessant bombardment and several other vessels damaged. Kurita turned around and headed westward again (late October 24). Halsey assumed he was retreating. Meanwhile, Japanese land-based planes harassed a division of TF 38. Most were shot down, but USS *Princeton* (light carrier) was sunk and USS *Birmingham* (cruiser) severely damaged. Unknown to Halsey, after dark Kurita changed course again and headed doggedly for San Bernardino Strait.

1944, October 24–25. Battle of Surigao Strait. Warned of the approach of the Japanese Southern Force, Kinkaid placed Oldendorf's gun-support ships to intercept it. Reconnoitering PT boats picked up Nishimura's force that night, moving in single line ahead. Two converging destroyer attacks torpedoed the battleship *Fuso* and 4 destroyers. Nishimura's crippled line then ran into Oldendorf's main force, which crossed his "T." American gunfire and torpedoes sank all except 1 destroyer; Nishimura went down with his flagship, *Yamashiro.* Shima's force, bringing up the rear, now ran the gantlet of PT-boat attack, which crippled 1 light cruiser. Attempting now to retire, Shima's flagship collided with one of Nishimura's mortally wounded vessels. Oldendorf pursued through the strait. Between his fire and planes from Admiral Thomas L. Sprague's escort carriers and land-based army planes, another Japanese cruiser was sunk. The rest of Shima's force escaped as Oldendorf—his mission accomplished, and knowing he might have to fight another battle immediately—turned back.

1944, October 25, Dawn. San Bernardino Strait. Kurita, hoping still to join Nishimura in Leyte Gulf, debouched unopposed from San Bernardino Strait and turned south. Halsey, with his entire force, was rushing after Ozawa's decoy carrier force, which had been sighted to the far north. Word received of Kurita's retirement in the Sibuyan Sea the previous afternoon, combined with overenthusiastic reports from his flyers, led Halsey to believe Kurita was permanently out of the fight. So—his dual mission in mind—Halsey was rushing northward with all available elements of the Third Fleet to destroy the Japanese carrier force. He failed to inform Kinkaid.

1944, October 25, Early A.M. Battle off Samar. Kurita's southward advance completely surprised Rear Admiral **Clifton A. F. Sprague,** commanding an escort carrier group of Kinkaid's amphibious force, supporting land operations. Sprague, with 6 escort carriers, 3 destroyers, and 4 destroyer escorts, armed only with 5-in. guns, found himself giving battle to 4 battleships, 6 heavy cruisers, and about 10 destroyers. In an amazing running fight, during which his aircraft, armed with relatively harmless fragmentation bombs (for support of land operations), harassed the heavily gunned Japanese ships, while his destroyers nipped boldly at them, Sprague and his escort flattops fought off disaster. One carrier—USS *Gambier Bay*—was sunk, 2 destroyers and 1 destroyer escort went down, and Kurita's ships were closing in. But planes from other escort-carrier groups—



all fleeing south to rejoin Kinkaid's Seventh Fleet—were now attacking Center Force. Kurita, with victory in his hands, hauled off, thinking he was being attacked by TF 38, his decision bolstered by reports that Nishimura's Southern Force had been demolished. At first Kurita thought to reinforce Ozawa, then gave that up and retreated through San Bernardino Strait. He was now harried by American reinforcements—planes from Rear Admiral **John S. McCain**'s task group of Halsey's fleet—rushing back in response to Seventh Fleet calls for help. Meanwhile, Admiral Thomas L. Sprague's escort carriers and Oldendorf's force, returning from the Surigao Strait fight, were assailed by land-based planes—including the first Japanese kamikaze attacks, which sank USS *St. Lô* and damaged several other ships.

1944, October 25. Battle off Cape Engaño. Halsey's headlong northward rush to catch the Japanese carrier force bore fruit at 2:20 A.M., when Mitscher's search planes picked it up. With dawn came the first of 3 successive plane strikes. Ozawa, who had put nearly all his small force of planes ashore to operate from land bases, had only antiaircraft fire to oppose the U.S. planes and it was not enough. By nightfall,

all 4 Japanese carriers were sunk as well as 5 other of the remaining ships. Two battleships, 2 light cruisers, and 6 destroyers escaped. Halsey, infuriated by a query from Nimitz at Pearl Harbor, demanding explanation of his "failure" to help Kinkaid, went steaming southward at "flank speed" (full speed) with most of his fleet.

COMMENT. *The 4-phased naval Battle of Leyte Gulf ended the Japanese fleet as an organized fighting force. Four carriers, 3 battleships, 6 heavy and 4 light cruisers, 11 destroyers, and a submarine were sunk; nearly every other ship engaged was damaged. About 500 planes were lost; some 10,500 Japanese sailors and airmen were dead. American losses were 1 light carrier, 2 escort carriers, 2 destroyers, 1 destroyer escort, and more than 200 aircraft. About 2,800 Americans had been killed, some 1,000 additional wounded. In this, the greatest naval battle ever joined, 282 vessels were involved: 216 USN, 2 RAN, 64 Japanese. Estimated man-power strengths were 143,668 USN and RAN, 42,800 Japanese.*

Both Halsey and Kurita may be criticized, the one for abandoning the Leyte Gulf area to chase Ozawa, the other for his timidity in retreating at the moment of victory. In mitigation, one notes that Halsey was on the horns of his dual-mission dilemma; he had no way of knowing that Ozawa's carrier force was only a decoy. As for Kurita, he was bewildered by conflicting reports and already shaken by 2 previous severe joltings. For all he knew, he might be throwing the only Japanese naval strength that remained afloat into the jaws of the overwhelming force of the entire U.S. Navy. So he limped away, victim of an overly complicated plan and of his own fears.

STRUGGLE FOR LEYTE

1944, October 21–December 31. General Yamashita, Japanese commander in the Philippines, recovering from the strategic surprise of the landings, decided to fight for Leyte. While the veteran 16th Division carried on a skillful delaying action, reinforcements were hurried from Luzon and the Visayas to build up the Thirty-fifth Army. Between October 23 and December 11, some 45,000 men and 10,000 tons of supply arrived in small increments, carried mostly by fast-running destroyer transports. U.S. Navy and long-range Army planes then dried up the supply routes, despite fierce Japanese land-based air strikes, which only expended a great part of the remaining Japanese air power. Toward the end, only a trickle of sailing craft traversed the Leyte waters. Meanwhile, U.S. Sixth Army made slow progress against desperately defended delaying positions in the central mountain ridge. Progress was further impeded by tropical storms, which turned the few dirt roads into quagmires. On the right, X Corps, by overland and amphibious movements, was approaching Limon, the northern anchor of Suzuki's defense line (November 7). On the left, XXIV Corps hammered at the precipitous heights protecting Ormoc, the southern Japanese key point and principal port. An amphibious lift (December 7) threatened Suzuki's southern flank, while at the same time a desperate but ineffective Japanese air drop farther east was repelled. Krueger, reinforced, launched a double envelopment (December 7–8), taking both Limon and Ormoc (December 10). The 77th Division from the south and 1st Cavalry and 24th divisions from the north then met (December 20) at Libungao, surrounding Suzuki's combat elements and cutting him off from his last remaining port, Palompom. All organized resistance collapsed Christmas Day. The Japanese had suffered over 70,000 casualties in the campaign; American losses were 15,584. Meanwhile, a foothold had been gained on adjoining Samar (late October).

1944, December 15. Seizure of Mindoro. A bold amphibious operation put a task force of approximately brigade strength ashore on Mindoro in the northern Visayas, just south of Luzon, to establish an advance air base for MacArthur's coming assault on Luzon.

COMMENT. *Japan's election to force a decision in the Leyte area had cost her a fatally crippled fleet and air force, and a serious reduction in ground-force strength in the Philippines. As the year ended, Japan had lost the war. Her communications with the Southern Resources Area were severed, her merchant fleet reduced from a tonnage of 6 million in 1941 to 2.5 (60 percent of this loss caused by U.S. submarines). Approx-*

imately 135,000 of her soldiers were marooned, helpless, behind the American advance. But as yet Japan would not admit defeat.

The Strategic Air Offensive

Operations from India and China

1944, April–May. B-29s to India. With the agreement of Britain and China, new American B-29 "Superfortress" bombers began to arrive at bases near Calcutta. These planes of the XX Bomber Command were to undertake long-range strategic bombardment from India, and were also to strike industrial targets in Manchuria and southern Japan itself from bases in China. These powerful, heavily armed planes could fly over 350 mph, and could carry 20,000 pounds of bombs against targets over 1,500 miles from their bases. They were each armed with 12 .50-cal. machine guns and a 20-mm. cannon.

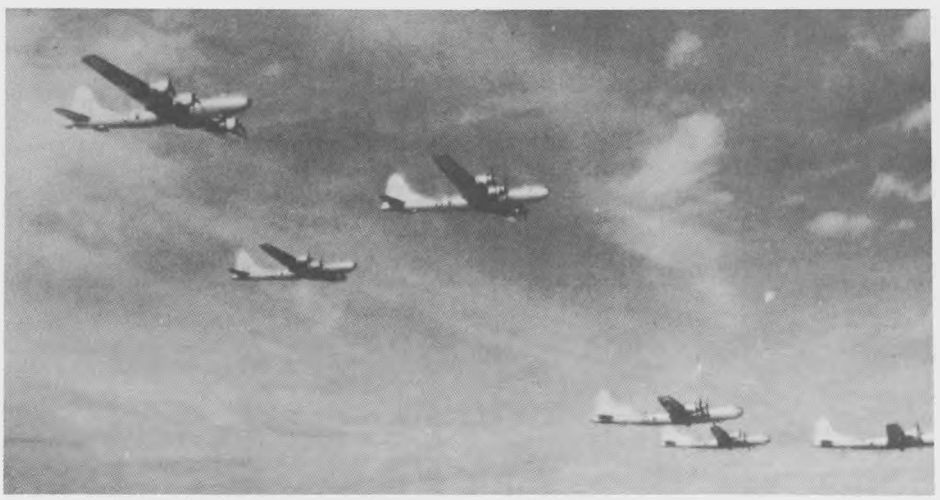
1944, June 5. First B-29 Combat Mission. This was an attack on railway targets at Bangkok, Thailand.

1944, June 15. First Strike against Japan. Five airfields with extra-long runways had been painstakingly built by coolie labor near Ch'engtu, in western China. Sixty-eight planes, staged to the Ch'engtu bases from Calcutta, hit a steel plant on the Japanese island of Kyushu.

1944, June–December. Continuing Strategic Missions. Because of the limitations on the total amounts of supplies and equipment that could be carried over the Hump, the B-29s were not based permanently in China. Barracks, repair shops, and heavy support equipment were all near the Calcutta bases. The B-29s carried their own fuel and bombs from India to Ch'engtu in preparation for their periodic raids on Kyushu, southern Manchuria, and Formosa. In between these raids, the great planes continued to attack Japanese bases in Southeast Asia from their fields near Calcutta. Under Major General **Curtis E. LeMay,** the XX Bomber Command became increasingly efficient.

Operations from the Marianas

1944, October. B-29s to Saipan. As soon as the Marianas islands of Saipan, Tinian, and Guam had been captured (see pp. 1285–1286), army B-17 and B-24 bombers moved into the captured Japanese airfields to strike at the Bonins and Iwo Jima (August—September). At the



B-29 Superfortresses

same time, army engineers began to lengthen existing runways and to build new extra-long airfields on all available areas of the islands. As soon as the first of these was ready, B-29s of the XXI Bomber Command began to arrive.

1944, October 28. First B-29 Mission from the Marianas. This was the first of several operational-training missions against Truk.

1944, November 24. First Marianas Mission against Japan. More than 100 B-29s initiated the final strategic air offensive against Japan by a raid against an aircraft plant near Tokyo.

1944, November–December. Continuing the Strategic Offensive. About once every 5 days, 100 to 120 Superfortresses struck industrial targets in Japan. The raids usually began with a dawn take-off from the Marianas airfields, the planes climbing steadily until they reached an altitude of about 30,000 feet as they crossed the Japanese coast. Resistance was fierce. Fighter planes based on Iwo Jima struck at the bombers as they flew over in the mornings and as they returned in the early afternoons. Over Japan, 200 or more fighters, with the best pilots available, rose to meet them. The Superfortresses shot down many of the attackers, but suffered severely themselves. By the end of the year, XXI Bomber Command was losing about 6 percent of the planes that started on every raid, exceeding the theoretically acceptable maximum loss rate of 5 percent.

The War Against Japan, 1945

Strategy and Policy

The collapse of Japan's defensive perimeter in the east and south, resulting from the crushing defeats suffered in 1944 by Japan's land, sea, and air forces in the Southwest Pacific and Pacific Ocean Areas, made the outcome of the war against Japan a foregone conclusion to Allied military leadership. Surprisingly, at the outset of the year, it seemed even possible that Japan's defeat might come as early as Germany's. This was the result not so much of the Allies' failing to adhere to their basic strategy of "Germany first"—though the Americans *had* deviated from that strategy to some extent—but was rather the natural consequence of the amazing military might which America had been able to mobilize in 3 short years. No nation in history had ever before been able to exercise so much power over so wide an expanse of the globe, and with such efficiency, as that wielded by the United States at the beginning of 1945. So immense was this power, in fact, and so inevitable the outcome of the war, that the first steps toward U.S. demobilization were actually begun before either Germany or Japan completely collapsed.

Inevitable though the outcome now was, it was also evident that the final subjugation of Japan could be both time-consuming and costly in lives and money. Despite some setbacks, the Japanese hold on Burma had not been seriously impaired, and they still ruled all of the vast Southern Resources Area. And though their sea lines of communication to that rich area had been cut, they had opened a new overland route as a result of their successful campaigns in China in 1944. The American naval blockade of Japan, combined with a relatively small strategic air offensive, was putting a serious strain on Japan's home economy, but the vigorous Japanese air defense effort was already threatening the morale of B-29 airmen. Japanese tenacity, despite their many defeats, caused Allied military leaders to fear that Japan itself, defended by more than 2,000,000 hardy fighting men, could not be conquered without a costly and sanguinary struggle on the 4 main islands themselves. Possibly the most serious danger was that conquest of the home islands might not end the war at all. On the mainland of Asia, Japan

controlled Korea, Manchuria, and the richest and most populous areas of China; this vast Asiatic region was garrisoned by a military force well in excess of 1,000,000 undefeated veteran troops. If the Japanese government and a substantial portion of the military strength remaining in Japan should be shifted to the continent, the war might be protracted interminably.

Accordingly, Allied military leaders—and particularly the American JCS—were extremely anxious to draw Russia into the war against Japan at the earliest possible date, solely to hasten the end of the war and avoid probable excessively high casualties. But the agreements reached at Yalta and later at Potsdam were inept and naïve. The Soviets' week-long participation in the war did not affect the outcome. By that time Japan had not only been brought to the verge of economic and social collapse by physical punishment; she had suffered a psychological shock so severe as to make it easy for a warrior people to acknowledge defeat for the first time in recorded Japanese history. The death of President Roosevelt (April 12) brought Vice President **Harry S Truman** to U.S. leadership, but there were no changes in policy or strategy.

Land and Air Operations in Asia

Burma

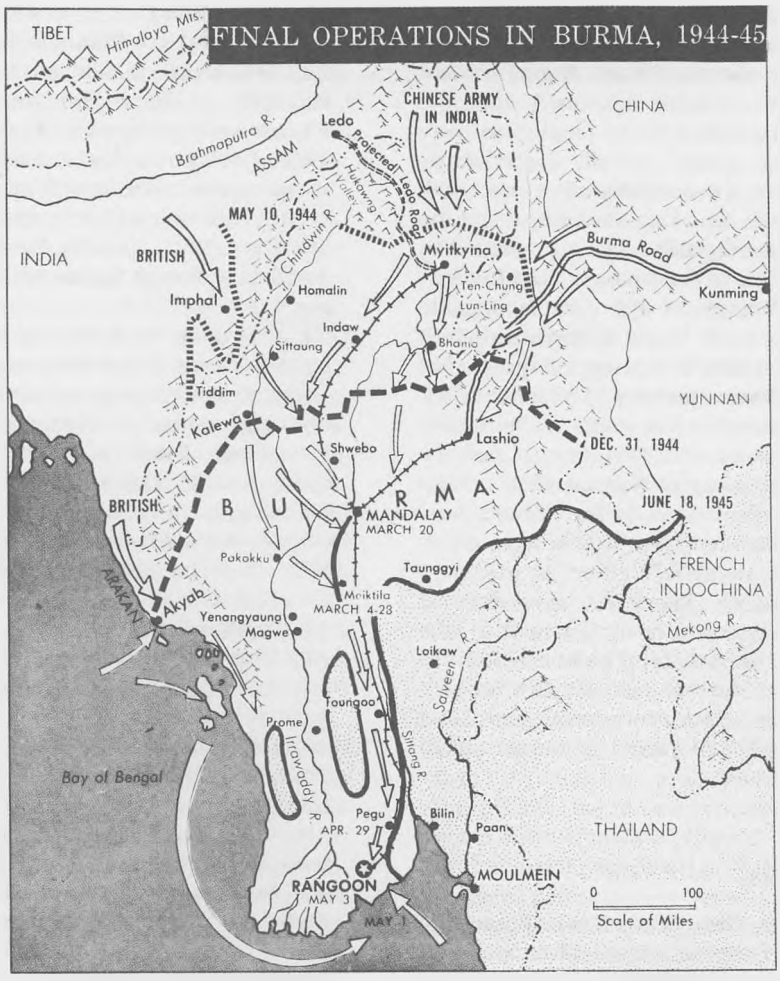
As the year opened, 4 major Allied land forces were converging on Burma. Along the coast of the Bay of Bengal, the British XV Corps was once more pushing through Arakan toward Akyab. Slim's Fourteenth Army was advancing on a broad front through the jungled hills between the Chindwin and Irrawaddy rivers. In north Burma, forces of General Sultan's Northern Combat Area Command were approaching the Burma Road from the west, while Marshal Wei Li-huang's Y-Force was slowly moving down that road from Yunnan toward the Burma-China frontier. Though these Allied forces were encountering minor opposition, it was obvious that the 3 Japanese armies holding Burma were merely conducting delaying actions. Though few of the Allied leaders realized it—with the possible and notable exception of General Slim—General Kimura, overall commander of Japan's Burma Area Army, was deliberately luring his foes into central Burma for a climactic battle in an area where he expected to have a logistical superiority that would ensure his victory.

THIRD ARAKAN CAMPAIGN

The renewed advance of the XV Corps had begun on December 12, 1944. In accordance with Kimura's plan, opposition was negligible, and Akyab fell quickly (January 4). The XV Corps prepared for an amphibious invasion of south Burma. Meanwhile, its hold on Arakan was ensured by a number of minor operations to seize and secure the major islands along the Arakan coast.

NORTH BURMA AND YUNNAN

1945, January 1–27. Converging Advances of NCAC and Y-Forces. The Japanese 56th Division withdrew deliberately and skillfully in the face of these 2 converging Chinese drives, making the Chinese fight for every foot of ground. Although units of the 38th Division reached Chinese soil at Loiwing early in the month (January 6), and patrol contacts be-



tween the 2 converging forces were continuous from that time, the Japanese stubbornly prevented a link along the road.

1945, January 27. Reopening the Burma Road. The Y-Force pushed across the Shweli River to Burmese soil at **Wanting,** just as troops of the Chinese New First Army (38th and 30th divisions) fought their way to the Burma Road at **Mong Yu;** so skillful was the Japanese withdrawal that the 2 Chinese forces became engaged in a fire fight with each other near Mong Yu before they realized that their elusive enemy had slipped away to new positions blocking further southward advance along the Burma Road toward Lashio.

1945, January 28–February 4. First Land Convoy to China. With great fanfare a truck convoy (manned largely by junketing American newspapermen) left Namkham in Burma for Kunming, arriving amidst rejoicing and celebration. In a magnanimous gesture, Chiang Kai-shek proposed that the combined Burma and Ledo roads be renamed the Stilwell Road, in honor of the man most responsible for breaking the land blockade of China.

1945, January–March. Climactic Opera-

tions in North Burma. Although the Chinese and American troops had accomplished their main mission, the war in north Burma was not yet over. Bitter fighting continued along the Burma Road as Allied troops fought their way toward Lashio against typically dogged Japanese resistance. A particularly fierce battle took place when the American Mars Brigade in the vicinity of **Namhpakka** vainly attempted to block the retreat of the Japanese 56th Division to Lashio (January 18–February 3). Equally fierce was the battle fought by the British 36th Division in forcing a crossing of the Shweli River at **Myitson** (January 31–February 21). A few days later, in the center of the NCAC zone, the Chinese 50th Division captured the silver and tin mines of **Namtu** after a sharp engagement (February 27). The Chinese New First Army captured **Lashio** after a desultory 2-day battle (March 6–7). The 50th Division captured **Hsipaw** (March 15), then repulsed Japanese counterattacks until joined by the 30th Division (March 24). The British 36th Division reached the road near Maymyo (March 30), returning to Fourteenth Army control and ending an 8-month period of uninterrupted combat.

CENTRAL BURMA

1945, January. Slim Sets a Trap. Because of the paucity of resistance to his advance toward the Irrawaddy, Slim divined Kimura's plan to counterattack the Fourteenth Army as it attempted to cross the river north of Mandalay. Accordingly, he left a dummy IV Corps headquarters near Shwebo, on his left flank, maintaining active radio contact with the 19th Indian Division, which continued to advance directly toward the river. Meanwhile, he secretly and rapidly moved the IV Corps and its 2 remaining divisions south, behind the XXXIII Corps, to make a surprise crossing of the Irrawaddy near Pakokku, 100 miles below Mandalay. While the 19th Division and XXXIII Corps were occupying Japanese attention by crossing the river farther north, Slim planned a rapid crossing by the IV Corps, which would then dash eastward, cut Kimura's line of communications to Rangoon, and encircle the Japanese Fifteenth and Thirty-third armies.

1945, January 14. Irrawaddy Crossing of the 19th Division. This crossing at **Kyaukmyaung** was immediately violently counterattacked, confirming Slim's estimate of Japanese intentions. With difficulty the division held its bridgehead, thanks to powerful artillery and air support.

1945, February 12. Crossing of the XXXIII Corps. Having deliberately attracted Japanese attention to their preparations, the divisions of this corps crossed the river against determined resistance just south of Mandalay; losses were heavy, but the bridgehead was established and maintained.

1945, February 13. Crossing of the IV Corps. Slim's planned encirclement got off to a brilliant start with a surprise crossing against negligible opposition. The 7th and 17th Divisions (the latter almost completely armored) established a bridgehead at Pagan and began a quick build-up.

1945, February 21–28. Dash for Meiktila. While the 7th Division held the Irrawaddy bridgehead at Pagan, the tanks of the 17th Division raced to seize the strategic road and railroad junctions at Meiktila and Thazi.

1945, February 28–March 4. Capture of Meiktila. Having seized the town against desperate resistance by surprised, outnumbered Japanese rear-area troops, the British prepared for the inevitable Japanese reaction. Reinforcements were rushed to the 17th Division by air, and an air-supply operation from India was initiated. Kimura, realizing what had happened, began to withdraw his reserves from the Mandalay area and prepared for an all-out assault on Meiktila. Violent, confused fighting raged around that town and Thazi (March 5–15).

1945, March 9–21. Battle of Mandalay. The 19th Division north of Mandalay and the XXXIII Corps to the south broke out of their bridgeheads (February 26) and converged on the old royal capital of Burma. While the XXXIII Corps kept the Japanese busy south of

the city, the 19th Division captured it in a dogged house-to-house battle.

1945, March 15–31. The Battle of Meiktila. Elements of 3 Japanese divisions, commanded by capable Major General Tanaka transferred from north Burma, began an all-out assault on the 17th Indian Division in order to reopen communications with Rangoon. The Japanese closely invested the British and Indian troops, and for a while captured their airfield, forcing them to rely upon parachute drop for supply. Equally determined British counterattacks recovered the airfield, however. With the XXXIII Corps and remainder of the IV Corps moving rapidly toward Meiktila, Kimura realized that he could not fight his way into the town in time to avoid disaster (March 28). He therefore reopened a new line of retreat through Thazi. The IV Corps broke through to relieve the 17th Division, thus ending the climactic battle of the war in Burma.

COMMENT. *Slim's brilliant but simple plan went exactly as he had envisaged it. The plan, and its execution, warrant Slim's inclusion in the list of Britain's greatest generals.*

1945, March 26. Revolt of Aung San. Burmese General Aung San, who had been ordered by the Japanese to take his small Burma National Army from Rangoon to the assistance of the Japanese troops at Meiktila, left the city, ostensibly in compliance with orders, then ordered execution of long-laid plans for a Burmese revolt against the Japanese. Aung San had long been in secret contact with British agents, having become disillusioned with the Japanese. Though the effort was not decisive, nonetheless guerrilla harassment by these Burmese added significantly to the discomfiture of the Japanese.

1945, April 1–May 1. Race for Rangoon. Anticipating early arrival of the monsoon, which would immobilize his tanks, now able to maneuver so easily on the rock-hard, sun-baked rice paddies, Slim turned southward. Several sharp engagements were fought, but the British, spearheaded by the 17th Indian Division, had little difficulty in slashing through confused and uncoordinated Japanese units. The main problem was to get supplies of fuel and food to the troops by airlift; for the last 10 days of the month the 17th Division was on half-rations. Pegu, only 45 miles from Rangoon, was captured the same day the rains began (May 1).

1945, May 1. Amphibious Landing of the XV Corps. Anxious to beat the Fourteenth Army for the honor of capturing Rangoon, elements of the XV Corps landed at the mouth of the Rangoon River. The Japanese secretly evacuated the city that day.

1945, May 2. Capture of Rangoon. While the 17th Division was trying to push through mud north of the city and the XV Corps was organizing for a short advance upriver to capture the town from the south, an RAF pilot, flying over the city, could see no Japanese. He landed at Mingaladon, walked into the town, and, with the assistance of the local civilian population, released Allied prisoners from the city jail. He had himself rowed down the river to inform the British Army that Rangoon had been captured by the RAF.

1945, May–August. Pursuit and Consolidation. Despite the great difficulties of movement over the flooded countryside, the British pushed after the Japanese elements withdrawing in disorder toward Thailand. There were no further major engagements, though there were frequent patrol clashes between pursuers and pursued. Meanwhile, plans were being made by Admiral Mountbatten's SEAC headquarters for a major amphibious operation against Singapore later in the year.

China

1945, January–February. Renewed Japanese Offensive in Southeast China. Japanese forces made wide gains in the coastal regions between Hankow and the French Indochina border. Three more U.S. Fourteenth Air Force bases fell.

1945, March 9, Japanese Consolidation in Indochina. French officials, heretofore permitted to retain some internal control despite Japanese occupation, were imprisoned.

1945, March–May. Japanese Offensive in Central China. A drive through the fertile area between the Yellow and Yangtze rivers netted the ripening crops, and the important Fourteenth Air Force base at **Laohokow** was overrun (March 26–April 8). The drive was checked (April 10) by the Chinese, as was a later attempt against **Changteh** and **Chihkiang** (May 8).

1945, April 5. U.S.S.R. Abrogates Treaty with Japan. As war in Europe neared its end, the Kremlin renounced the 1941 neutrality treaty (see p. 1231), which had served Stalin's purpose of avoiding a two-front war.

1945, April–August. Soviet Buildup in East Asia. Commanded by Marshal **Aleksandr M. Vasilevskiy,** the Soviet Far East Command consisted of 11 combined arms armies, 1 tank army, 3 air armies, and 3 air defense armies with a total strength of over 1,500,000 troops, 26,000 guns and mortars, 5,500 tanks, and 3,800 aircraft in three army groups. In Manchuria, Japanese General **Otoza Yamada**'s Kwantung Army had a paper strength of 925,000 men, of which 300,000 were unreliable Manchukuo puppet units with about 6,000 guns and mortars, 1,200 tanks, and 1,900 aircraft. Most veteran troops of the Kwantung Army had been sent to oppose the American offensives in the Pacific.

1945, May–August. Japanese Withdrawals. Realizing he was overextended, General Okamura began movements north to reinforce the Kwantung Army in Manchuria, now menaced by the Soviet threat to enter the war. Chinese counteroffensives cut the corridor to Indochina (May 30). By July 1, more than 100,000 Japanese troops were marooned in the Canton area, while some 100,000 additional had moved back into North China, harassed by the U.S. Fourteenth and Tenth Air Forces. The former American airfield at Kweilin was recaptured (July 27).

1945, August 8. U.S.S.R. Declares War on Japan. The U.S.S.R. declared war following the atomic bombing of Hiroshima to ensure participation in the war before Japan surrendered or collapsed.

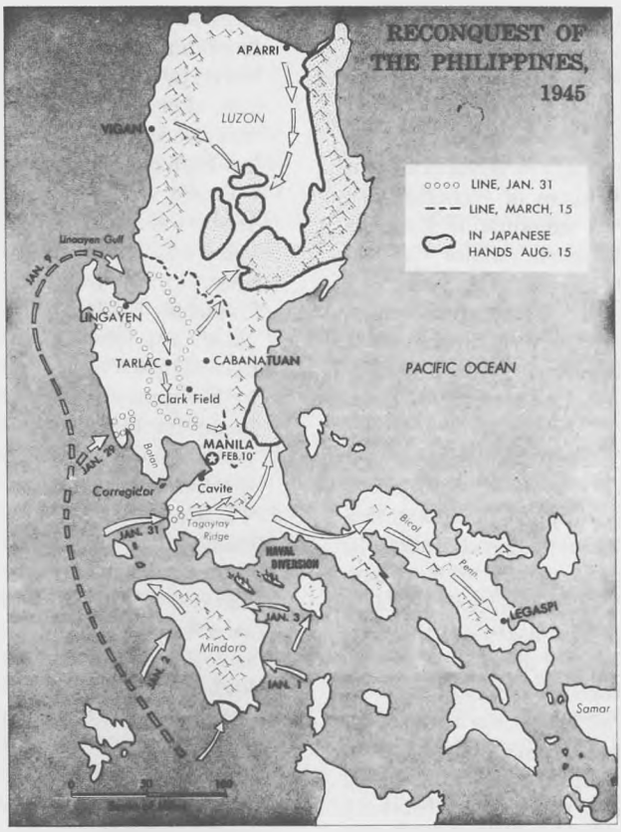
1945, August 9–17. Soviet Offensive. Bad weather contributed to Soviet surprise. Marshal **Rodion Y. Malinovsky**'s 3rd Far Eastern Army Group, making the main effort, swept eastward from Outer Mongolia on a broad front. Marshal **Kirill A. Meretzkov**'s 1st FEAG moved west and south from the line Khabarovsk-Vladivostok. Between these pincers General **Maxim Purkhayev**'s 2nd FEAG advanced south from the Amur River line. Japanese resistance was bitter, except that the bold and unexpected crossing of the almost trackless Khingan Mountains by the Soviet Sixth Guards Tank Army was virtually unopposed. When this army, closely followed by the remainder of Malinovskiy's troops, reached the Central Manchurian Plain (August 13), a strategic envelopment of the main forces of the Kwantung Army had been achieved, and Japanese resistance began to collapse. Russian spearheads drove Japanese troops back across the Yalu into Korea. The advance into Korea continued after the official cessation of hostilities (August 15). Scattered fighting throughout Manchuria and northern Korea ended soon after.

1945, August 14. Japanese Surrender. **(See p. 1309.)**

Operations in the Southwest Pacific Area

The Philippines

Yamashita's Defensive Strategy. General Yamashita had 250,000 ground troops on Luzon, deficient to some extent in equipment, but still formidable. His air strength had been dissipated, with little support expected from other sources. He delayed and finally retired to the mountainous central and western regions of Luzon, where formidable defensive works had been prepared. He did not contemplate defense of Manila.



LUZON

1945, January 2–8. The Approach to Luzon. Lifted by the Seventh Fleet, the Sixth Army moved from Leyte through the Surigao Strait and up the western coast of Luzon to Lingayen Gulf. Planes from Halsey's fast carriers were strafing Formosa, as was the China-based XX Bomber Command. Kenney's planes from Leyte and from the new-won base on Mindoro (see p. 1291) attempted to neutralize Japanese aircraft on Luzon, but kamikaze pilots took heavy toll of Admiral Oldendorf's gunfire-support group—both on the way and after it started bombarding the Lingayen shore (January 6). One escort carrier was sunk, another damaged. The battleship *New Mexico*, 1 heavy and 4 light cruisers, and several other vessels were severely damaged. The attacks petered out as the Japanese eliminated themselves by their suicide attacks, while Halsey's and Kenney's planes hammered their bases.

1945, January 9. Lingayen Landing. Krueger's army landed, almost without opposition, on a 2-corps front, 4 divisions abreast. By nightfall 68,000 men were ashore, from Lingayen to Damortis.

1945, January 10–February 2. From Lingayen to Manila Bay. Major General **Oscar W. Griswold**'s XIV Corps, on the right, pushed aside Japanese delaying forces to reach the Camp O'Donnell-Fort Stotsenberg-Clark Field area (January 23), where it turned westward for a week of serious fighting, while 1 regiment pushed down to Calumpit (January 31) and the marshy delta of the Pampanga River. Major

General **Innis P. Swift**'s I Corps, on the left, had more difficult going, fighting both to the east and south. Elements of his 1st Cavalry Division met the 37th Division at Plaridel (February 2).

1945, January 30–February 4. Arrival of the Eighth Army. Task forces of Eichelberger's Eighth Army made 2 amphibious landings north and south of Manila, Major General **Charles P. Hall**'s XI Corps in the Subic Bay area (January 30) seizing **Olongapo** to assist in sealing off the Bataan Peninsula, which was quickly occupied to prevent the Japanese from emulating the American defense of 1942. Two regiments of the 11th Airborne Division, under Major General **Joseph M. Swing,** landed at **Nasugbu** (January 31), southwest of Manila. Eichelberger then air-dropped the remaining regiment of the division on Tagaytay Ridge, 30 miles south of Manila (February 3). Next day, advance elements of the division reached Paranaque, on the southern outskirts of the city, where a stiff defense halted them.

1945, February 3–March 4. Recapture of Manila. While the 37th Division battered its way south into the city, the 1st Cavalry Division swung wide to east and then south, linking with the 11th Airborne Division. By February 22, the garrison had been driven into the old walled city (Intramuros) and Manila was isolated from Yamashita's main forces. American military and civilian prisoners held at Santo Tomás University and in Bilibid Prison were released. Inside Intramuros were the survivors of the fanatical Japanese garrison, some 18,000 strong—mainly naval personnel—commanded by Rear Admiral **Mitsuji Iwafuchi.** Ignoring Yamashita's instructions not to defend the city, Iwafuchi embarked on a suicidal defense, ruthlessly demolishing and burning many buildings. Street by street and house by house, the 37th Division now pried the defenders out. When the last resistance ended, historic old Intramuros was a mass of rubble, in which at least 16,665 Japanese lay dead.

1945, February 16–April 17. Clearing Manila Bay. Corregidor, "Gibraltar of the East," was assaulted by a skillful paratroop drop on its tiny Topside golf course after intensive air and artillery bombardment (February 16). This was followed by an amphibious landing from Bataan and, after another suicidal defense, the fortress was cleared (February 27). Many of its garrison lay buried in blown-up Malinta Hill tunnel. Counted were 4,417 Japanese dead; 19 prisoners were taken. U.S. casualties were 209 killed and 725 wounded. Cargo began moving into the bay (March 15). **Fort Drum,** the "concrete battleship" on El Fraile rock, fell (April 13) when gasoline and fuel oil were poured down its ventilators and ignited, cooking the garrison. That same day a landing was made on **Caballo Island,** but its garrison was not subdued for 2 weeks. Carabao Island was taken without opposition (April 17).

1945, March 15–August 15. The Mountain Campaign. The weight of the Sixth Army's mass turned east, north, and south in an interminable series of assaults on Yamashita's mountain defenses. In the north, the North Luzon Guerrilla Force and newly reorganized Philippine Army assisted in pocketing the bulk of the Japanese forces in the Cordillera Central and the Sierra Madres. East of Manila, a smaller group held the ridges on the Pacific coast. When Yamashita surrendered at the end of the war (August 15), he still had an organized force of some 50,000 troops.

COMMENT. *The Luzon campaign cost the U.S. 7,933 killed and 32,732 wounded. Japanese losses were more than 192,000 killed and about 9,700 captured in combat. Yamashita, hampered by poor communications and incomplete information from his own high command, was still further impeded by the lack of command unity. It would appear that he did the best that could be expected under the circumstances. On the U.S. side, the ratio of battle deaths—24 Japanese to 1 American, a tremendous exception to the rule that the attacker must expect higher losses than the attacked—is tribute to the genius of MacArthur and the skill of Krueger.*

THE VISAYAS AND SOUTHERN ISLANDS

1945, February–August. Eichelberger's Campaign. Concurrently with the Luzon

campaign, the Eighth Army was charged with the freeing of the remainder of the Philippines, garrisoned by elements of the Japanese Thirty-fifth Army—some 102,000 strong—under General Suzuki. He was directed by Yamashita to delay and defend as long as possible. He decided to concentrate his main defense on Mindanao. Beginning with Palawan, Eighth Army task forces made 50 amphibious landings. Barbey's VII Amphibious Force furnished part of the lifts, supplemented by Army Engineer amphibious special brigades. Air support was provided by Kenney's land-based planes. Each operation followed the same pattern: an assault landing, Japanese withdrawal to the interior, securing of the island, and departure of the troops, leaving mop-up to the extensive native guerrilla forces present.

1945, April 17–July 15. Mindanao. Here, with 2 divisions and some naval troops, Suzuki put up a stiff defense. Concentric landings from the north, east, and south finally pushed the Japanese into 2 groups in the center of the island, where they remained until conclusion of hostilities. Eighth Army casualties during the entire Philippine campaign totaled 2,556 killed and 9,412 wounded. Approximately 50,000 Japanese were killed in the Visayan-Southern Islands Campaign.

NEW GUINEA AND NETHERLANDS EAST INDIES

1945, January–August. The Bypassed Areas. Blamey's Australian troops were charged with containing and mopping up Japanese pockets of resistance in New Guinea and the Bismarck and Solomon archipelagos. Contenting himself with containment on New Britain, Blamey undertook aggressive operations on Bougainville in the Solomons and on New Guinea.

1945, May–August. Borneo. Tarakan Island on the northeast coast, Brunei Bay on the northwest coast, and Balikpapan on the southeast were all assaulted in amphibious moves lifted by Seventh Fleet task forces containing also units of the Royal Australian Navy. Air support was furnished by Kenney's air forces (also containing Australian elements).

1945, May 1–June 22. Tarakan. A brigade of the Australian 9th Division, with a detachment of Netherlands troops, was landed. Japanese resistance was determined, but finally overwhelmed.

1945, June 10. Brunei Bay. The Australian 9th Division quickly seized a wide perimeter and established airfields.

1945, July 1–10. Balikpapan. Following heavy naval and air bombardments, the Australian 7th Division landed and seized all major objectives.

COMMENT. *None of the operations in this area had any appreciable effect on the war. The Borneo operations were originally conceived as part of MacArthur's plan to recapture Java and restore the lawful government. As revised, its major objective was seizure of the principal oil-producing areas.*

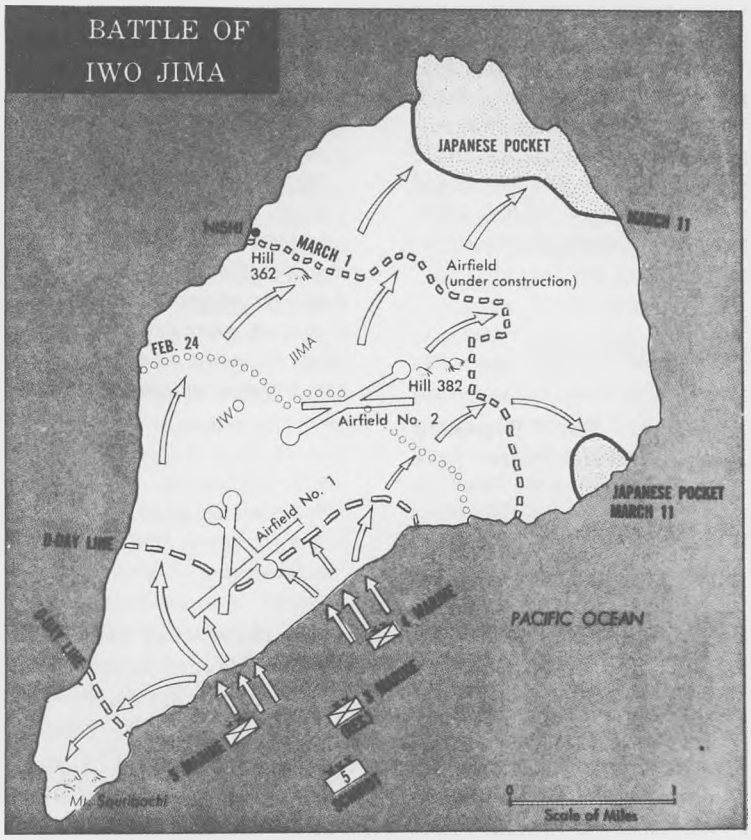
Operations in the Pacific Ocean Areas

IWO JIMA

American Plans and Preparations. Possession of this pear-shaped rocky island in the Bonin group, only 8 square miles in area, was essential to U.S. advance toward Japan. In Japanese hands it menaced U.S. bombers from Saipan harassing the Japanese mainland at extreme range. In U.S. hands it would become a splendid forward air base. Nimitz's armada, now become the Fifth Fleet, with the Spruance-Turner command team replacing Halsey and his staff, moved against it, lifting Major General **Harry Schmidt**'s V Amphibious Corps—the 3rd, 4th, and 5th Marine divisions.

Japanese Plans and Preparations. Major General **Tadamichi Kuribayashi** commanded more than 22,000 Japanese army and naval troops garrisoning the island. Honeycombed with concealed gun emplacements, concrete pillboxes, and mine fields expertly interlaced, it was one of the most strongly fortified positions to be assaulted during the war. Kuribayashi elected a static defense, his troops protected in an elaborate underground cave system against the incessant bombings long preceding the assault and the 3-day naval bombardment immediately before it.

1945, February 19–March 24. Invasion. Schmidt came ashore (February 19) on the southeast coast, the 4th and 5th Marine divisions abreast and the 3rd in reserve, to be met by intensive fire—front, flank, and enfilade. Taking 2,420 casualties the first day, the Marines cut the island in 2, the 5th Marine Division turning left to assault Mt. Suribachi, the other divisions driving to the right. Naval gunfire gave continuous accurate support as the attackers inched forward through the volcanic dust. Mt. Suribachi was stormed (February 23) and the American flag raised on its crest. By March 11 the remnants of the defenders were



pinned on the northern tip of the island. Organized resistance ended (March 16). Next day, 16 B-29s returning from Japan made safe emergency landings, thanks to the U.S. Marine Corps.

COMMENT. *Slight Japanese aerial opposition was encountered. A kamikaze crashed on the carrier* Saratoga (*February 21*), *destroying 42 planes and killing 123 men; 192 more were wounded. Several other vessels were also damaged that day by kamikazes. Total Marine casualties were 6,891 killed and 18,070 wounded. Only 212 of the Japanese garrison surrendered. Counted dead were more than 21,000; many others were sealed in their underground shelters. Before the war ended, Iwo Jima had proved its usefulness; 2,251 B-29s had made emergency landings, sparing the lives of 24,761 U.S. airmen.*

Okinawa

American Plans and Preparations. Final preliminary to invasion of the Japanese mainland was possession of the Ryukyu group, midway between Formosa and Kyushu, southernmost island of Japan. Operation "Iceberg" was organized for the task, with Okinawa, largest island in the group, the principal objective. Under Nimitz' command, Spruance's Fifth Fleet would lift U.S. Army Lieutenant General **Simon Bolivar Buckner**'s Tenth Army (some 180,000 in the assault force and additional reserves lying in New Caledonia): the XXIV Corps (Major General **John R. Hodge**) and III Marine Amphibious Corps (Major General **R. S. Geiger**). This would be the largest and most complicated amphibious expedition undertaken in the Pacific. Turner commanded the actual amphibious operation, while Mitscher's fast carrier force sought control of the air. Mitscher's TF 58 was supplemented by the Royal Navy's newly joined carrier force: 4 carriers and 1 battleship under Vice-Admiral **H. B. Rawlings,** R.N. The carrier forces' task was complicated by the fact that while Okinawa was beyond range of American land-based fighter planes, it was within reach of Japanese fighter planes from Formosa and Kyushu. Thus the carriers would have to supply cover from the expected kamikaze attacks, to which Japan was now evidently committed, as well as tactical support for the ground troops.

Japanese Plans and Preparations. On Okinawa was the Japanese Thirty-second Army, under Lieutenant General **Mitsuru Ushijima,** with some 130,000 men. As usual, an extensive defense system had been organized, particularly on the southern part of the island, in the midst of a native civilian population of more than 450,000.

1945, March 14–31. Preliminary Air Operations. To isolate the battlefield, Mitscher's carriers attacked Japanese air bases on Kyushu. Rawlings' British carrier force began neutralization of the Sakishima island group, midway between Formosa and Okinawa, strafing airfields and intercepting strikes destined for the battle area. Army long-range bombers attacked Formosa and industrial targets on Honshu. The big carriers received rough treatment from kamikazes; U.S.S. *Franklin* was so badly crippled that she had to be towed away by the cruiser *Pittsburgh*, and both the *Yorktown* and the *Wasp* were damaged. Special fire-fighting equipment devised by the New York City Fire Department saved all 3 vessels, but 825 officers and men were killed and 534 wounded. Temporary paralysis of the Japanese air bases was accomplished, and 169 of the 193 kamikazes committed were wiped out. (The steel-decked British carriers suffered less from kamikaze strikes than did the American teak-decked ships.)

1945, March 23–31. Preassault Operations. Admiral **W. H. P. Blandy**'s gunfire and escort-carrier ships of the amphibious force closed on

Okinawa and began (March 23) continuous air and artillery strafing. At the same time the 77th Division was lifted to the outlying Kerama Retto and Keise Shima island groups to secure a fleet anchorage and seaplane base in the Kerama roadstead and artillery positions on Keise. Capture on Kerama of some 350 small "suicide" boats—each carrying 2 depth bombs and some hand grenades, and manned by a 2- or 3-man crew—removed a potential hazard to the landing operations. The splendid roadstead at once became a valuable repair and supply base for the Navy.

1945, April 1–4. The Landings. While a simulated landing force demonstrated off the southeast coast to distract Japanese attention, an 8-mile-wide column of landing craft disgorged from 1,300 naval vessels assembled off the Hagushi beaches on the western coast. It struck the beaches in 8 successive waves on a bright Easter Sunday morning—under cover of a tremendous air and artillery bombardment—and some 60,000 troops established their beachhead without any ground opposition. The Marine III Amphibious Corps, on the left, turned north; it would receive little opposition in clearing the entire northern area of the island (April 13) and nearby **Ie Shima** Island (April 16–20). The XXIV Corps, turning south, found itself (April 4) suddenly brought up short by the

heavily organized **Machinato Line** of the Japanese Shuri Zone: an interlocking system of mountain defenses organized in great depth.

1945, April 6–7. Operation TEN-GO. The Japanese high command decided on a coordinated air-naval suicidal attack to check further American advance against the mainland. A kamikaze assault would cripple the amphibious force off Okinawa. The monster battleship *Yamato,* with 1 light cruiser and 8 destroyers, would crush what was left. The vessels, without any air cover, carrying only sufficient fuel for a one-way trip, but crammed with ammunition, hurried out of the Inland Sea (April 6) on the Japanese Navy's last desperate throw of the dice. Spruance, warned by U.S. submarines of the sortie, prepared to meet it with Mitscher's carrier force, backed up by his battle fleet.

1945, April 7. First Kamikaze Assault. Some 355 kamikaze and 340 additional orthodox dive bombers and torpedo planes swept in on the amphibious force. Although 383 of the attackers were lost, when the furious strike ended, 2 U.S. destroyers, 2 ammunition ships, a mine sweeper, and a landing ship had been sunk and 24 other vessels damaged.

1945, April 7. End of the *Yamato.* Vice Admiral **Sejichi Ito,** in the *Yamato,* leading his forlorn hope, was met by Mitscher's carrier planes shortly after noon. Wave after wave of American planes struck home on the monster's topsides with bombs and torpedoes. After nearly four hours of constant pummeling, the *Yamato* lay helpless on her beam ends. At 4:23 she slid under, with 2,488 officers and men. The cruiser, too, went down, as did 4 destroyers. The other 4, though damaged, managed to scuttle away. In all, 3,655 Japanese sailors met their deaths in this last fling of the Imperial Navy. U.S. losses were some 15 planes and 84 seamen and pilots.

COMMENT. *Had the Japanese high command concentrated its remaining air power to provide cover for* Yamato *until she reached Okinawa, she might have done severe damage to the amphibious force before her end came. The 42,000-yard range of her 9 18.1-in. guns far exceeded that of American battleships.*

1945, April 6–30. Advance and Stalemate. The XXIV Corps battered its way south against increasing opposition. The Machinato Line was pierced (April 24), but finally the advance was brought to a standstill before the concealed positions of the **Shuri Zone**'s main line of resistance (April 28). General Buckner, with the 77th Division and the 1st and 6th Marine divisions of the III Amphibious Corps still in hand, was faced with a dilemma: to attempt a frontal attack or—as the Marines suggested—effect an envelopment by amphibious landings on the southern tip of the island behind the Japanese. He decided on a double envelopment—frontal attacks piercing both flanks—and reorganized on a 2-corps front, with the Marines on the right.

COMMENT. *The situation was analogous to that in Italy in 1943. The proposed Marine amphibious landing, like the Anzio operation, would have been beyond range of mutual support from the main front. On the other hand, Buckner had relatively more amphibious lift. The Marines and some army critics believe this was an error of overcaution.*

1945, April 12–13. Renewal of Kamikaze Assaults. Meanwhile, the Japanese suicide air strikes resumed. Nine more separate attacks were launched during the remainder of the campaign, until Japanese air strength had been expended. In all, more than 3,000 suicidal sorties hit the amphibious force and Mitscher's carriers, netting a total of 21 U.S. ships sunk, 43 additional permanently put out of action, and 23 more put out of action for a month or more.

1945, May 3–4. Japanese Counterattack. Ushijima hurled his 24th Division, supported by tanks and artillery, against the U.S. 7th Division on the eastern flank. A minor attack at the same time hit the 1st Marine Division on the western flank. A kamikaze attack from Kyushu supported the thrusts. Caught by American artillery and tactical aircraft, supplemented by naval gunfire, the Japanese offensive was crushed with loss of 5,000 men killed. U.S. losses were 1,066. In addition, the assault had disclosed the positions of heretofore hidden Japanese artillery.

1945, May 11–31. Buckner's Offensive. Under appalling weather conditions and despite

bitter resistance, both flanks of the Japanese zone were finally pierced. Disengaging, Ushijima retreated slowly to the hill masses of the southern tip of the island.

1945, June 1–22. Final Operations. A climactic assault brought the 2 American prongs—Marine and Army—around and over the last organized position (June 22) and all resistance ceased. Neither Buckner nor Ushijima lived to see the end. Buckner was killed by an artillery shell as he peered from a Marine observation post on the front line (June 18) and Ushijima committed hara-kiri (ritual suicide), just before his headquarters was overrun, 4 days later.

Japanese losses on Okinawa totaled 107,500 known dead and probably 20,000 additional sealed in their caves during the fighting; 7,400 prisoners were taken. Tenth Army casualties were 7,374 killed and 32,056 wounded. Navy losses were some 5,000 killed and 4,600 wounded. About 4,000 Japanese planes had been lost in combat and an equal number destroyed from other causes. U.S. naval aircraft lost totaled 763. The Fifth Fleet lost 36 vessels sunk and 368 damaged.

COMMENT. *The campaign had cost Japan the remainder of her effective navy and much of her air force. Ushijima's tactical decision not to oppose the landings—probably dictated by the high command—was a grievous error. The tactical handling of the Fifth Fleet was brilliant. The logistical support of a great fleet at sea over a protracted period—unprecedented—was a most remarkable demonstration of efficiency.*

The Strategic Air Offensive

1945, January—February. Reappraisal. The B-29 attacks on Japan had not been as successful as the American JCS had hoped they would be. Japanese fighter defense had been more effective than anticipated, and the loss rate of 6 percent per mission was lowering morale and efficiency of the bomber crews. The weather over Japan at 30,000 feet was worse than had been expected; winds of several hundred miles per hour had thrown bombers off course and decreased effectiveness of their attacks; ice forming on the wings and on the windshields affected plane performance, obscured pilots' vision, and reduced accuracy of instruments and bombsights. Fog often made visual bombing impossible, and radar was not sufficiently accurate for precise concentration of bombs on targets from a small number of planes. Nevertheless, the raids were having some effect on Japan. The strain of frequent alerts reduced worker efficiency and lowered the morale of the whole population. Furthermore, the concentration of attacks on aircraft plants had forced the dispersal of these plants, causing a decline in Japanese aircraft production. Since the operations from the Marianas were more effective and less costly than those through Ch'engtu in China, it was decided to shift the XX Bomber Command from India to the Marianas so as to bring the whole Twentieth Air Force (General **Nathan F. Twining**) together. Meanwhile, General LeMay, because of his experience and success with the XX Bomber Command, was ordered from India to the Marianas to command the XXI Bomber Command.

1945, February–March. Developing New Tactics. The dispersal of Japanese aircraft plants, plus continuing high losses among bomber crews, caused General LeMay and his staff to decide to change the tactics to try a new bombing method that LeMay and Chennault had worked out in joint operations in China: low-level incendiary attacks instead of high-level, high-explosive bombing attacks.

1945, March 9–10. The Tokyo Raid. A night attack by 334 B-29s, flying at about 7,000 feet, initiated the new tactics. A total of 1,667 tons of incendiary bombs was dropped in the most destructive single air raid in history. Widespread fires created a fire storm similar to those which had devastated Hamburg, Dresden, and Darmstadt in Germany. Fifteen square miles of the city were destroyed; more than 83,000 people were killed, nearly 100,000 injured.

1945, March 9–19. Inaugurating the New Phase of Strategic Bombardment. A new pattern of operations was created as the success of the Tokyo raid was repeated 4 times in 10 nights. The low-level attacks permitted the

bombers to carry nearly three times heavier bomb loads than those they could lift to 30,000 feet. But because of the danger of Japanese antiaircraft fire and Japanese fighter defense, the raids were made at night. A total of 9,365 tons of incendiary bombs was dropped, 3 times the weight of bombs dropped on Japan during the previous 3½-month period. Thirty-two square miles of the most important industrial areas of Japan were destroyed. Perhaps most important, only 22 B-29s were lost on these raids—1.4 percent of 1,595 sorties. This dramatic reduction in losses was due to ineffectiveness of Japanese fighters in night operations, plus the use of Iwo Jima as a navigational aid and an emergency landing field. Morale of the Superfortress crews rose, and so did the efficiency of their operations.

1945, April 7. Appearance of American Escort Fighters. The VII Fighter Command, moved to Iwo Jima shortly after its capture, began to send its long-range P-47 Thunderbolt fighters, and its even more effective P-51 Mustangs, as escorts with the B-29s, which now began to mix medium-level daylight bombing raids with the low-level night raids. Losses of Japanese fighter planes mounted rapidly, while those of the B-29s continued to decline. American planes soon had clear air superiority over the heart of Japan (May–August).

1945, May–August. Climax of the Strategic Campaign. The arrival of the planes of the XX Bomber Command from India and China (April) increased the intensity of the raids. This continued to mount steadily as more air strips were built in the Marianas and as more planes arrived from the United States. The industrial areas of Tokyo, Nagoya, Kobe, Osaka, and Yokohama—Japan's 5 largest cities—were completely destroyed. The morale of the Japanese people plummeted. Millions had become homeless, and the government could not provide them with places to sleep. Food became scarce as the effects of the bombing on the transportation system, combined with Allied naval blockade, began to have its effect. And as the B-29s began to drop mines in Japanese ports, the blockade became even more effective. By midsummer the strategic bombing offensive had brought Japan to the verge of economic and moral collapse.

The Collapse of Japan

Relentless Pressure

1945, January–August. The Submarines and the Blockade. American submarines had been the first to bring the effects of the war home to the Japanese people through a stringent blockade, which began to have some effect in 1943. In these final months of the war, they roamed the waters of the China Sea and the coasts of Japan, making the blockade ever more effective. During the war they sank more than 1,100 Japanese merchant ships, totaling 4,800,000 tons of shipping—over 56 percent of the total lost by Japan. They also sank 201 warships, totaling 540,000 tons, including 1 battleship and 8 aircraft carriers. Some 52 American submarines were lost, most without a trace, unknown and unsung heroes of the war.

1945, June–August. Preparation for Invasion. The staffs of General MacArthur and Admiral Nimitz completed plans for 2 massive invasions of the main Japanese islands. One, Operation "Olympic" (November), was to strike southern Kyushu. Operation "Coronet" was to follow in March 1946, the mightiest amphibious force ever assembled, against the Tokyo plain of Honshu. Meanwhile, 3 main forces were setting the stage for these assaults by unrelenting onslaughts against the Japanese Empire: (1) the submarines of the Pacific Fleet (see above), (2) the B-29s of the Twentieth Air Force (see p. 1307), and (3) the Fast Carrier Task Force (see below).

1945, July 10–August 15. Last Raids of the Carriers. After its long ordeal off Okinawa (see p. 1306), Mitscher's Task Force 38 (once more under Halsey) rested briefly at its Ulithi anchorage, repairing damage and taking on supplies and replacements. Mitscher then sped back to the coast of Japan, where his planes added to the terrible punishment being delivered by the

B-29s. The Fast Carrier Task Force included more than 1,000 American and 244 British planes. During these 5 final weeks of operations, the Americans lost 290 planes, the British 72, mostly to Japanese antiaircraft fire. During that time, they destroyed more than 3,000 Japanese planes in the air and on the ground.

The Atomic Bombs

1945, July 16. Explosion at Alamogordo. The first experimental atomic bomb was exploded at Alamogordo, N.M. Meanwhile, the 509th Composite Group of the U.S. Army Air Forces was established, and carried out secret training, in preparation for dropping atomic bombs, in the desert areas of Utah.

1945, July. Debate on Employment of Atomic Weapons. Among the few U.S. officials who knew about the atomic-bomb possibility, a high-level debate took place on whether these terrible weapons should be used and, if so, how. Some felt it would be immoral to use such destructive weapons. Others felt that it would be unnecessary, since they expected Japan to collapse soon anyway because of the blockade and the strategic-bombing offensive. After careful study, however, the JCS and a group of senior officials headed by Secretary of War Henry L. Stimson recommended that the bombs be employed. They believed that the shock of the terrible explosions might convince Japanese military leaders that they could not hope to continue the struggle, and that the very destructiveness of the weapons would give Japanese military men an excuse to surrender. Otherwise, the Americans feared, Japan's 4 million undefeated soldiers would continue fighting in Japan, China, and Manchuria, killing many thousands of Allies as they went down to defeat. Thus, even though these bombs would cause terrible losses, American leaders believed that hastening the end of the war would eventually save more lives than the bombs would take.

1945, July 27. Potsdam Proclamation. At the final war meeting of the heads of state of the U.K., U.S., and U.S.S.R., Truman and Prime Minister **Clement Attlee** (who had just replaced Churchill) issued a virtual ultimatum to Japan. The circumstances indicated that Stalin approved, even though Russia and Japan were not at war. Japan was warned that if she did not surrender at once, it would mean "the inevitable and complete destruction of the Japanese armed forces and . . . the utter devastation of the Japanese homeland." Japan attempted to reply through the U.S.S.R., but the Kremlin did not relay the message. Since Japan seemingly did not reply, President Truman therefore approved the plans for dropping atomic bombs on Japan.

1945, August 6. Hiroshima. This city of more than 300,000 people was an important military headquarters and supply depot. It had not yet suffered severely in the bombing offensive. Early in the morning, an air-raid alert was sounded and most people took cover. Realizing, however, that there were only 2 or 3 planes overhead, many people came out, and so most of the population were unprotected when the bomb exploded over the center of the city. Two-thirds of the city was destroyed; 78,150 people were killed (most outright, in explosion or in fires, though some died later from radiation effects); nearly 70,000 others were injured and most of the remaining population suffered long-term radiation damage.

1945, August 9. Nagasaki. The second bomb was exploded over this seaport and industrial city of 230,000 people. Because hills protected portions of the town, less than half the city was destroyed; nearly 40,000 people were killed, about 25,000 injured.

1945, August 9. Soviet Invasion of Manchuria. **(See p. 1298.)**

The Surrender of Japan

1945, August 10. Japan Offers to Surrender. The effect of the atomic bombs was what Stimson's group and the JCS had expected. No one knows how long a fanatically militaristic Japan could have continued the war if the

bombs had not been dropped. It is clear, however, that these weapons, combined with Soviet entry into the war, convinced the Japanese emperor and government that further resistance was hopeless. After brief negotiations by radio, Japan accepted Allied terms for "unconditional surrender," which actually included conditions the Japanese were eager to accept. They were permitted to retain their imperial form of government, and were assured of the integrity of the 4 main islands of the Japanese Empire.

1945, August 15. Cease-Fire. Japanese forces throughout Asia and the islands of the Western Pacific laid down their arms. General MacArthur and American troops began to fly to Japan (August 28).

1945, September 2. The Official Surrender. Representatives of the Japanese government surrendered on board the battleship USS *Missouri* in the heart of the Pacific Fleet, anchored in Tokyo Bay, while American planes filled the air overhead. General MacArthur, appointed by the Allied governments as Supreme Commander for the Allied Powers to initiate the occupation of Japan, received the official surrender of Foreign Minister **Mamoru Shigemetsu.** Among the observers of the ceremony were released prisoners American General Wainwright and British General Percival, whose respective commands in the Philippines and Malaya had been overrun at the outset of the war.

THE COST OF WORLD WAR II[a]

Nations	*Total Forces Mobilized (million)*	*Military Dead*	*Military Wounded*	*Civilian Dead*	*Economic and Financial Costs ($ billion)*
United States	14.9	292,100	571,822	Negligible	350
United Kingdom	6.2	397,762	475,000	65,000	150
France	6	210,671	400,000	108,000	100
Soviet Union	25	7,500,000	14,012,000	10–15,000,000	200
China	6–10	500,000	1,700,000	1,000,000	No estimate
Germany	12.5	2,850,000	7,250,000	500,000	300
Italy	4.5	77,500	120,000	40–100,000	50
Japan	7.4	1,506,000	500,000	300,000	100
All other participants	20	1,500,000	No estimate	14–17,000,000[b]	350
Total[c]	105	15,000,000	No estimate	26–34,000,000	1,600

[a] Many of these figures are approximations or estimates, since official figures are misleading, missing, or contradictory in many instances.

[b] This includes approximately 6,000,000 Jews of Germany and all occupied European nations, and approximately 4,500,000 Poles.

[c] In economic and financial costs, World War II was about 5 times as expensive as World War I: in military deaths alone, it was almost twice as costly; it was about 3 times as destructive in total deaths.

XXI

SUPERPOWERS IN THE NUCLEAR AGE:

1945–1975

MILITARY TRENDS

General Historical Patterns

The period opened at one of the most significant crossroads of world history: inauguration of the Nuclear Age. Man, it seemed, had discovered the power of mass self-destruction (see p. 1308). When the U.S.S.R. in 1949 detonated a nuclear explosion, canceling U.S. monopoly of the secret, the menace chilled the world, threatening as it did mutual annihilation should a general war arise between 2 major powers.

War as the extension of diplomacy, it seemed to many persons, had reached the end of its usefulness. Yet wars, and the threat of war, continued while military men struggled in a fog of experimentation and frustration, seeking on the one hand to harness this new element in weaponry, and on the other to maintain and improve postures of the so-called "conventional" means of warmaking without resort to the use of nuclear fission or fusion.

The confused, tangled, and momentous events of the decades following World War II do not readily yield to systematic historical analysis, partly because they are still too close to be seen in true historical perspective, partly because it was a time of rapid transition. In terms of policy and strategy, and their influence on military affairs, however, 8 major historical patterns seem to have emerged.

Confrontation of the Superpowers

Political and military strategy of all nations was decisively influenced by the confrontation between the United States and the Soviet Union. The 2 superpowers towered over the other nations of the world, and the most important strategic fact of life for each was the existence and power of the other. The friction, or conflict, which resulted from this confrontation was called

the "Cold War." Although, by the end of the period, Cold War grimness had been somewhat ameliorated by determined American and Soviet efforts to achieve a form of "peaceful coexistence," which both sides preferred to call "detente," the confrontation was still the major factor of world affairs, and relations were frequently chilly.

The Technological Revolution

The technological developments of the period may have been even more important historically than the confrontation between the U.S. and the U.S.S.R. In any event, the most significant development strategically was the emergence of nuclear power, although this was hardly more momentous than the beginning of the human conquest of space. The rocket power propelling a multiplicity of proliferating weapons systems was mainly responsible for thrusting vehicles into outer space. Manmade satellites girdled the globe; the U.S.S.R. and U.S. both put manned space ships into orbit and retrieved them safely; and American astronauts trod the moon in 1969 and subsequent years.

Other major technological developments included electronic communications equipment, enabling telegraph, telephone, and radio to be used in ways earlier undreamed of, reducing the time necessary to transmit ideas and the time available to react to events. The related developments of automation and computerization opened new areas of research and accomplishment; new and improved means of transportation reduced travel time, making the world seem ever smaller.

The Political and Economic Revolutions

The rapid break-up of colonial empires in a very brief span of time created many new states where often there was no group adequately prepared as leaders. Related to the end of colonial rule, and also manifested in countries other than the former colonial dependencies, was the phenomenon of "rising expectations" among the populations of the underdeveloped nations. But the ambitions of those poorer nations were frustrated in many ways. The result was increased unrest and instability in these nations and in vast regions of the globe.

The Conspiracy and Challenge of International Communism

The confrontation of 2 superpowers would undoubtedly have involved dangers and crises even if the idea of communism had never existed. Nevertheless, the scope of the Cold War, the violence and the brutality which marked the world political revolution, and a large measure of the bitterness and hatred in the postwar world stemmed directly from the conspiracy of international communism. There were, of course, a number of basic factors which generated communism and which made many people susceptible to its doctrines and promises: poverty, political and social injustice, and authoritarian attempts to maintain an intolerable *status quo*. The Soviet Union and, to an increasing extent, Communist China took advantage of the susceptibility to construct a net of Communist parties throughout the world, and to exploit disorders and unrest in the underdeveloped regions.

The Growing Importance of International and Regional Organizations

This was an era of internationalism. Despite its failures and weaknesses, the United Nations enjoyed a number of successes in restoring or maintaining peace in troubled regions of the world. The concept of regional political organization, more or less within the overall concept of the United Nations but involving only interested nations in problems that are primarily regional and local, was developed in several areas of the world.

The Trend toward Polycentrism

During the latter part of the period, centrifugal forces developed in both of the great sets of alliances which the superpowers built up in the years following World War II. Although both the United States and the Soviet Union were embarrassed and frustrated by this trend, the U.S.S.R. at first suffered more than did the U.S. This was due primarily to the fact that China, under aggressive and militant leadership, had become a leading Asian power and was explicitly challenging the leadership of the U.S.S.R. in the Communist world. The score was at least evened, however, by American loss of prestige in Southeast Asia, where the U.S. was unable to impose its will on a small and relatively underdeveloped nation, North Vietnam, in hostilities short of a major national effort—which the United States was unwilling to undertake.

Efforts toward Arms Control and Disarmament

Over the previous century there had been a number of attempts to establish controls and limitations on the employment of armed force among nations. There had been nothing to compare, however, with the worldwide intensity, sincerity, and sophistication of the search for arms control of the post–World War II era. This was in large part the result of growing realization by all mankind of the potentialities of nuclear weapons, and a feeling of desperate need to control the use of such weapons before they are allowed to destroy civilization.

New Elements in Military Strategy

If only because of the development of nuclear weapons, military men were faced with the greatest problems of transition in military concepts, doctrines, and strategies that have been known in the history of military affairs.

Weapons—or at least evaluations of weapons—for the first time became determinants of strategy instead of merely implements of strategists, possibly because strategic thinking had not yet reached a comparable development and sophistication. Certainly the very threat or possibility of the use of nuclear weapons was a principal factor in shaping the nature of 2 of the major clashes of the period—the Korean and Vietnamese wars—and influenced the adjudication of a host of minor wars and crises. In any event, from the availability of these weapons grew a new concept of limiting conflicts through possession of almost unlimited power. The concept of deterrence, known to man since force was first used against another human, achieved new importance, subtlety, and refinement.

Practically all of the other historical patterns noted above affected modern strategic thinking

in one way or another. For instance, from the Communist conspiracy emerged a new concept of "wars of liberation," in which an ideology harnessed and modified old and well-known methods of making war. The technological revolution brought a weapon system—the long-range strategic bomber—to perfection and had already made it obsolescent. From the impingement of the technological revolution and the economic revolution upon military affairs emerged an essentially civilian concept of cost effectiveness to affect all modern strategic thinking.

As a result of these changes, the organizational arrangements for coordinating the military and political efforts of the nation, and for managing and directing the armed forces, were dramatically changed—particularly in the United States—during these years in an evolutionary process that was not always clearly logical and progressive, but which endeavored to adapt the armed forces and their civilian leadership to the changed environment of conflict.

Strategy and Conflict Management

These new elements in military strategy did not seem to alter the fundamental nature of strategy,* but they immeasurably complicated and confused the processes of formulating strategy, and of exercising it in situations of conflict or likely conflict. Because of these complexities, the term "conflict management" began to be used to describe the control or direction of the resources at the disposal of the strategist or "manager of conflict."

The availability of nuclear weapons, and the almost certain catastrophe which would result from their use in any but the most controlled and limited fashion, divided warfare, and the concepts relating to warfare, into 2 distinct levels: the upper level of conflict, involving a general or "strategic" war of nuclear exchange between the superpowers; and a lower, or "conventional," level in which nuclear weapons would probably not be employed—but their possible use could never be discounted. This lower level, in turn, was considered to have various sublevels, or special forms, of violence. These differentiations were not at all new, but the distinctions took on a new importance not only because of the ever-present possibility of nuclear war but also because of the manner in which Communist theory and practice both exploited and fostered different kinds of violence in support of the nationalistic and international aims of the Communists.

There was not full agreement among military theorists and strategists as to the exact nature of these differentiations and distinctions, but both the significance and the complexities of the concepts can be understood by looking at a "spectrum of conflict" which was produced in one significant theoretical study at the end of the period.

The most significant aspect of strategic theory regarding the upper level of conflict was the concept of **deterrence:** the effort to make the cost of resort to nuclear weapons too high to be

* Based upon an intensive analysis of conflict experience and theoretical development during the period, in 1966 the Historical Evaluation and Research Organization defined 3 aspects of strategy as follows: Strategy—the art of employing all available resources for the purpose of achieving a sucessful outcome in a conflict of human wills. National Strategy—the art of employing all resources available to the highest national authority for the purpose of achieving a successful outcome in a conflict between nations. Military Strategy—the art of employing all resources available to a military commander in an actual or anticipated conflict against hostile, or potentially hostile, armed forces in order to carry out requirements established by national strategy.

profitable. In the United States during this period there was an intensive intellectual effort devoted to the development of theories of deterrence. The result was a series of deterrent strategies. At one extreme, and in vogue in the mid-1950s, was the brutal, direct concept of "massive retaliation": the threat to employ full nuclear force against the instigator of any form of aggression, direct or indirect, conventional or nuclear. The more subtle doctrine of "controlled and flexible response" prevailed in the United States at the close of the period.

The failure of "massive retaliation" demonstrated one of the serious strategic problems posed by the mere availability of nuclear weapons. It is not reasonable to employ truly cataclysmic means to combat threats or dangers which themselves are less than catastrophic. Neither friends nor enemies believed that the U.S. would attack Moscow in response to Kremlin-supported subversion in some remote region of the underdeveloped world. America's friends in Europe were not even certain that if the chips were down they could rely on America's assurances of immediate nuclear response in the event of Soviet aggression in Western Europe. These doubts were affecting both the vigor and stability of the western alliance at the close of the period.

The North Atlantic Treaty Organization (NATO) had emerged early in the period as counterfoil to Soviet aggression in Europe. NATO was unique in that its integrated armed forces, under a single command and backed by U.S. nuclear power controlled by the president of the U.S., constituted the first significant multinational force to arise in peacetime. Effective from the first as a deterrent, its usefulness was marred toward the end of the period by France's intransigent "independent" policy, which included a separate French striking force (*force de frappe*) with equally independent nuclear-power potential.

As the period closed, U.S. strategists had suffered a major defeat in Vietnam in an effort to cope with Communist aggression in an environment in which the existence of nuclear weapons automatically encouraged low-level violence under the "umbrella of mutual nuclear deterrence" caused by the nuclear stalemate between the superpowers.

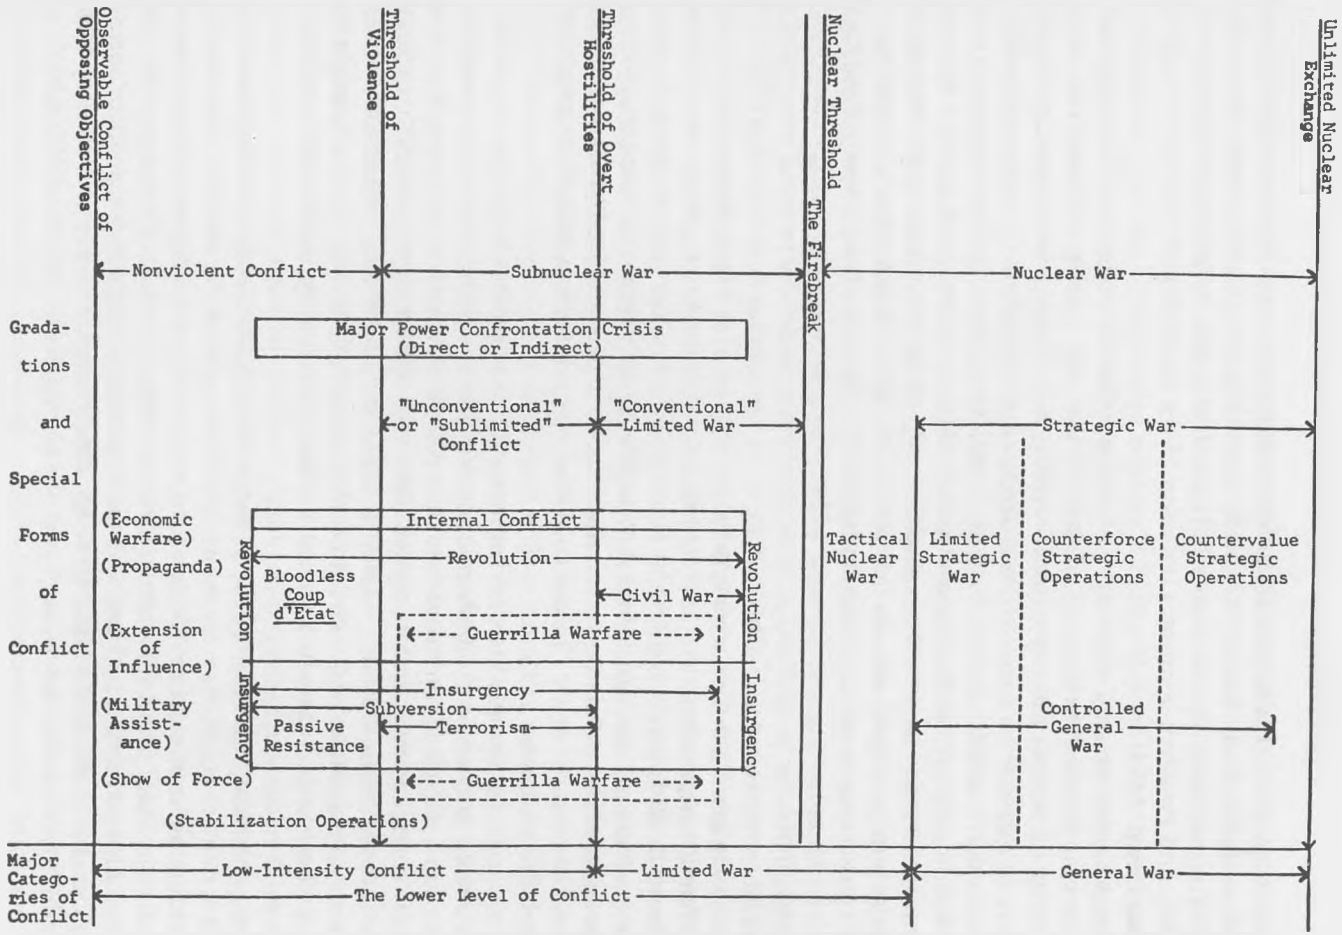
Nevertheless, the United States had developed a strategic policy of military assistance to nations which wished to oppose Communist aggression. Despite the frustrations of Vietnam—and many other frustrations—this policy had been generally successful as a means of projecting U.S. power and influence in the exercise of national strategy in the nuclear age.

On the other hand, the opposing Communist strategy had also enjoyed considerable success. Both the U.S.S.R. and Communist China, exploiting the situation created by the umbrella of mutual nuclear deterrence, kept up incessant thrustings to produce turmoil, expand their respective territorial holdings, and repair damages. In brief, this consisted in exploitation of conflict in 3 classes: civil wars, wars for "national liberation," and wars in defense of Communist regimes. The possible effect of the Sino-Soviet "split" on this strategy was still unclear at the close of the period.

Leadership

One of most unique aspects of this period was the manner in which top-level political leadership became more and more involved in the detailed and day-to-day military operations of military forces in the field and at sea. Outstanding examples were President **Truman**'s relief of General MacArthur from command in Korea (see p. 1361), President Eisenhower's assumption of responsibility in the U-2 incident (see p. 1453), French President de Gaulle's intervention in

THE SPECTRUM OF CONTEMPORARY CONFLICT



Algeria (see p. 1433), the apparently unfortunate control exercised by President Kennedy and his civilian staff in the Cuban debacle of the Bay of Pigs (see p. 1460), Kennedy's control of the so-called "quarantine" which successfully eliminated the Soviet missile threat in Cuba (see p. 1384), and President Johnson's direction of the employment of air power against North Vietnam (see p. 1414).

These actions in no way suggested a reversion to the old tradition of the king-general. They resulted from political recognition of the fact that any conflict situation had within it the potentiality of escalating to uncontrolled nuclear war. Thus a military man, acting on his own initiative in response to a local military situation in traditional (or unconventional) military fashion, could "escalate" a conflict out of control. Civilian leadership's increasing control over operations in or near conflict situations was merely a reflection of the fact that responsible authority must retain to itself the capability to determine what risks are to be taken, and how.

On the purely military side, in this period, **Douglas MacArthur**'s stature as one of the world's great captains was confirmed by his handling of the early operations of the Korean War, with the Inchon landings the capstone of his career. He was later wrong in disputing strategy with his commander in chief and he must also bear considerable personal responsibility for the subsequent temporary defeat of his U.N. forces by unexpected intervention of Chinese Communist armies in late 1950. This reverse no more detracts from MacArthur's military genius than does Waterloo negate Napoleon's overall military stature or Gettysburg that of Robert E. Lee. **Matthew B. Ridgway**'s welding of the multinational U.S. Eighth Army in Korea into a competent war machine, and **James A. Van Fleet**'s later control of that army, were outstanding examples of successful troop leadership. The rapid defeat of the Chinese Nationalists by the Chinese Communists in the Chinese Civil War was evidence of **Mao Tse-tung**'s exceptional political-military genius.

Thus, before the period closed, it became quite evident that leadership in this new era of instantaneous decisions and cataclysmic potentialities was being exercised in a totally new way, a leadership linking field commanders to their political overlords in an increasingly complicated mesh of "command and control" systems far removed from Tennyson's "Theirs not to reason why, / Theirs but to do and die." Unless the field commander knew and adhered to the political objectives and directives of the civilian control, a tactical victory, it seemed, might be ephemeral. In other words, imaginative, creative military initiative must wear the harness of political limitation.

How to prevent subsequent galling and chafing from this tight-fitting harness, and still maintain military equilibrium on future battlefields, was at the period's close a basic problem confronting all commanders—from squad leader to general-issimo. One soldier who performed well under these constraints, however, was America's **Creighton W. Abrams** in Vietnam. Also performing well under similar constraints, although for far different reasons, was North Vietnam's brilliant **Vo Nguyen Giap,** the architect of Viet Minh victory over France and of North Vietnam's ultimate triumph over the United States and South Vietnam.

Weapons, Doctrine and Tactics

General

On land, sea, and in the air, rocketry, which had emerged during World War II after a century-long discard, became a major element of artillery. Its projectiles, capable of carrying either

nuclear or high-explosive warheads, ranged from the giant intercontinental missile (ICBM), with practically worldwide range, to the one-man "bazooka" type of the foot soldier. Rocket missiles fell into 4 general classes: surface-to-surface, surface-to-air, air-to-surface, and air-to-air.

During midperiod, the fear of long-range nuclear bombing by long-range bombers or by intercontinental missiles resulted in abortive attempts to preserve the civil populations from holocaust. By the end of the period, the concept of civil defense had seemingly become less important for its potential saving of life—or reduction of catastrophic casualties—than as an element of the psychological considerations relating to nuclear-deterrent strategy.

Another new aspect of the terror of general war was furnished by the threat of contaminating an enemy country, poisoning atmosphere and vegetation by toxic measures: chemical, biological, or radiological. Communist propaganda played loudly on this theme as part of the strategy of terror. Factually, military scientists in all major nations were studying ways and means of prosecuting chemical and biological warfare as the period drew to a close.

On the Ground

Ground combat during the period produced a series of apparent abnormalities and contradictions, none of them vitiating fundamental principles of war, yet necessitating alterations in doctrine and tactics. The Korean War and later operations in Southeast Asia proved the serious limitations of mechanized-warfare operations in jungle and mountain terrain. Mobility of tactical maneuver—the concentration of fire by movement—depended in such regions on the ability of fleet-footed infantrymen to scramble across country.

The threat of nuclear warfare, with its consequent wide devastation, necessitated dispersion, yet ability for rapid concentration remained equally essential, conditions mutually contradictory. Furthermore, the multiplicity of communications essential to command control under such conditions became an enormous problem.

The helicopter, useful for reconnaissance, supply, transport of small packets of troops, and evacuation of wounded, supplanted the jeep as ubiquitous cross-country vehicle. In U.S. combat doctrine, so-called "sky cavalry" units utilized the helicopter to enhance the cross-country capability of the infantryman, and to provide him with flexible combat and logistical support. Through a confusing welter of statistical claims and counterclaims, the mobility of the helicopter, as well as its vulnerability to ground fire, were clearly demonstrated in the guerrilla-warfare operations in Vietnam.

Still another contradiction was to be found in an experimental trend in hand-weapon usage to the theory of the cone of fire rather than the individual aimed fire of the trained marksman. U.S. ordnance theorists seemingly turned the clock back a century and a half by equipping the American rifleman with a lighter weapon capable of firing 3 different loads: a .22-cal. bullet, lacking the shock action of the heavier calibers; a species of pocket shrapnel (a sheaf of fine steel arrows—*flechettes*); and a cartridge containing 2 bullets—a throwback to the "buck and ball" loads of smoothbore days. This trend seemed to ignore the fact that a host of electronic and optical improvements were increasing the lethal potential of the individual marksman.

The answer was that increased rates of fire were permitting the application to infantry firepower—consciously or not—of concepts of massed fire already pioneered by American field artillery. Reasonable accuracy, combined with such massing, assured effective neutralization of

an enemy, and probably as much or more lethal effect as would have been provided by a smaller volume of more accurately aimed fire. The advantages were undeniable, so long as there was a logistical capability to "feed the battle." There remained, nonetheless, a need for precision, aimed fire among infantrymen as well as in the artillery. There was also evidence that the bayonet, as proven in the Korean War, was still a potential arbiter in hand-to-hand combat.

The days of the elite versus the mass, foreshadowed long ago by the grenadier and the light infantryman, and later by the *Sturmtruppen*, paratroopers, and Special Forces of World War II, seemed to be returning. The green beret of U.S. Special Forces in Vietnam became a status symbol, denoting a superior type of warrior. Whether or not this selectivity would survive cost-effectiveness scrutiny, or whether it might in the long run produce a deleterious inferiority complex in the run-of-the-mill foot soldier, were still moot questions.

The tank, which had emerged from World War II as the major ground battlefield weapon, retained its primacy, actual and potential, in those parts of the world where geography permitted its effective employment. This was demonstrated in the Indian-Pakistani battlefields in the arid Punjab-Kashmir region, as well in the lush farmlands of the Ganges Valley. Tanks dominated the operations of Arabs and Israelis in the Second and Third Arab-Israeli wars. This was only partially modified by the results of the Fourth Arab-Israeli War, in which the dominance was reduced, but not eliminated, by determined infantrymen armed with relatively inexpensive, effective antitank rockets and guided missiles. Despite a partial restoration of balance between infantry and armor in that war, it still seemed that—at least in the mid-1970's—the most effective antitank weapon was still the high-velocity gun of a hostile tank.

At Sea

The essential importance of sea power and its objectives remained unchanged during the period, as attested by the U.S. Navy's unchallenged control of the high seas. Significant trends were the projection of sea power inland and the logistical utilization of surface traffic, demonstrated during the Korean War and later operations in Southeast Asia and Middle East waters.

Nuclear power, combined with advances in rocketry, brought radical changes in both weaponry and propulsion, necessitating equally radical changes in ship construction. The nuclear-powered vessel, surface and submarine, could remain at sea indefinitely without replenishment of fuel if given periodic replenishment of victuals and ammunition from floating depots—an extension of the logistical use of the sea lanes developed by the U.S. Navy during World War II.

The carrier task force remained the queen of maritime weapons systems, although some observers doubted its survivability in general nuclear war. The nuclear-powered submarine, armed with Polaris-type missiles, launched subsurface, extended sea power inland as never before. To many sailors this was the prototype of the future capital ship.

Freedom of the seas from the always increasing threat of submarine warfare and the *guerre de course*, so menacing in 2 world wars, necessitated further development of the hunter-killer doctrine—fast, mobile weapons systems of surface and submarine craft, aided by naval air power, utilizing elaborate electronic instrumentation to detect and destroy enemy underwater craft.

During midperiod, rocket launchers appeared to be displacing tube artillery on naval craft.

Nuclear-powered attack submarine

However, as demonstrated both in Korean waters and very definitely later in the South China Sea, the precision fire of tube artillery was essential both in landing operations and in coastal actions involving small craft; as on land, the theorists were faced with the necessity for establishing proportional quotas of both massed and precision firepower, of both rocket and tube weapons.

Conventional landing operations faced almost certain destruction by nuclear weapons should general war break out. However, for smaller amphibious operations with so-called conventional weapons, the helicopter appeared to be the answer, with vertical assaults largely replacing the surface assaults. But the apparent vulnerability of this item of equipment placed an even greater requirement for control of the air than had been the case in World War II and Korea.

In the Air

Air power's principal problem centered about one crucial question—the respective capabilities of the manned bomber and the missile in delivering nuclear warheads. On the right choice rested, the efficacy of the free world's doctrine of deterrence. As the period ended, opinion was still divided and compromise governed.

Meanwhile, in both missile and manned-aircraft fields, important developments brought more speed and range in all areas of the air-power spectrum. Rate and range of climb increased. Concurrently, technological advances in optics went hand in hand with increased altitude for reconnaissance. The necessity that air and land power become a close-knit tactical team became more apparent. As a result, at least in the U.S., the Tactical Air Force drew closer to ground forces and its separation from the Strategic Air Force became wider.

The problem was far from being solved, however. The tactical use of fixed-wing aircraft in close support was complicated by the fact that the increased speed of jet-propelled combat aircraft restricted its firepower efficacy to a minimal fleeting moment over the target, thus greatly reducing the pilot's capability for identification and delivery of fire. This same condition also impeded the value of fast-flying aircraft in reconnaissance, while vast refinements in ground-force antiaircraft artillery range, fire control, and direction increased the capabilities of defense against air power, regardless of the speed of the aerial vehicles. The complexities of the problem were increased by controversial attitudes on the type and method of close air support and the necessity for an instantaneous and almost infallible system of command control if air superiority and isolation of the battlefield—an enormous area were nuclear warfare contemplated—could be attained.

Nevertheless, by the end of the period, largely as a result of experimentation in Korea and Vietnam, the United States had developed a variety of techniques of close air support for ground troops involving what was probably the most sophisticated system of interservice teamwork in the history of warfare. Most of this support was provided by the Air Force's Tactical Air Command; some was given by the Army's organic helicopter gunships; and some very effective support came from Navy carrier aircraft. The ability of American aircraft to provide such support, however, had been clearly inhibited in Vietnam by Soviet-made surface-to-air missiles (SAMs) and multiple-barrel, light, automatic AAA guns. The potential of these antiaircraft weapons was further demonstrated by their effective use by Egyptians and Syrians against the Israeli Air Force in the Fourth Arab-Israeli War.

There did not appear to be any ground weapon capable of offsetting the tremendous advantage accruing to an interservice team which possessed air superiority.

Major Wars

The period was marked by 5 major, long-lasting confrontations, of which the most important was the "Cold War" of the superpowers, in which overt hostilities never took place, despite a number of crises and mobilizations. Of these near-conflict situations, the most important were the Berlin crises of 1948 and 1961 (see pp. 1378, 1379), the Cuban Missile Crisis (see p. 1453), and the 1973 October War alert (see p. 1353).

All 4 of the more traditional major "hot" shooting wars took place in Asia. Of these, probably

the most important was the Chinese Civil War (see p. 1423). The other 3 major shooting wars—the Indo-China War, the Arab-Israeli Conflict, and the Korean War—are discussed in some detail below.

The 1967 Arab-Israeli War (and to a lesser extent the 1956 war) provides a classic example of **Preemptive War** or **Preventive War** in which one side (in this case Israel), having decided a potential enemy is planning to go to war, and that conflict is virtually inevitable, decides to seize the initiative by starting the war at the time and place of its own choosing.

THE INDO-CHINA WAR, 1945–1975

Background

Future historians may refer to the conflict which raged throughout Indo-China from 1945 to 1975 as the **Second Thirty Years' War.*** Although the principal operations took place in Vietnam, both Laos and Cambodia were also extensively involved in conflicts distinct from, yet closely connected with, the fighting in Vietnam. The principal conflict had dragged on, with fluctuating intensity, as a bitter, sanguinary, but basically localized colonial war and civil war when the United States was drawn in as an active participant in 1965.

While the pattern was slightly different in Laos and Cambodia, the confused conflict can be considered as having 4 main periods: **the French Period** (1945–1954), **the Geneva Period** (1954–1965), **the United States Period** (1965–1973), and **the Cease-Fire Period** (1973–1975). Of these, the first 2 and the last were essentially local, internal conflicts, and are dealt with later in the Southeast Asia region under Vietnam, Laos, and Cambodia (see p. 1412). The third period, a major international war, directly involving 1 of the 2 superpowers, is discussed below.

THE UNITED STATES WAR IN VIETNAM, 1965–1973

January 1965 was a period of intense Communist activity throughout South Vietnam. Viet Cong and North Vietnamese forces launched assaults on cities, towns, and military bases along the length of the country, causing massive casualties among the South Vietnamese troops and temporarily cutting South Vietnam in two by means of a push eastward to the sea from the central highlands. In early February Viet Cong forces attacked a U.S. installation and helicopter base in the central highlands, and on February 8 President Johnson ordered South Vietnamese and U.S. Air Force and U.S. Navy carrier planes to begin a systematic bombardment of carefully selected military targets north of the demilitarized zone (DMZ), which divided North from South Vietnam. On March 8, the U.S. 9th Marine Brigade landed at Danang, second-largest city in South Vietnam, situated 70 miles south of the DMZ on the Tonkin Gulf, and went into immediate action to repulse Communist forces attacking U.S. military assistance installations.

* As a possible minor historical footnote, the first known public reference to "thirty years' war" was that of Eric Sevareid, on a CBS news broadcast on April 22, 1975.

South Vietnam in Southeast Asia

Thus began the pyramiding of American forces pitted against the North Vietnamese and Viet Cong, both supplied by Communist China and the U.S.S.R. (independently and without coordination). The U.S. had entered into the longest, oddest, and by far the most unpopular war in its history. It was a war without a fixed front; the enemy was here, there, and everywhere. The hostile military effort was led by General Vo Nguyen Giap, leader of the Viet units in the earlier successful rebellion against the French; he had made the operations of guerrilla warfare a science. American ground forces held only the soil on which they stood in a war of thousands of savage engagements without a single major battle in the conventional modern sense. The Vietnam war, a phantasmagoria of brutal combat, political and social entanglements, and unceasing frustration, could be viewed on television in American homes; military personnel flew to the area in commercial aircraft; and the military effort was heavily influenced by political considerations in Washington and the frequently overoptimistic views of the Department of Defense, as well as by the State Department, USIA, AID, CIA, and other civilian agencies present in the embattled South Vietnam.

Despite the rapid commitment of some 7 additional U.S. ground battalions and an air squadron, and the commencement of raids on Communist bases in South Vietnam by U.S. B-52 bombers, by mid-1965 the military situation showed no improvement, and President Johnson decided that only a massive infusion of American combat troops could prevent the defeat of the Army of the Republic of Vietnam (ARVN).

The U.S. troops operated from fortified bases, carrying out search-and-destroy missions designed to eliminate Communist forces and base areas rather than capture and hold blocks of territory. Combat, except in sieges, consisted of clashes at platoon to no more than battalion strength, even in the occasional large-scale operations. The ubiquitous helicopter—gunship, personnel and cargo carrier, vehicle of rescue and evacuation of wounded—furnished amazing flexibility to the U.S. and allied troops.

In mid-1966 the U.S. forces launched their first prolonged offensive with the goals of locating and destroying major Communist units and bases. The offensive differed from earlier search-and-destroy missions in that it comprised lengthy and continuous sweeps rather than short, swift raids. Operations were carried out in the central highlands and in the provinces around Saigon. But when they were hard pressed, the Communists, relying on their knowledge of the terrain, were generally able to break contact and disappear into the jungle. When the allied sweeps receded, the Communist forces generally moved back into the territory they had held before.

Despite the execution of 2 massive operations in 1967, "Cedar Falls" and "Junction City," and the completion of the first U.S. base in the Mekong Delta, Communist forces were able to regroup and continue their operations against U.S. bases along the Laotian and Cambodian borders and south of the DMZ. These operations quickly gathered strength and momentum and climaxed in the Tet Offensive of early 1968.

This Communist offensive followed closely on the heels of well-publicized optimistic reports from field commanders; its size, scope, and fury shocked the American public and resulted in demands by many Americans for a U.S. withdrawal from Vietnam. Thus, although the Tet Offensive was a tactical military defeat for the Communists (since they suffered severe casualties and gained neither any substantial new territorial footholds nor increased support among the South Vietnamese), it was a major strategic victory for the North Vietnamese and Viet Cong.

Following the 1968 Communist offensive, General **William Westmoreland** stepped down as Commander, United States Military Assistance Command, Vietnam (USMACV), and returned to the United States to become U.S. Army Chief of Staff. General Creighton W. Abrams succeeded him in Vietnam. To exploit heavy Communist losses sustained in the recent offensive and in U.S. operations in the A Shau Valley, and to enhance improved ARVN combat capability, General Abrams undertook a "Vietnamization" program involving the supply of all South Vietnamese units with modern weapons and equipment, which would allow American forces to shift the bulk of the combat burden in the defense of their country to the South Vietnamese.

By 1969 the U.S. military presence in Vietnam had grown to the colossal strength of 543,482, supported by the Navy's Seventh Fleet in the Tonkin Gulf, and strategic aircraft flying from bases in Guam and Thailand. Harbors, roads, airfields, cantonments, and warehouses sprang up to supply the needs of more than 1 million men. Other SEATO nations had joined the U.S.-South Vietnam alliance, and when American ground forces in South Vietnam were approaching their peak, troops furnished by Australia, New Zealand, South Korea, Thailand, and the Philipines totalled some 62,000 men, while an Australian cruiser had joined the Seventh Fleet's Tonkin Gulf patrol. (These allies would sustain 8,500 casualties including 2,500 men killed in action.) Noncombatant elements came too from West Germany, Taiwan, and Malaysia. The U.S. furnished logistical support for all allied forces.

Concurrently, an enormous black market developed; South Vietnamese in collusion with corrupt members of the U.S. Armed Forces robbed commissaries, munitions dumps, and post exchanges. Drug traffic boomed, red-light ghettos thrived, venereal rates by 1972 soared to nearly 700 per thousand men. Disillusion with the war grew in the U.S., yet the war dragged on.

In a major effort to shorten the war and destroy large Communist supply bases in Cambodia, President Nixon ordered U.S. forces to move into the "Parrot's Beak" and "Fishhook" areas of Cambodia on April 30, 1970, in conjunction with an operation under execution by South Vietnamese troops. Although vast amounts of equipment were seized in the 2-month incursion, supplies continued to reach Communist forces in South Vietnam via the Ho Chi Minh Trail, which ran through Laos.

Antiwar sentiment in the U.S. skyrocketed as a result of this "invasion" of Cambodia. The U.S. government was never successful in justifying this action as part of a widespread war, in which Cambodia had already become involved. Tens of thousands of young American men joined many others who earlier had dodged the draft, resisted induction, or deserted the ranks of the uniformed services. These protesters fled into exile in Sweden and Canada, went "underground" inside the U.S., or went to jail. The size and scope of antiwar marches, rallies, and organizations grew, drawing into their ranks increasingly diverse segments of American society, ranging from sincere patriots to cynical supporters of international Communist propaganda. Meanwhile, American POWs remained in limbo, the Communists refusing all details of their number, identity, or condition. Peace talks in Paris brought no agreement.

Although by 1972 General Abrams's U.S. and ARVN forces had virtually won the land war in South Vietnam, drastically curtailing Viet Cong and North Vietnamese operations and inflicting unacceptable casualties on their troops, the American public had almost uniformly come to see the U.S. involvement in Vietnam as a tragic mistake. Through secret negotiations conducted since 1969 between presidential advisor **Henry Kissinger** and North Vietnamese envoy **Le**

Duc Tho, a peace agreement was signed on January 27, 1973, allowing for the release of U.S. POWs and the withdrawal of all U.S. forces from Vietnam. On March 29, 1973, the last American soldier left South Vietnam.

Included below are a few of the most important actions of the innumerable offensives, counteroffensives, and engagements of this war. See also the Statistical Summary (p. 1333).

Operations, 1965

1965, February 7. Viet Cong Attack U.S. Support Installations near Pleiku Air Base. President Johnson considered this a deliberately hostile act. North Vietnam having ignored U.S. warnings to cease its direct assistance to, and control of, the Viet Cong in their insurgency against the legal government of South Vietnam, and having instituted or sponsored a campaign of terrorism and murder against American advisors in South Vietnam, he ordered retaliation against North Vietnam. He also ordered that U.S. dependents be evacuated from South Vietnam.

1965, February 8. U.S. Air War Begins against North Vietnam. U.S. air units, in cooperation with South Vietnamese air forces, carried out joint retaliatory air attacks on bases at Dong Hoi on the coast just north of the Demilitarized Zone (DMZ). This began a systematic but limited offensive against carefully selected military targets in North Vietnam. In response, the Viet Cong intensified its terrorism and sabotage against U.S. installations and personnel.

1965, March 8. First U.S. Ground Combat Force in Vietnam. The 9th Marine Expeditionary Brigade landed at Danang, Quang Nam Province, in the northern coastal area.

1965, May 14. USMACV Authorizes Naval Gunfire Support.

1965, June 28. First Major U.S. Operation. The 173rd Airborne Brigade (arrived South Vietnam May 5) lifted 2 ARVN battalions and 2 battalions of the 503rd Infantry Brigade into battle in Bien Hoa Province, 20 miles northeast of Saigon.

1965, August 18–21. Operation "Star-light." This was the first important victory for U.S. forces. Over 5,000 Marines moved against the Viet Cong 1st Regiment south of Chu Lai, Quang Ngai Province, in the northern coastal region, trapping a large force of Viet Cong and destroying a major stronghold near **Van Tuong,** just south of Chu Lai.

1965, October 23–November 20. Battle of the Ia Drang Valley. The 1st Cavalry Division (Airmobile) defeated North Vietnamese forces which had gathered in western Pleiku Province in the central highlands with the goal of cutting South Vietnam in half. Both sides suffered heavy casualties.

1965, December 15. First U.S. Air Raid on a Major North Vietnamese Industrial Target. This was a thermal power plant at Uongbi, 14 miles north of Haiphong.

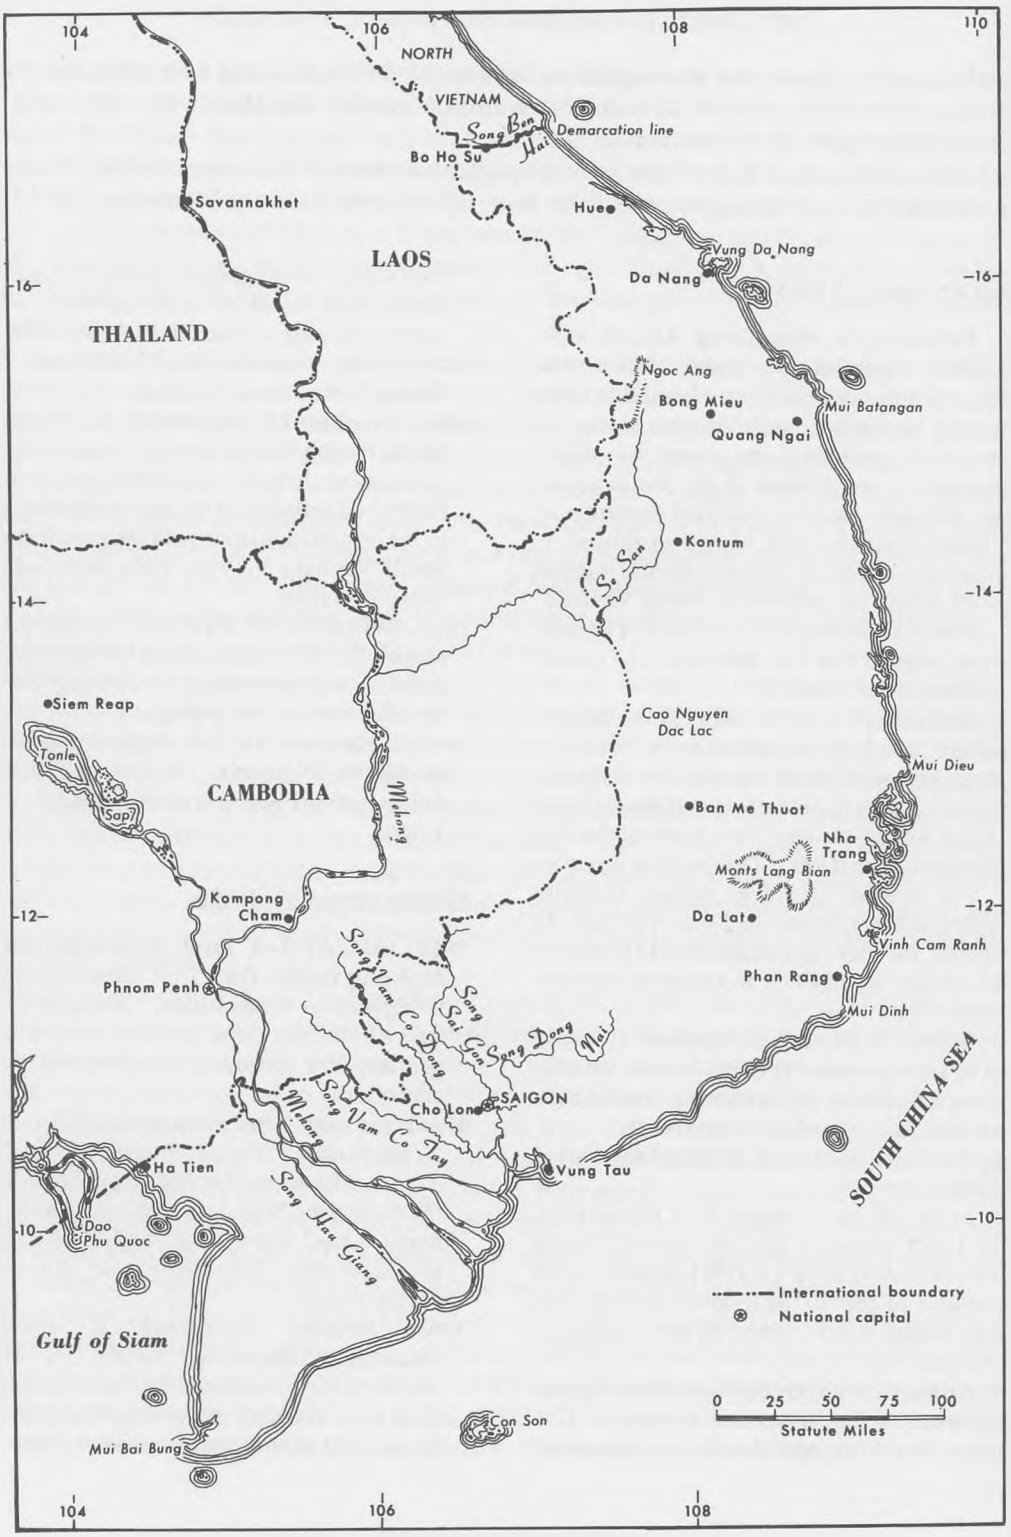
1965, December 31. U.S. Military Strength in South Vietnam: 154,000; U.S. combat deaths in Southeast Asia since January 1, 1961: 1,636.

Operations, 1966

1966, January 1–8. First American Unit in Mekong Delta. The 173rd Airborne Brigade, in Operation **"Marauder,"** successfully destroyed one Viet Cong battalion and the headquarters of a second in the **Plain of Reeds** area.

1966, January 19–February 21. Operation "Van Buren." The 1st Brigade of the 101st Airborne Division, the 2nd Republic of Korea (ROK) Marine Brigade, and the 4th ARVN Regiment carried out a search-and-destroy action to secure Phu Yen Province in the central coastal region.

1966, January 24–March 6. Operation **"Masher-White Wing."** 20,000 U.S., ARVN, and ROK forces conducted a massive sweep of Binh Dinh Province in the central coastal area. Search-and-destroy missions were carried out



South Vietnam

against 2 Viet Cong and 2 North Vietnamese regiments before allied units linked up with U.S. Marine forces moving north from Phu Yen Province.

1966, March–October. U.S. Marines Constantly Engaged in Northern Provinces.

1966, April 12. First Involvement of B-52s Based on Guam. Strikes were carried out against North Vietnamese infiltration routes at the Mugia Pass near the North Vietnam-Laos border.

1966, May 1. First U.S. Combat Operation against Cambodian Territory. U.S. 1st Infantry Division shelled targets on the Cambodian bank of the Caibac River after American troops on the South Vietnam bank came under Communist fire from the Cambodian shore.

1966, May. Beginning of Operation "Game Warden." Naval force of air, sea, and ground units began coastal patrols and inshore surveillance to prevent Viet Cong infiltration into the Mekong Delta.

1966. May–August Operations in Central Highlands. To prevent infiltration from North Vietnam and Cambodia, U.S. 25th Infantry Division, 1st Cavalry Division (Airmobile) and ARVN forces carried out operations in Pleiku Province, while the 101st Airborne Division was heavily engaged in Kontum Province.

1966, June–July. Operations of U.S. 1st Division in Binh Long Province. The American troops were operating with the 5th ARVN Division about 70 miles north of Saigon.

1966, June 29. First U.S. Air Attacks near Hanoi and Haiphong. These were against oil installations.

1966, July. U.S. Aircraft Strike North Vietnamese Positions inside DMZ. The International Control Commission (ICC) said it would act to keep the zone free.

1966, August 3–1967. January 31. Operation "Prairie." The 3rd Marine Division was continuously engaged in the Con Thien-Gio Linh areas near the DMZ.

1966, August 26–1968. February 20. U.S. 1st Cavalry Division in the Central Coastal Region. It conducted a continuous series of one-battalion leap-frogging search-and-destroy operations in Binh Thuan and Binh Dinh provinces.

1966. September 14–November 24. Operation "Attleboro." About 22,000 U.S. troops engaged Viet Cong and North Vietnamese forces in a series of small engagements in Tav Ninh Province next to the Cambodian border northwest of Saigon, with the goal of breaking up a planned Communist offensive. This was the largest U.S. operation to date.

1966, October 18–December 30. Operations in Central Highlands. The 4th Infantry Division and elements of the 25th Infantry and 1st Cavalry divisions continued operations in Pleiku Province to prevent infiltration.

1966, November 30–1967, December 14. Operations in and around Saigon. One battalion each from the 1st, 4th, and 25th Infantry divisions were engaged incessantly with Viet Cong forces November–December 1966). These units were replaced by the 199th Light Infantry Brigade and ARVN troops, who secured the area in less intensive combat (1967).

1966, December 31. U.S. Military Strength in South Vietnam: 389,000; U.S. combat deaths in Southeast Asia in 1966; 4,771.

Operations, 1967

1967, January 6. U.S. Troops Committed to Mekong Delta. Marines landed in Dinh Tuong Province and with the 9th Infantry Division established a base and carried out operations in Long An Province.

1967, January 8–26. Operation "Cedar Falls." The 1st and 25th Infantry divisions, 173rd Airborne Brigade, 11th Armored Cavalry Regiment, and ARVN forces operated against the Viet Cong regional military headquarters and major Communist base areas in the "Iron Triangle," some 25 miles northwest of Saigon.

1967, February–September. Marine Operations in the North. While the 3rd Marine Division continued operations along the DMZ, the 1st Marine Division was operating in Quang Nam and Quang Tin provinces.

1967, February 22–May 14. Operation "Junction City." In the largest operation of the war to date, 22 U.S. battalions and 4 ARVN battalions moved against Viet Cong and North Vietnamese forces in Tay Ninh and neighboring provinces north of Saigon along the Cambodian border.

1967, February 24. First U.S. Artillery Fire on North Vietnam. Marine gunners shelled antiaircraft positions in the DMZ and North Vietnam.

1967, February 27. U.S. Aircraft Drop First Mines in North Vietnam Rivers.

1967, March 22. Thailand Agrees to Use of U-Tapao Airfield as B-52 Base. The first B-52s arrived in Thailand April 10.

1967, May 3. 3rd Marine Division Seizes High Ground near Khe Sanh. This provided a dominating position over infiltration routes from Laos into the northernmost province of Quang Tri.

1967, May 14–December 7. 25th Infantry Division West of Saigon. Search-and-destroy operations were carried out in Hua Nghia Province.

1967, August–September. Seige of Con Thieu. Marines repelled Viet Cong efforts against a major base in Quang Tri Province near the DMZ.

1967, November 1–1968, March 31. Operations around Khe Sanh. The U.S. 3rd Marine Division probed enemy concentrations along the DMZ in western Quang Tri Province.

1967, November 11–1968, June 10. Americal Division Reinforces Marines in North. This involved search-and-destroy missions in South Vietnam's 5 northern provinces.

1967, December 8–18. U.S. 101st Airborne Division Undertakes Longest and Largest Airlift to Date. 10,024 men and more than 5,300 tons of equipment were carried in 369 C-141 Starfighters and 22 C-133 Cargomasters from Fort Campbell, Kentucky, directly into combat in Vietnam.

1967, December 31. U.S. Military Strength in South Vietnam: 480,000; U.S. combat deaths in Southeast Asia in 1967; 9,699.

Operations, 1968

1968, January 21–April 8. Seige of Khe Sanh. About 5,000 U.S. Marines were isolated in **Khe Sanh,** Quang Tri Province (northern sector) by some 20,000 Communist troops (see Operation "Pegasus," below).

1968, January 30–February 29. Communist Tet Offensive. Breaking the Tet holiday truce, an estimated 50,000 Viet Cong and North Vietnamese soldiers launched well-planned and simultaneous attacks on allied bases and major South Vietnamese cities and towns. **Saigon** and **Hue** were the principal targets of the Communist assault. Fighting went on block by block inside the city of Hue until February 25, and in Saigon combat reached inside the American Embassy grounds. All of the assaults were repelled, and fighting subsided in late February with the exception of combat around the U.S. Marine base at Khe Sanh, which remained under siege. Although the offensive was militarily unsuccessful, it was a psychological victory since the American and South Vietnamese forces were taken completely by surprise.

1968, February 24. Air Attack on Hanoi. Aircraft from the carrier USS *Enterprise* struck at the port area.

1968, March 16. My Lai (Song My) Massacre. During a search-and-destroy operation by a task force of the U.S. 23rd (Americal) Infantry Division, C Company, 20th U.S. Infantry, some 200 unarmed civilians—men, women, and children—were murdered in the village of My Lai 4 in Quang Ngai Province (northern sector). This outrage remained unpublicized for more than a year, and when it was disclosed it shocked the Free World and exacerbated anti-war sentiments in the United States.

1968, March 31. Cessation of Bombing of North Vietnam. President Johnson's announcement was a signal that the United States was seeking a negotiated solution.

1968, April 1–15. Operation "Pegasus." A force of 30,000 U.S. and ARVN soldiers, mainly from the 1st Cavalry Division (Airmobile), attacked to free the Marines besieged at Khe

Sanh. The North Vietnamese had already begun to withdraw into Laos.

1968, April 8. Operation "Complete Victory." Over 100,000 men from 42 U.S. and 37 ARVN battalions undertook an offensive against Communist forces in 11 provinces around Saigon.

1968, April 19–May 17. Operation "Delaware." An offensive was launched into Communist base areas in A Shau Valley, Quang Tri and Thua Thien provinces (northern sector), by 1st Cavalry Division (Airmobile), 101st Airborne Division, elements of the 196th Light Infantry Brigade, 1st ARVN Division, and ARVN Task Force Bravo (Airborne), designed to prevent an expected attack against Hue.

1968, April. Mobile Riverine Force Begins Operations. Activities took place along inland waterways of Mekong Delta.

1968, May 5–9. Communist Spring Offensive. Attacks were launched on 122 military installations, airfields, and towns throughout South Vietnam, including Saigon. The attacks were unsuccessful.

1968, May 10. Paris Peace Talks Begin. U.S. and North Vietnamese officials began discussions.

1968, May 19–June 21. Nightly Rocket Attacks against Saigon. More than 100,000 civilians were left homeless within the city.

1968, July 3. General Creighton W. Abrams Assumes Command. He replaced General William Westmoreland (who became Army Chief of Staff) as Commander of USMACV.

1968, July 14–18. Intensified B-52 Operations. They struck supply bases and troop concentrations 15 miles north of the DMZ (July 14) and North Vietnamese SAM sites for the first time (July 18).

1968, August 17. Third Communist Offensive. This was mounted throughout South Vietnam except the Delta; rocket attacks on Saigon resumed August 21.

1968, September 30. U.S.S. *New Jersey* Begins Combat Operations near DMZ. This was the first combat use of a U.S. battleship since July 1953.

1968, October 18. Operation "Sea Lords." This was launched by three U.S. naval task forces to interdict Viet Cong infiltration routes from Cambodia into the Mekong Delta and coordinate naval operations in the Delta.

1968, October 31. U.S. Ceases Attacks on North Vietnam. President Johnson ordered complete cessation of air, naval, and ground bombardment north of the DMZ, effective at 0800 EST November 1, in an effort to encourage peace negotiations.

1968, December 31. U.S. Military Strength in South Vietnam: 536,040; U.S. combat deaths in Southeast Asia in 1968: 14,437.

Operations, 1969

1969, January 25. First Substantive Peace Talks in Paris.

1969, February 6. American-Vietnamese Staff Organized to Facilitate "Vietnamization." The combined U.S.-Republic of Vietnam Armed Forces (RVNAF) Joint General Staff was to facilitate increasing Vietnamese responsibility for operations and to improve and modernize the RVNAF.

1969, February 23–March 29. Communist Offensive. This began with a series of rocket and mortar attacks against over 100 cities and bases throughout South Vietnam, including Saigon; attacks peaked on February 26 and March 6 and 16.

1969, April 24. Intensive B-52 Raids. Some 100 B-52s dropped bombs on targets northwest of Saigon near the Cambodian border.

1969, April 26. First "Vietnamization" Transfer. The 6th Battalion 77th Field Artillery completed turnover of equipment to the 213th ARVN artillery Battalion in ceremonies at Can Tho, Phong Dinh Province, in the Mekong Delta.

1969, April 30. Peak U.S. Troops Strength in South Vietnam: 543,482. (See Statistical Summary for additional forces in Thailand and at sea.)

1969, May 8–20. Battle of "Hamburger Hill." As part of an operation against North Vietnamese infiltration routes, U.S. troops took Hill

937 (Ap Bia Mountain or "Hamburger Hill") in the northern A Shau-Valley, Quang Tri Province, after fierce fighting and 10 attempts.

1969, May 11–14. Communist Summer Offensive. This began with coordinated ground attacks throughout South Vietnam.

1969, May 14. President Nixon Announces Planned Withdrawal from Vietnam.

1969, June 5. U.S. Aircraft Resume Bombardment of North Vietnam. Strikes on North Vietnamese targets were the first since the November 1968 bombing halt.

1969, June 17. Communists Retake "Hamburger Hill."

1969, July 8. U.S. Withdrawal Begins. The 3rd Battalion, 60th Infantry Brigade, 9th Infantry Division, left Tan Son Nhut Air Base near Saigon for Fort Lewis, Washington.

1969, July 25. U.S. Bombing Authorized in Laos. Prime Minister **Souvanna Phouma** announced that he had authorized U.S. bombing along the Ho Chi Minh Trail.

1969, September 3. Ho Chi Minh Dies in Hanoi.

1969, October 1. Vietnamese Forces Assume Responsibility for Saigon Area Defense.

1969, December 28. Peers in Vietnam. Lieutenant General **William R. Peers** arrived to lead the investigation into the My Lai massacre (see p. 1328).

1969, December 31. U.S. Military Strength in South Vietnam: 484,326; U.S. combat deaths in Southeast Asia in 1969: 6,727.

Operations, 1970

1970, January 20. United States Protests Execution of Two U.S. POWs. The U.S. government requested the International Red Cross to investigate the incident, which had occurred on September 30, 1966. The grave of the two soldiers was discovered by Marines (January 17) in Thua Thien Province (northern sector).

1970, January 26. POW Record. Lieutenant **Everett Alvarez, Jr., U.S.N.,** spent his 2,000th day in captivity, marking the longest time any American had spent as a prisoner of war.

1970, February 11. Partial Withdrawal from Thailand. Some 4,200 troops withdrew; 43,800 remained.

1970, February–March. U.S.-ARVN Offensive against Communist Supply Depots near Cambodian Border. Major caches were discovered. During this operation, U.S. troops entered Laos to establish an artillery base and mine the Ho Chi Minh Trail.

1970, March 14. U.S. Ammunition Ship Hijacked. USS *Columbia Eagle,* en route to Thailand, was hijacked by 2 multineers and taken to Cambodia; the ship was later released by the Cambodian government.

1970, April 1. Communist Spring Offensive. Viet Cong and North Vietnamese forces attacked more than 130 military bases and towns throughout South Vietnam. After 3 days the force of the assault diminished as the Communist troops encountered supply difficulties.

1970, April 19, U.S. Operations in Laos Acknowledged. A Senate subcommittee released official acknowledgment that U.S. forces had been indirectly involved in conflict in Laos, with 100 American civilians and military personnel killed there since 1962; since 1966 U.S. forces had served as air spotters in Laotian bombers.

1970, April 30–June 30. U.S. Troops Enter Cambodia. President Nixon announced that U.S. troops had begun a ground offensive against Communist bases in Cambodia; the U.S. 1st Cavalry Division and the ARVN Airborne Division, totaling more than 40,000 troops, launched the operation in the "Fish Hook" and "Parrot's Beak" areas immediately across the Vietnamese border in Cambodia. President Nixon later (May 5) announced that U.S. troops would penetrate no more than 21.7 miles into Cambodia and that all U.S. forces would be withdrawn from Cambodia by June 30.

1970, May 1–2. Intensified U.S. Air Raids. These were the largest north of the DMZ since the November 1968 bombing halt.

1970, June 1–7. Fierce Fighting Breaks Out along DMZ. Communist forces began a continuous and concentrated shelling of the U.S. base at **Danang,** Quang Nam Province (northern coastal sector).

1970, June 30. U.S. Troops Withdrawn from Cambodia. The U.S. Command reported capture of 155 tons of weapons, 1,786 tons of ammunition, and 6,877 tons of rice. U.S. forces lost 388 killed and 1,525 wounded; enemy dead were estimated at 4,766.

1970, August 1. U.S. Close Air Support for Cambodians Reported. U.S. air attacks reportedly enabled the Cambodians to free **Kampong Thom** in central Cambodia and the village of Skoun, a suburb of Phnom Penh.

1970, September. Daily B-52 Raids along Laotian Border. This was to prevent further Communist troop build-ups and to disperse the estimated 40,000 troops already gathered and poised for an offensive.

1970, November 21. Son Tay Raid. In an attempt to rescue U.S. POWs, a specially trained volunteer commando force carried out a helicopter raid on the Son Tay POW camp in North Vietnam, 23 miles from Hanoi; however, the camp was found abandoned.

1970, December 31. U.S. Military Strength in South Vietnam: 335,794; U.S. combat deaths in Southeast Asia in 1970: 7,171.

Operations, 1971

1971, January 12. Vietnamese Navy Convoys Supply Vessels for Cambodia River. This was the beginning of escorting merchant ships carrying fuel and ammunition to Phnom Penh.

1971, January 30. Operation "Dewey Canyon II." This operation by U.S. forces, just south of the DMZ, was to secure that area and establish lines of communication to support a planned South Vietnamese thrust into Laos.

1971, February 3. Renewed South Vietnamese Offensive in Cambodia. USMACV announced that it was providing full air support for the offensive into the Fish Hook and Parrot's Beak areas of Cambodia.

1971, February 8–April 9. South Vietnamese Operation "Lam Son 719" in Laos. This had the objective of disrupting North Vietnamese logistics along the Ho Chi Minh Trail. The U.S. Command in Vietnam announced that no U.S. ground forces or advisors would enter Laos. The South Vietnamese 1st Infantry Division and 1st Armored Brigade seized **Tchepone,** Laos (directly west of Quang Tri City), the main objective of their operation and the primary supply center for forces coming down the Ho Chi Minh Trail (March 6). Preliminary reports at the conclusion of the action on April 9 listed 13,462 Communists killed and 56 captured; 5,066 individual and 1,935 crew-served weapons, 106 tanks, 422 trucks, and 1,250 tons of rice were captured. Friendly losses were listed as 1,707 (176 U.S.) killed, 6,466 (1,042 U.S.) wounded, and 693 (42 U.S.) missing.

1971, July 9. Northern Province Defense Responsibility to Vietnamese Forces. The turnover of "Fire Base Charlie 2," 4 miles south of the DMZ, marked the completion of the transfer of the defense responsibility for that area by U.S. forces.

1971, August 11. All Ground Combat Responsibility Turned Over to South Vietnamese. Defense Secretary **Melvin Laird** announced the completion of the first phase of the Vietnamization program.

1971, December 26–31. U.S. Fighter-Bombers Attack North Vietnamese Targets. Airfields, missile sites, antiaircraft batteries, and supply depots were struck in retaliation for Communist attacks on Saigon, DMZ violations, and attacks on unarmed U.S. reconnaissance planes.

1971, December 31. U.S. Military Strength in South Vietnam: 158,119; U.S. combat deaths in Southeast Asia in 1971: 942.

Operations, 1972

1972, March 30. Communist Easter Offensive. In the biggest offensive since the 1968 Tet campaign, some 20,000 North Vietnamese forces launched a 4-pronged attack into South Vietnam across the DMZ with the goal of taking **Quang Tri City,** capital of South Vietnam's northernmost province, and driving the South Vietnamese 3rd Division from 15 border

outposts. In retaliation U.S. aircraft and naval forces began bombing military supply facilities near Hanoi and Haiphong. Some 50,000 Communist troops, poised along the Cambodian and Laotian borders, drove into Binh Long Province north of Saigon (April 5), taking Loc Ninh (April 7) and securing half of **An Loc,** the provincial capital (April 13). In the central coastal region Communist forces attacked Binh Dinh Province in an effort to cut the country in two (April 18). Four North Vietnamese divisions attacked in the central highlands in Kontum Province (April 22), taking **Dak To** (April 24) and encircling the provincial capital of **Kontum** (April 29).

1972, April 7. Relief of U.S. Air Commander in Vietnam Announced. General **John Lavelle** was removed as Commander of the U.S. Seventh Air Force in Vietnam in March, retired, and demoted to lieutenant general when it was revealed that he had ordered some 20 unauthorized air strikes against North Vietnamese targets between November 1971 and March 1972.

1972, April 26–May 1. Battle of Quang Tri City. The city fell to North Vietnamese forces as the ARVN 3rd Division retreated to Hue. Heavy fighting continued elsewhere, particularly at An Loc and Kontum.

1972, May 8. President Nixon Orders Mining of North Vietnamese Harbors. Haiphong harbor and the harbors of 6 other North Vietnamese ports were to be mined and all land and sea routes interdicted.

1972, June 28. Appointment of General Frederick C. Weyand to Commander U.S. Forces in Vietnam. He replaced General Creighton W. Abrams.

1972, June 28–September 15. Second Battle of Quang Tri City. South Vietnamese attacked with 20,000 troops and the heaviest concentration of U.S. air support of the war; by July 26 U.S. and South Vietnamese Air Forces had flown more than 10,000 missions against North Vietnamese forces in support of the ARVN ground action; after Quang Tri City was retaken (September 15) fighting continued elsewhere in the province.

1972, July 19. South Vietnamese Binh Dinh Province Counteroffensive Begins. This was an effort to regain territory lost in the central coastal region during the Communist spring offensive.

1972, July 28. United States Admits Damage to North Vietnamese Dike System. A U.S. government report admitted U.S. bombing damage at 12 locations but maintained that the attacks were on military targets and dike damage had been unintentional.

1972, August 12. End of U.S. Ground Combat Role. This resulted from the withdrawal of the 3rd Battalion, 21st Infantry, from Danang.

1972, October 26. Kissinger Announces That "Peace Is at Hand." In a public report of his secret negotiations with the North Vietnamese, Kissinger said that final agreement could be worked out in one more conference.

1972, October 27. Temporary Halt in U.S. Bombing of North Vietnam above 20th Parallel. In recognition of North Vietnamese concessions in the secret negotiations, a bombing halt took effect at 1700 on October 23. (Bombing was continuing in North Vietnam below the 20th parallel, however.)

1972, October 30. U.S. Halts Naval Bombardment North of 20th Parallel. Simultaneously the U.S. stepped up shipment of war materiel to South Vietnam.

1972, December 18. Massive U.S. Air Attack Begins. Since no agreement had been reached, the U.S. resumed bombing strikes against Hanoi and Haiphong; North Vietnamese harbors were also mined. The Pentagon insisted that hits on hospitals and other civilian targets were unintended.

1972, December 30. Renewed Bombing Halt North of the 20th Parallel. This was as a result of North Vietnamese willingness for renewed peace talks.

1972, December 31. U.S. Military Strength in South Vietnam: 24,200; U.S. combat deaths in Southeast Asia in 1972: 531.

Operations, 1973

1973, January 8. Accidental U.S. Air Attack on Allied Air Base. USMACV acknowledged

that U.S. fighter-bombers accidentally hit the base at Danang, Quang Nam Province (northern sector), causing several casualties.

1973, January 15. President Nixon Orders Halt to All Offensive Military Action. This included air strikes, shelling, and mining operations, and reflected progress in recent peace negotiations.

1973, January 23. Cease-fire Agreement Announced. Henry Kissinger and Le Duc Tho initialed a cease-fire agreement to go into effect at 0800 (Saigon time) on January 28. The final agreement was signed at ceremonies in Paris (January 27). Agreement provided for the release of all American POWs, the withdrawal of all remaining U.S. troops, and the establishment of an international force to supervise the truce.

1973, January 27. Defense Secretary Melvin Laird Announces End of Military Draft. He cited the Vietnam cease-fire agreement and the lack of further need for inductions as the reasons behind the decision.

1973, February 12. North Vietnam Releases First U.S. Prisoners. Starting Operation "Homecoming," 142 U.S. POWs were flown to Clark Air Force Base in the Philippines, then to Travis Air Force Base in California.

1973, February 21. Cease-Fire in Laos. The Laotian government and Communist-led Pathet Lao announced a cease-fire agreement to take effect at 1200 (Vientiane time) February 22, thereby ending 20 years of war. The U.S. immediately called on the Pathet Lao to release U.S. prisoners. On February 23 U.S. B-52s raided Communist positions in Laos at the request of the Royal Laotian Army.

1973, March 27. War Continues in Cambodia. The White House announced that the U.S. would continue to bomb in Cambodia until Communist forces suspended military operations and agree to a cease-fire.

1973, March 29. Last American Troops Leave Vietnam. Simultaneously North Vietnam released the last 67 U.S. prisoners, bringing the total number of prisoners released to 587. Only 8,500 U.S. civilian technicians remain in Vietnam.

1973, April 16–17. U.S. Air Strikes in Laos. U.S. B-52s and F-111s hit Communist positions at Tha Vieng at the southern end of the Plain of Jars in Laos.

1973, June 13. Supplementary Cease-Fire Agreement.

1973, August 14. U.S. Ceases Bombing in Cambodia. This was in compliance with a June Congressional decision. It officially ended more than 9 years of U.S. air combat activity in Indochina.

Statistical Summary: United States War in Vietnam, 1965–1973

	Total U.S. Forces Worldwide	*Maximum Deployed Strength*	*Total Combat Casualties*	*Killed and Died of Wounds*	*Wounded*	*Prisoners or Missing*	*Non-Battle Deaths*
Total	3,300,000	625,866 (3/27/69)	205,023	46,226	153,311	5,486	10,326

THE ARAB-ISRAELI WARS

Background

The roots of the conflict which has engulfed the Middle East for most of the period since World War II include the Diaspora of the Jews after the Roman subjugation of rebellious Palestine in the 1st century A.D., the Crusaders' conquest of Jerusalem in 1099, the Zionist movement beginning late in the 19th century, the Balfour Declaration of 1917, the Allies' denial of Arab expectations in the Versailles Treaty, and the Nazi efforts to exterminate the Jews of Europe during World War II. It is beyond the scope of this text to evaluate conflicting interpretations of these emotion-charged events, or to assess responsibility for the conflict. Both the Jewish Israelis and their Arab opponents are convinced of the religious, moral, and legal righteousness of their thus far irreconcilable causes. The military historian can only seek to illuminate what happened, and how it happened, rather than why it happened.

The years since 1945 have been marked by 8 distinct periods of hostility: (1) guerrilla warfare sparked by Jewish terrorism, 1945–1948; (2) the First Arab-Israeli War, or Israeli War of Independence, 1948–1949; (3) the Second Arab-Israeli or Sinai-Suez War, 1956; (4) the Third Arab-Israeli War or Six-Day War, 1967; (5) the War of Attrition, 1968–1970; (6) guerrilla warfare sparked largely by Arab terrorism, 1970–1973; (7) the Fourth Arab-Israeli War, or October War, 1973; and (8) strife in Lebanon (1975–1984) marked by 2 Israeli interventions in 1978 and 1982. The principal events of the 4 periods of overt or formal international hostilities (2), (3), (4), and (7), above, are covered in this section; the major events of the other 4 periods will be found in the sections on Palestine, Israel, and neighboring Arab states. For background through 1947, see p. 1392.

First Arab-Israeli War, or Israel's War for Independence May 14, 1948–January 7, 1949

Despite previous debate, argument, and violence, it was not until the U.N. partition decision that the Arabs of Palestine and neighboring countries faced the reality of a Jewish state about to be established in their midst. Despite this, the Arabs did not systematically plan or organize to prevent this unacceptable occurrence. The highly organized Jewish Agency, under the leadership of **David Ben-Gurion,** prepared itself for the inevitable struggle. The Jews seized and maintained the initiative in the months of mounting violence that followed the U.N. partition decision. Early in 1948 the British government decided to withdraw from Palestine on May 14, rather than wait until October 1, the date in the U.N. plan. The Jewish population in Palestine was approximately 650,000, the Arab population approximately 1,200,000.

Preliminary Hostilities, 1948, January–May

1948, January 10. Appearance of the Arab Liberation Army (ALA). Volunteers from all the Arab world, including Palestine, under the loose and vaguely defined leadership of Iraqi General **Ismail Safwat** and Syrian leader **Fawzi Kaukji,** assembled in Syria. A raid from Syria on **Kfar Szold** by a force under Kaukji was repelled by British troops (January 10). Another raid on **Kfar Etzion** (south of Jerusalem) by Arab Palestinians (the Army of Salvation) under **Abdel Kader El-Husseini** was

more successful, but was finally halted by troops of Palmach, a small elite striking force of the Haganah, the Jewish Agency's underground army.

1948, January–April. Increasing Violence. A 3-way war spread over much of Palestine. British troops attempted to retain order, but were primarily concerned with keeping open their own evacuation routes while incurring minimum casualties. The Jews systematically, and the Arabs in considerable confusion, were jockeying for position to seize areas not garrisoned by the British, and to be ready to move into British-controlled areas after the end of the Mandate. In the north, fighting was almost continuous in and around **Haifa,** despite the effort of British Major General **Hugh Stockwell** to maintain order; the Arab population finally evacuated the city after a climactic battle (April 21–23). The Jews were also successful at **Tiberias** (April 18) and **Safad** (May 6–12). In central Palestine there was continuous fighting along the Tel Aviv-Jerusalem Road, which ran through territory controlled by Arabs, as the Jewish Agency attempted to send weapons, food, and other supplies to the 100,000 Jews in the New City of Jerusalem. In fierce fighting on the road near **Kastel,** Husseini—perhaps the most effective Palestinian Arab leader—was killed (April 9). There was also hard fighting in and around the Arab city of **Jaffa** (April 25—May 13), finally ending in a mass Arab evacuation. South of Jerusalem the Arabs maintained siege lines around 4 Jewish settlements in the Kfar Etzion area, which was finally overrun by the Arab besiegers (May 14).

1948, April 9. Massacre of Deir Yassin. During the fighting for control of the Tel Aviv-Jerusalem Road, units of 2 Jewish terrorist organizations, the Irgun Zvai Leumi and the Stern Gang, slaughtered some 254 noncombatant Arab men, women, and children. Although most Palestinian Jews were as shocked by this incident as were the Arabs, it added greatly to Arab bitterness against the Jews and Zionism.

1948, April 25. Neighboring Arab States Agree to Invade Palestine. Lebanon, Syria, Iraq, Transjordan, and Egypt began to prepare for invasion of the Jewish regions of Palestine, under nominal but ineffective over all command of King Abdullah of Transjordan.

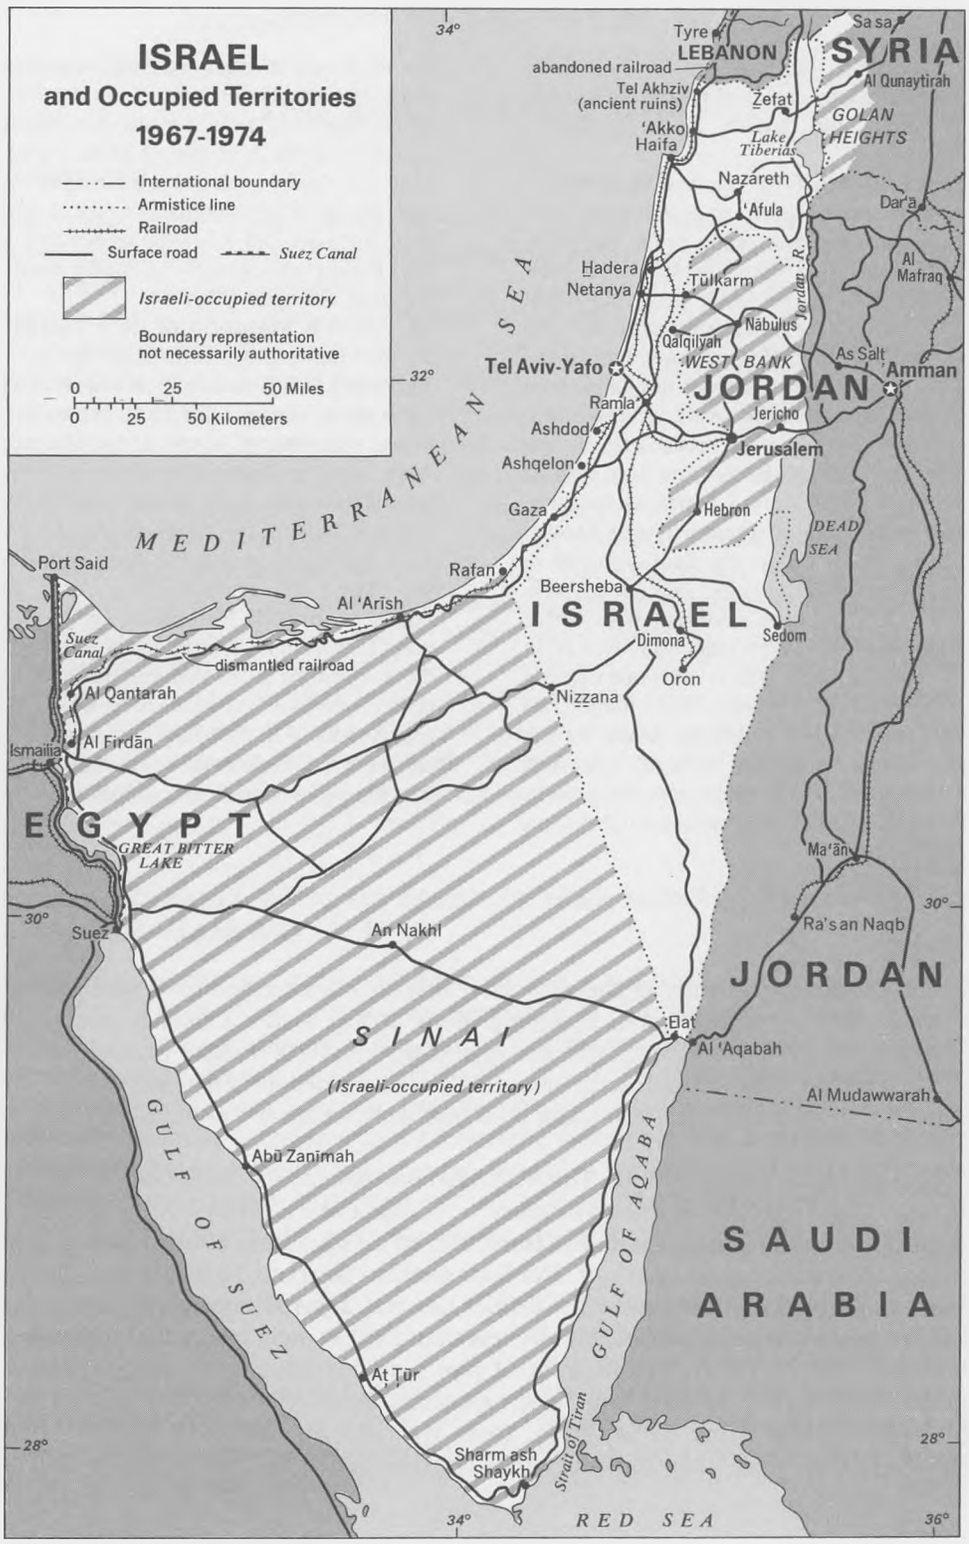
1948, May 14. Independence of Israel. David Ben Gurion became Prime Minister of the new state.

Phase I: May 14–June 11

OPPOSING FORCES

Jewish. The Haganah, the army of the new Jewish state, commanded by **Israel Galili,** mobilized approximately 30,000 men, including about 2,500 in the Palmach under Colonel **Yigael Allon.** Weapons were available for approximately 30,000 more trained men in the Haganah reserve. In addition each settlement had a well-trained armed guard. Both the Irgun with about 3,500 men and the Stern Gang with 500 were under the nominal direction of the Haganah high command.

Arab. The Arab forces were various. The ALA had approximately 4,000 poorly trained troops in 4 major groups. Lebanon provided 4 infantry battalions and 2 artillery batteries, about 2,500 men; Syria 2 infantry brigades, 1 tank battalion, and an air squadron, about 5,000 men; Iraq 4 infantry brigades, an armored battalion, and 2 air squadrons, about 10,000 troops. The Transjordanian Arab Legion, commanded by British General John Glubb, comprised 3 brigade groups and 4 armored car battalions, slightly less than 10,000 men, by far the best trained and most effective of all of the Arab contingents. Egypt provided initially 1 brigade group, 2 or 3 independent battalions, 2 air squadrons, and supporting units, about 7,500 troops. In addition to about 4,000 in the Army of Salvation, there was also an unknown number of armed Palestinian Arabs (at least 50,000) in local units which—despite poor organization and lack of



Israel and Occupied Territories, 1967–1974

training—were a constant threat to the Jewish community and tied down a substantial proportion of the mobilized Jewish strength.

OPERATIONS IN THE NORTH

1948, May 14–19. Syrian and Lebanese Invasions. Syrian invasion attempts were halted close to the frontier at **Degania** (where Major **Moshe Dayan** distinguished himself), **Zemach,** and **Mishmar Hayarden.** The Lebanese were stopped at **Malkya.**

1948, May 15–June 4. Iraqi Invasion. Advancing from Mafraq, through Irbid, the Iraqis crossed the Jordan south of the Sea of Galilee, but failed in repeated efforts to take **Geshir** (May 16–22). Meanwhile, other units moved into Jenin and occupied much of Samaria with armored spearheads approaching Natania (May 30). An Israeli effort to take **Jenin** was repulsed (June 1–4), but this forced the Iraqis to consolidate in the Nablus—Jenin area and withdraw from western Samaria.

1948, May 20. U.N. Mediator Appointed. The U.N. Security Council appointed Count **Folke Bernadotte** of Sweden as mediator between the Jews and Arabs.

1948, June 6–10. Renewed Syrian and Lebanese Offensive. The Syrians failed in their efforts to take **Ein Gev,** but did capture **Mishmar Hayarden.** The Lebanese, with some support from ALA and Syrian units, took **Matka** (June 6), **Ramat Naftali** (June 7), and **Kadesh** (June 7). Exploiting these successes, the ALA was able to overrun much of north-central Galilee.

OPERATIONS IN THE CENTRAL SECTOR

1948, May 15–25. Battle of Jerusalem. In hard fighting, General Glubb's Arab Legion seized and held the eastern and southern portions of New Jerusalem and occupied most of the Old City without opposition.

1948, May 15–28. Siege of the Jewish Quarter of Old Jerusalem. With some assistance from local Arabs, the Arab Legion systematically fought its way through the Jewish Quarter, repelling 2 Jewish relief attempts. The besieged garrison was finally forced to surrender.

1948, May 18–June 10. Struggle for the Tel Aviv–Jerusalem Road. Jewish forces under American volunteer Colonel **David "Micky" Marcus,** failed to break through the Arab-held road from Tel Aviv to Jerusalem, but succeeded in protecting the builders of a new road through the mountains farther south; this was opened 1 day before a U.N.-sponsored cease-fire (June 10). A few hours before the cease-fire went into effect, Marcus (who spoke no Hebrew) was killed by a Jewish sentry when he ignored a challenge.

1948, May 25–30. First Battle of Latrun (Bab el Wed). A Legion battalion under Lieutenant Colonel **Habis el Majali** occupied Latrun to secure the Tel Aviv-Jerusalem Road and pose a threat to Tel Aviv. Repeated Jewish efforts to drive them out were repulsed.

1948, June 9–10. Second Battle of Latrun. Again the Arab Legion repulsed Jewish attacks.

OPERATIONS IN THE SOUTH

1948, May 15. Egyptian Invasion. Two Egyptian brigade groups advanced into Palestine, under Major General **Ahmed Ali el-Mawawi.** The main force, based at El Arish, advanced up the coast to secure Gaza and threaten Tel Aviv. The smaller force, mostly ALA volunteers, advanced from Abu Ageila via Beersheba toward Jerusalem.

1948, May 16–June 7. Egyptian Coastal Offensive. The Egyptians advanced through Gaza, held by ALA units and local contingents (May 16). After a bitter battle this column captured **Yad Mordechai** (May 19–24), then advanced through Majdal and Ashkelon to seize **Ashdod** (May 29), only 25 miles from Tel Aviv. A Jewish attempt to recapture Ashdod was repulsed (June 2–3). The bypassed settlement of **Nitzanin** was then attacked and taken

after a bitter fight (June 7), securing Egyptian communications back to El Arish.

1948, May 16–June 10. Egyptian Inland Offensive. The other column, advancing through El Auja, occupied Beersheba (May 20) and Hebron (May 21), and made contact with the Arab Legion at Bethlehem (May 22).

1948, June 11–July 9. The First Truce. Under U.N. auspices, both sides eagerly accepted the opportunity to rest, reorganize, and regroup. By now the Israelis had mobilized an army of 49,000. The first international police force, 49 uniformed U.N. guards, arrived from New York (June 20).

Phase II: July 9–18, "The Ten-Day Offensive"

OPERATIONS IN THE NORTH

1948, July 9–14. Third Battle of Mishmar Hayarden. A serious Israeli effort failed to drive the Syrians out of their bridge-head west of the upper Jordan River.

1948, July 12–16. Israeli Nazareth Offensive. Israeli units expanded control of the coast north of Haifa, then turned their attention eastward toward Nazareth. An abortive offensive by Kaukji was thrown back, and the Israelis pressed on to seize his Nazareth base.

OPERATIONS IN THE CENTRAL SECTOR

1948, July 9–12. Israeli Lod (Lydda), Ramle Offensive. As part of a major effort to clear the Arab Legion from the coastal plain, and to secure the Tel Aviv-Jerusalem Corridor, the towns of Lydda (Lod) and Ramle and the nearby airport were occupied by the Israelis in tough fighting.

1948, July 9–18. Second Battle for Jerusalem. Israeli offensive efforts were repulsed by the Arab Legion.

1948, July 14–18. Third Battle of Latrun. Repeated Jewish efforts to take **Latrun** were unsuccessful.

OPERATIONS IN THE SOUTH

Israeli probes along the entire Egyptian front across central Palestine met with little success.

1948, July 18–October 15. The Second Truce. Once again both sides were eager to take advantage of the truce. The Israelis had taken the initiative in most areas of Palestine with limited success, and they felt the need for more time to prepare for a renewed offensive. The Arabs, shocked by the organization and equipment of the Jews and their ability to undertake major offensives in most regions of Palestine, were anxious to end the fighting as quickly as possible. The Israelis' total mobilized forces at the end of the truce were over 90,000, giving them a substantial numerical superiority over the Arabs.

1948, September 17. Assassination of U.N. Mediator. Confident of success in the war, many Jews were resentful of Count Bernadotte's peace efforts, which would have forced them to relinquish territory which they had conquered or which they hoped to occupy. He was killed by 3 unidentified men, apparently members of the Stern Gang. Dr. **Ralph Bunche** took over as U.N. mediator.

1948, September 29–October 15. Operations on the Egyptian Front. By mid-September neither side was paying much attention to the cease-fire along the Egyptian front. The Israeli pressure was particularly intense in the Faluja area, as they attempted to cut communications between the Egyptian coastal and inland corridors, and to open a secure line of communications into the Negev.

Phase III: October 6-November 5

OPERATIONS IN THE SOUTH

1948, October 15–19, Coastal Offensive. With Arab forces quiescent in the central and northern sectors, the Israelis concentrated their best forces against the Egyptians (now about 15,000 troops) in the south. An intensive effort to drive back the Egyptian forces in the Ashdod-Gaza area had some local successes but failed either to take any major positions or to cut the line of communications through Rafah.

1948, October 19–21. Israeli Beersheba Offensive. A drive to open firm communications

with the Negev was successful. After severe fighting **Huleiqat** was taken (October 19) cutting communications between the 2 Egyptian corridors. Prompt exploitation of this success resulted in the capture of **Beersheba** (October 21). The road to the Negev was open. The Egyptian forces in the Hebron area and an Egyptian brigade group in Faluja were isolated.

1948, October 27–November 5. Egyptian Withdrawal. With their coastal line of communications now seriously threatened, the Egyptians withdrew from Ashdod (October 27) and Majdal (November 5), concentrating their remaining strength (other than forces in the Faluja and Hebron pockets) in the Asluj-Gaza-El Arish area.

CENTRAL SECTOR

1948, October–November. Limited Israeli Offensives. The Israelis succeeded in their efforts to widen the Jerusalem-Tel Aviv axis and to expand their control of regions on the central plateau, north and south of Jerusalem. They were defeated by the Arab Legion, however, in a probe near **Beit Gubrin** (between Faluja and Hebron).

1948, November 30. Israeli-Transjordan Cease-Fire.

1948, December 1. Union of Transjordan and Arab Palestine West of the Jordan. King Abdullah was proclaimed King of Arab Palestine, arousing the ire of most other Arab states. An official union of Arab Palestine and Transjordan was proclaimed in Amman, with the name Hashemite Kingdom of Jordan.

OPERATIONS IN THE NORTH

1948, October 22–31. North Galilee Offensive. Kaukji's ALA probed successfully at **Manara** (October 22), just south of the Lebanese border. In response, the Israelis mounted a major offensive with the dual aim of destroying the ALA and securing all of northern Galilee. After an initial Israeli setback at **Tarshia** (October 28), the ALA was driven back into Lebanon as a result of Israeli successes at **Gish** (October 28) and **Sasa** (October 29). After occupying Tarshia (October 30), the Israelis cleared Arab resistance from the Hula Valley, retook Manara, and seized a strip of southern Lebanon. They then ceased operations to consolidate their gains.

1948, November 30. Cease-Fire in the North. Shaky local cease-fires were arranged by the Israelis with the opposing Syrian and Lebanese commanders.

Phase IV: November 21–January 7

1948, November 19–December 7. Egyptian Offensive. Although the Egyptians failed in their effort to relieve the Faluja Pocket, they substantially expanded their holdings east of Gaza and in the Asluj area.

1948, December 20–1949, January 7. Israeli Sinai Offensive. With cease-fires in effect elsewhere around the periphery of Israel, the Israelis mounted a major offensive to force Egypt to withdraw from the war. In a series of encircling maneuvers, **Rafah** was isolated (December 22), then **Asluj** was taken (December 25), and next **Auja** (December 27). While one Israeli column turned west toward Rafah, the other, under Colonel Allon, struck south into the Sinai from Auja and took Abu Ageila after a short fight (December 28). Turning north toward El Arish, the Israelis seized the airfield and outlying villages, but determined Egyptian defense halted the drive east of the road and railroad (December 29). The Israelis turned northeast toward Rafah.

1949, January 7. Israeli-Egyptian Cease-Fire. As the Israelis prepared to attack Rafah, the Egyptians asked the UN Security Council to arrange an armistice, which was immediately granted. (See p. 1368.)

1949, January–July. Armistice Negotiations. These negotiations were held on the island of Rhodes, under the chairmanship of UN mediator **Dr. Ralph Bunche.** Israel signed armistices with Egypt (February 24), Lebanon (March 23), Jordan (April 3), and Syria (July 20). There were no peace agreements.

The 1956 War (Suez or Sinai War) October 29–November 6, 1956

Background

1956, July 4–26. Tension along Israeli Frontiers. Mounting tension, including a number of armed clashes along the Israeli-Jordan and Israeli-Gaza borders, caused U.N. Secretary General **Dag Hammarsk-jöld,** to visit the Middle East to attempt to restore the cease-fire.

1956, July 18. United States Withdraws Promised Aid to Egypt for Aswan Dam Project. This announcement by Secretary of State **John Foster Dulles,** shortly after Egyptian President **Gamal Abdel Nasser** had announced that Egypt would receive American and British help for the project, infuriated the Egyptian president. American aid had been conditional upon economic viability, and the rejection was based essentially on economic considerations; however, political considerations also undoubtedly contributed: American unhappiness over increasingly friendly relations of Egypt with the Soviet Union and other states of the Communist Bloc, and pro-Israeli sentiment in the United States.

1956, July 26. Nasser Announces Nationalization of the Suez Canal. In retaliation for the American reneging on Aswan, Nasser announced Canal revenues would be used for the dam's construction. Britain and France raised the issue in the U.N. Security Council and started secret plans for military action (August 3).

1956, August 16–30. New Violence along Israel's Frontiers with Egypt and Jordan. Increasing seriousness of incidents aroused international fears of outbreak of a new Middle East war.

1956, October 5. Security Council Debate Opens on Suez Canal. An Anglo-French proposal for a return to some measures of international control was approved by a majority but vetoed by the U.S.S.R.

1956, October 15. Jordan Accuses Israel of Aggression in U.N. Security Council. This was the result of more shooting incidents and increasing tension on the Israel-Jordan frontier.

1956, October 24. Secret Anglo-French-Israeli Agreement. At Sèvres final agreement was reached on covert coordination of military operations against Egypt.

Opposing Plans

Israeli Plans

Ten brigades (6 infantry, 1 airborne, and 3 armored) were assigned to the Southern Command of Colonel **Asaf Simhoni;** 6 others were held in reserve in the central and northern sectors. Southern Command forces were divided into 4 task groups, each assigned to 1 of 4 corresponding land routes. The stated objectives of the Sinai Campaign, code-named Operation "Kadesh," were: to create a military threat to the Suez Canal by seizing the high ground to its east; to capture the Strait of Tiran; to create confusion in the ranks of the Egyptian Army, and to bring about its collapse. These objectives were directly related to an expected Anglo-French operation against the Suez Canal from the north.

Egyptian Plans

Evidence of the massing Anglo-French forces on Malta and Cyprus prompted Nasser to withdraw approximately half the Sinai garrison to the Delta region and the Canal Zone. Remaining in the Sinai were 2 infantry divisions and additional miscellaneous forces totaling some 30,000

men under the Eastern Command of Major General **Ali Amer,** most deployed in static defense positions in the northeast triangle formed by Rafah, Abu Ageila, and El Arish.

Anglo-French Plans

After Egyptian nationalization of the Suez Canal, British General Sir Hugh Stockwell was directed to formulate a plan for seizure of the Suez Canal by a joint Anglo-French expeditionary force. To avoid the appearance of imperialist aggression, the Anglo-French allies entered into secret negotiations with Israel to explore the possibility of relating their planned invasion to a renewed Arab-Israeli war. The modified plans called for Israel to create a threat to the Suez Canal, providing an excuse for Anglo-French intervention. The 2 governments would call on Israel and Egypt to withdraw 10 miles from the Canal, and when (as expected) the Egyptians refused, the allies would seize the Canal. Code-named "Musketeer," the operation was under the command of British General **Sir Charles Keightley,** with French Vice Admiral **Pierre Barjot** as deputy, General Stockwell commanding the land forces, French General **André Beaufre** as his deputy, Air Marshal **Denis Barnett** in command of air forces, and Admiral **Denis Dunford-Slayter** of naval forces. The necessity for coordination with Israel resulted in a delay of the planned operation from early September to early November.

OPERATIONS

1956, October 29. First Day. As the 1st Battalion of Colonel **Ariel Sharon's** 202nd Paratroop Brigade dropped near the eastern entrance to the **Mitla Pass,** the remainder of the brigade crossed the frontier and took **Kuntilla.** The brigade continued toward Thamad. Near Eilat, the border position of **Ras el-Nagb** was taken by the 9th Infantry Brigade, under Colonel **Avraham Yoffe,** in preparation for an overland march to Sharm el-Sheikh. Egyptian Commander in Chief, General **Abdel Hakim Amer,** ordered an infantry brigade and most of an armored division to cross the Canal to reinforce the Sinai garrison.

1956, October 30, Second Day. The Israeli paratroop battalion near Mitla Pass repulsed Egyptian ground and air attacks. Sharon's main body captured **Thamad** and linked up with the paratroop battalion before midnight. Farther north the Israeli Central Task Group (approximately a division), under Colonel **Yehuda Wallach,** captured **Sabha** and **Kusseima,** then began an attack on the formidable Egyptian defensive position of **Abu Ageila.** The Egyptian 4th Armored Division, having crossed the Canal, advanced to the vicinity of Bir Gifgafa and Bir Rud Salim.

1956, October 30. Anglo-French Ultimatum. At 1800 the British and French governments called on both sides for cessation of hostilities, withdrawal of all forces from the Canal, and approval of temporary Anglo-French occupation of Port Said, Ismailia, and Suez to guarantee freedom of transit in the Canal. Anticipating Egyptian rejection of the ultimatum, the Anglo-French invasion flotilla left Malta.

1956, October 31. Third Day. A large combat patrol of Sharon's paratroopers was ambushed in the **Mitla Pass.** Intense daylong fighting was climaxed by hand-to-hand combat for control of positions in caves in the walls of the Pass. Many of them were taken by the Israelis after dark, but the Egyptians still retained a substantial portion of the defile. At Abu Ageila, part of the Egyptian defense was overrun, but one Israeli brigade was repulsed with heavy losses. Israeli armored spearheads from the Central Task Group took **Bir Hassnah, Jebel Libni,** and **Bir Hama.**

1956, October 31. Israeli Naval Victory. Following the bombardment of naval and oil installations in Haifa, the Egyptian destroyer

Ibrahim al-Awal was captured by the Israeli Navy after a running battle at sea and was towed into Haifa harbor.

1956, October 31. Anglo-French Aerial Bombardment. All major Egyptian air bases were hit. President Nasser ordered a phased withdrawal of all forces in the Sinai to prevent them from being cut off by the expected allied invasion.

1956, November 1. Fourth Day. After another repulse at Abu Ageila, Israeli GHQ suspended further assaults on that stronghold. The Northern Task Group (approximately division strength) commanded by Colonel **Haim Laskov** captured **Rafah,** and Israeli armor advanced along the coastal road toward El Arish. By midnight all the Egyptian forces in the Sinai (except for the garrison at Sharm el-Sheikh, which lacked transportation, and the forces in Gaza, which were completely cut off by Israeli units) had begun to withdraw.

1956, November 2. Fifth Day. The 9th Infantry Brigade advanced down the coast of the Gulf of Aqaba toward Sharm el-Sheikh. Elements of the 202nd Paratroop Brigade and the 12th Infantry Brigade advanced to the Gulf of Suez from Mitla Pass and turned south also toward Sharm el-Sheikh. The Egyptians completed their evacuation of the Abu Ageila defenses and were pursued by the Israelis through Bir Gifgafa to a point 10 miles from the Canal. The 27th Armored Brigade under Colonel **Haim Bar Lev** captured **El Arish** and advanced as far as Romani. The 11th Infantry Brigade of Colonel **Aharon Doron** captured the northern half of the Gaza Strip, including the city of **Gaza.** All Egyptian forces not cut off by the Israelis completed the withdrawal from the Sinai.

1956, November 2. Egypt Accepts U.N. Call for a Cease-Fire with Israel. The Anglo-French bombardment of Egyptian air-fields and military installations continued unabated.

1956, November 3. Sixth Day. The Israeli 9th Brigade continued its tortuous progress down the Sinai coast. The paratroopers advancing down the Gulf of Suez coast captured the oil fields at Ras Sudar, Abu Zneima, and El Tur. The 11th Brigade captured Khan Yunis, completing its occupation of the Gaza Strip. The commander of the Sharm el-Sheikh garrison, **Colonel Raif Mahfouz Zaki,** withdrew his forces from Ras Nasrani and consolidated for defense.

1956, November 3–4. Israel Accepts and Rejects the U.N. Call for Cease-Fire. Israel at first assumed that by the time the cease-fire could take effect, Sharm el-Sheikh would have been captured. Cessation of hostilities, however, would reduce Anglo-French justification for intervention at the Canal. Under Anglo-French pressure, therefore, Israeli Prime Minister Ben Gurion withdrew Israel's acceptance by attaching impossible conditions to it.

1956, November 4. Seventh Day. The 9th Brigade continued slowly down the coast over very difficult terrain and passed through Ras Nasrani. Three miles north of Sharm el-Sheikh the brigade came under heavy fire.

1956, November 5. Eighth Day. The first assault on **Sharm el-Sheikh,** just at midnight, was stopped by a minefield and covering fire. At 0530 the attack was renewed with air and mortar support, and at 0930 Sharm el-Sheikh surrendered. The paratroops on the Gulf of Suez road arrived in time to take part in the final assault.

1956, November 5. Anglo-French Air Drop. At 0820, 500 allied paratroopers landed at Gamil Airfield near Port Said, soon followed by over 600 more near Port Fuad. They seized the waterworks and isolated the cities. The Chief of Staff of the Egyptian Eastern Command, Brigadier General **Salah ed-Din Moguy,** arranged a brief truce with Brigadier **M.A. H. Butler,** the paratroop commander, but fighting was renewed at 2230.

1956, November 6. Allied Amphibious Assault. At 0650 the amphibious forces began landing at Port Said. Moguy was captured at 1000, but refused to order a surrender. At 1930 Stockwell received an order to cease fire at midnight. On his order Butler advanced to El-Kap before the cease-fire was effected.

Losses

	Killed	*Wounded*	*Captured*	*Aircraft*
Israel	189	899	4	15
Egypt (in combat with Israel)	(30 officers) 1,000[a]	4,000[b]	6,000	8
Egypt (in combat with Anglo-French)	650[c]	900[c]	185	207[d]
Britain	16	96	0	4[e]
France	10	33	0	1

[a] The most widely accepted figure.

[b] Estimate.

[c] The official estimate. Others run as high as 3,000.

[d] Of these, 200 destroyed on the ground.

[e] One of these was shot down over Syria by Syrian AA fire.

The Six-Day War June 5–10, 1967

Background

President Nasser of Egypt, who had concluded an alliance with Syria (November 1966), accused Israel of threatening aggression against Syria and promised to come to Syria's aid (May 16). He moved several divisions close to the Israeli-Egyptian border, in the eastern Sinai. On May 18 he demanded the withdrawal of the United Nations Emergency Force (UNEF), which had been patrolling the 1948–1956 cease-fire line. U.N. Secretary General **U Thant** ordered an immediate UNEF withdrawal. On May 22, Nasser, having placed a garrison at Sharm el-Sheikh, announced the blockade of the Strait of Tiran, effectively closing the Israeli port of Eilat. While the United States, within and without the U.N., endeavored to find a formula for peace, both sides seemed bent on war. On May 30 Egypt and Jordan signed a Mutual Security Treaty, and Egypt at once sent General **Abdul Moneim Riadh** to take command of allied Arab forces on the Jordan front. A chronology of prewar events follows:

May 16 Egypt declared a state of emergency.
May 17 Egypt and Syria announced "combat readiness," and Jordan announced mobilization.
May 18 Syria and Egypt placed troops on maximum alert; Iraq and Kuwait announced mobilization.
May 19 UNEF withdrawal.
May 20 Israel completed partial mobilization.
May 23 Saudi Arabian forces prepared to participate.
May 24 Jordanian mobilization completed.
May 28 Sudan mobilized.
May 29 Algerian units moved to Egypt.
May 30 Egypt and Jordan sign mutual security treaty.
May 31 Iraqi troops began moving to Jordan.

Israel had earlier announced that it would go to war under any of the following conditions: closing of the Strait of Tiran; sending of Iraqi troops to Jordan; signing of an Egyptian-Jordanian defense pact; withdrawal of UNEF forces. All of these conditions now existed. War thus was inevitable, although Nasser surprisingly did not think his actions would provoke an Israeli attack.

The Opposing Forces

The following table shows the numerical strengths of the principal participating forces. In most respects the Israeli Army was better trained and much more flexible than any of its opponents, with the possible exception of Jordan. Israeli first-line aircraft were more heavily armed, and the quality and training of Israeli pilots and support units were so much superior to those of the Arab pilots (who were in short supply) that the Israeli Air Force, under Major General **Mordechai Hod,** was at least two or three times more effective than the combined air forces of its Arab opponents.

Estimated Mobilization Strengths
June 5, 1967

	Mobilized Manpower	*Division or Equivalent*	*Tanks*	*Artillery Pieces*	*Combat Aircraft*	*Naval Vessels*[a]
Israel	230,000	8	1,100	200	260	22
Egypt	200,000	10	1,200	600	431	60
Syria	63,000	4	750	315	90	15
Jordan	56,000	3⅓	287	72	18	—
Iraq	90,000	5	200	500	110	15[b]

[a] Including MTBs.

[b] Not available for use against Israel.

Operations, Sinai Front

1967, June 5. Israeli Preemptive Air Strike. With the approval of Prime Minister **Levi Eshkol** and recently appointed Minister of Defense General Moshe Dayan, the Israeli General Staff, under Chief of Staff Lieutenant General **Itzhak Rabin,** decided that since war was inevitable, Israel should obtain the advantage of surprise by launching preemptive attack by air and ground. Early in the morning the Israeli Air Force, flying west over the Mediterranean, then south into Egypt, struck practically every Egyptian airfield and virtually wiped out the Egyptian Air Force. Later in the day, the IAF also destroyed the air forces of Jordan and Syria and—in retaliation for an Iraqi air strike against Israel—inflicted considerable damage on Iraqi air units based in the Mosul area.

1967, June 5. First Day. From north to south the Israeli forces comprised a reinforced mechanized brigade under Colonel **Yehuda Resheff,** a mechanized division commanded by Major General **Israel Tal,** an armored division under Major General **Avraham Yoffe,** a mechanized division under Major General Ariel Sharon; other smaller units were deployed along the frontier down to Eilat. Tal's division initiated the offensive by a drive into the Khan Yunis-Rafah-El Arish area. Resheff's brigade and attached elements drove into the Gaza Strip, and Sharon's division struck southward

against the critical fortifications in the Abu Ageila-Kusseima area. Later in the day Yoffe struck southward between the divisions of Tal and Sharon, to penetrate into the heart of the Sinai, to cut off the Egyptian retreat.

1967, June 4–6. Accusations of US Participation. In a radio conversation monitored by the Israelis, King Hussein agreed with President Nasser to accuse the United States of collaborating with Israel, but quickly stopped the accusations after release of the taped radio conversation by Israel. Most Arab nations, except for Jordan, followed Nasser's lead and broke diplomatic relations with the U.S.

1967, June 6. Second Day. Gaza surrendered to Resheff in the afternoon. Tal, having secured Rafah and El Arish, sent a task force down the El Arish-Romani road toward the Suez Canal, and turned inland with the rest of his division and joined Yoffe. Sharon, having quickly captured Abu Ageila, sent part of his force to assist in the mopping up of Rafah and El Arish; with the remainder he struck southward toward Nakhl and Mitla Pass. Yoffe, after a brief engagement east of Bir **Lahfan,** successfully attacked the main Egyptian concentration in the central Sinai at **Jebel Libni** in a night assault. Unknown to the Israelis, Field Marshal Abdel Hakim Amer, the Egyptian commander in chief, had sent orders to all of the Sinai units to withdraw behind the Suez Canal; by this order he completed the demoralization begun by the Israeli attack the day before.

1967, June 7. Third Day. Tal's main body approached Bir Gifgafa; his northern task force moved past Romani. Yoffe's leading brigade reached the eastern end of the Mitla Pass, out of fuel and short of ammunition, and was quickly surrounded by withdrawing Egyptian units. Yoffe's other brigade was en route to relieve this isolated and hard-pressed unit. Sharon approached Nakhl. Other units cleared the northeastern Sinai, and airborne and amphibious forces seized **Sharm el-Sheikh.**

1967, June 8. Fourth Day. Egyptian armored units from Ismailia attempted to cover the general Egyptian withdrawal but were easily repulsed by Tal, who then pressed on to the Suez Canal between Kantara and Ismailia. Yoffe's division, having relieved its isolated brigade, pressed through the Mitla Pass and reached the Canal opposite Port Suez. After a grueling march through the desert Sharon's division took **Nakhl,** then followed Yoffe through the Mitla Pass. While there were a number of isolated Egyptian units still intact in the Sinai, for all practical purposes it was completely in the hands of the Israeli Army.

1967, June 9. Ceasefire. The UN Security Council reached a ceasefire which provided for Israeli control of the Sinai east of the Suez Canal. Israel accepted immediately, Egypt late the next day. (See also p. 1369.)

Operations, Jordanian Front

UNEASY NEUTRALISTS

Israeli strategy called for avoiding operations against Jordan and Syria until a decision had been reached on the Sinai front. At the same time Israel was strongly tempted to eliminate the deep Jordanian West Bank salient into the heart of Israel, and to wrest from the Jordanians control of the holiest places of Judaism in Jerusalem. There were good reasons for King Hussein to remain neutral; but Arab pressures to join in the war, combined with his recent agreement with Nasser, made neutrality difficult. Apparently he hoped that long-range artillery fire by 155mm "Long Tom" guns against Tel Aviv and other places would satisfy his Arab allies without provoking Israel to full-scale hostilities. However, Jordanian long-range artillery fire threatened to close down the runways at Ramot David, Israel's principal northern air base. Israel's leader would not allow this, and in mid-morning, June 5, decided on war against Jordan.

THE BATTLE FOR JERUSALEM

1967, June 5. First Day. Having decided that war against Jordan was unavoidable, Israel decided to take the initiative in Jerusalem, where sporadic firing, mostly by Jordanians, had already begun. Reinforcements were sent to Brigadier. General **Uzi Narkiss,** commanding Israel's Central Command, permitting him to take the offensive with 3 brigades, with the main effort by a parachute brigade under Colonel **Mordechai Gur.** The Israelis closed in on the old walled city of Jerusalem, whose garrison of 1 reinforced brigade was commanded by Jordanian Brigadier **Ata Ali.**

1967, June 6. Second Day. The Israeli advance against the Old City of Jerusalem slowed down in the face of stubborn opposition. Other Israeli units, however, tightened a wider ring around the city. The ridge to the east was seized, and a series of Jordanian relief efforts was smashed by combined ground and air forces. Elements of a tank brigade seized **Ramallah** to the north, while another brigade captured Latrun to the west. For the first time since 1947, the old Tel Aviv–Jerusalem Road was open to Jewish traffic.

1967, June 7. Third Day. Colonel **Gur** stormed into the Old City of **Jerusalem,** as the Jordanian garrison withdrew. **Bethlehem** was taken early in the afternoon, **Hebron** and **Etzion** soon afterward.

1967, June 7. Ceasefire. Both sides accepted the UN Security Council call for a ceasefire.

THE BATTLE OF JENIN-NABLUS

1967, June 5. First Day. The Israeli Northern Command, under Major General **David Elazar,** was roughly equivalent to 2½ divisions. Upon receipt of orders to seize Jenin and Nablus, and to push on to the Jordan River, Elazar committed one division and a reinforced armored brigade. By midnight armored and infantry units were approaching Jenin.

1967, June 6. Second Day. Converging Israeli columns took **Jenin** in hard fighting.

1967, June 7. Third Day. Despite repeated Jordanian counterattacks, the Israelis pressed on to **Nablus.** After another hard battle they secured Nablus just before dark. Although badly hurt and seriously depleted, the Jordanian forces withdrew across the Jordan River and were still intact when the Israeli and Jordanian governments agreed to a U.N. call for a ceasefire at 2000 hours.

OPERATIONS, SYRIAN FRONT

1967, June 5–8. First to Fourth Days. The Golan Heights were held by 6 Syrian brigades, with 6 more in reserve east of Kuneitra. For 4 days Elazar was permitted only long-range artillery duels with the Syrians, who obviously had no intention of seizing the initiative.

1967, June 9. Fifth Day. The U.N.-initiated cease-fire agreed to on June 8 was promptly violated by intensive artillery fire from both sides during the night of June 8/9. Elazar was ordered to begin a major offensive early on June 9. He concentrated his available forces for an initial advance through the Dan-Banyas area onto the northern Golan plateau, along the foothills of Mount Hermon. By nightfall these units had fought their way through the first line of Syrian defenses guarding the approaches to the northern Golan, and 3 brigades were poised to debouche onto the plateau early the following morning. Meanwhile, other units were forcing their way up the escarpment north of the Sea of Galilee, and Elazar had sent orders to the units recently engaged against the Jordanians in the Jenin-Nablus area to move north to strike into the Golan south of the Sea of Galilee.

1967, June 10. Sixth Day. The Israelis pushed through the crumbling Syrian defenses on the northern Golan early in the morning, then pressed ahead across the plateau to converge on Kuneitra from the north, west, and southwest. Meanwhile, the troops redeployed from the Jordan front had driven northeastward up the Yarmuk Valley to occupy the southern Golan and to threaten Kuneitra from the south. By dark Kuneitra was surrounded, and one armored unit was occupying the city.

1967, June 10. Cease-fire. The cease-fire again

became effective at 1830 hours, and this time was observed by both sides.

COMMENT. *This brief 3-front campaign clearly demonstrated the combat effectiveness superiority of the Israelis over their more numerous Arab foes. The scope, decisiveness, and speed of the victory was undoubtedly enhanced by the orders of the Egyptian commander, Field Marshal Amer, for a general Egyptian withdrawal on June 6, which turned an inevitable defeat into a disastrous rout. This contributed to an unwarranted Israeli contempt for the Egyptians, and an underestimation of their military potential which would have important consequences a few years later.*

The War at Sea

Naval operations were almost entirely between Egypt and Israel, since there was no naval activity by Jordan and practically none by Syria.

ESTIMATED LOSSES
June 5–10, 1967

	Killed	*Wounded*	*Prisoners and Missing*	*Tanks*	*Combat Aircraft*
Israel	800[a]	2,440	18	100	40[b]
Egypt	11,500[c]	15,000	5,500	700	264
Syria	700	3,500	500	105	58
Jordan	2,000	5,000	4,500[d]	125	22
Iraq	100	300	—	20	24

[a] Israel reported 679 dead and 2,563 wounded on June 11; it is assumed that about half of 225 seriously wounded later died.

[b] Only 2 in air-to-air combat; an air combat loss ratio of exactly 1–25.

[c] More than half were lost in the desert.

[d] Many probably were deserters with West Bank origins; Israel captured approximately 500 Jordanian prisoners of war.

1967, June 3–4. Israeli Deception. Four landing craft, on huge trucks, were ostentatiously sent by road from the Mediterranean to Eilat, then sent back at night to repeat the ostentatious daylight movement. Egyptian intelligence assumed that at least 8 (and probably more, due to multiple reports) of Israel's 18 LCTs were available for operations in the Gulf of Aqaba. During the night of June 4/5 several Egyptian vessels were sent from the Mediterranean through the Suez Canal to the Red Sea, to counter the anticipated Israeli threat. In this way Israel substantially reduced the imbalance of forces in the Mediterranean.

1967, June 5. Engagement off Port Said. An Israeli destroyer and several MTBs approached Port Said after dark. They were met outside the breakwater by 2 Egyptian *Osa*-class missile boats. After an inconclusive exchange of fire, with little damage to either side, the Egyptian vessels withdrew into the harbor. Israeli frogmen also entered the harbors of Port Said and Alexandria; some damage was done to Egyptian vessels in Alexandria, but all of the frogmen there were captured.

1967, June 6. Egyptian Withdrawal from Port Said. The intensity of Israeli air attacks, and the threat of General Tal's advance along the northern Sinai coast, caused the Egyptian Navy to withdraw to Alexandria all of its vessels based on Port Said.

1967, June 6–7. Egyptian Coastal Bombard-

ment. Three Egyptian submarines briefly shelled the Israeli coast, near Ashdod, and north and south of Haifa. They submerged and withdrew when attacked by Israeli air and naval forces.

1967, June 7. Israeli Seizure of Sharm el-Sheikh. A task force of 3 MTBs seized the Egyptian fortifications at **Sharm el-Sheikh.** After Israeli paratroops arrived, the naval vessels proceeded through the Strait of Tiran to the Red Sea without interference.

1967, June 8. The *Liberty* Incident. During the afternoon the USS *Liberty*, electronics surveillance vessel, 14 nautical miles north of El Arish, was attacked and seriously damaged by Israeli fighter-bombers and MTBs. The Israeli government's subsequent apology was accepted by the United States.

Economic Warfare

On June 5, at an Arab League meeting in Baghdad, representatives of Iraq, Saudi Arabia, Qatar, Bahrain, Kuwait, Libya, Algeria, Abu Dhabi, Egypt, Syria, and Lebanon agreed to stop the flow of oil to all nations they believed had attacked any Arab states. This included the United States, whom the Egyptians also accused of participating in the first air attack, Great Britain, and West Germany, as well as Israel. Only Kuwait, Iraq, and Algeria took serious measures to carry out this embargo.

The "October War" (Yom Kippur War or the War of Ramadan) October 6–24, 1973

Background

President **Anwar Sadat** of Egypt apparently decided in November 1972 to go to war on the basis of readiness estimates supplied to him by the Egyptian Minister of War, General (later Field Marshal) **Ahmed Ismail Ali.** Both knew that Egypt had not reached tactical-technical military parity with Israel and that there might be another Israeli victory. Sadat, however, believed that Israel was satisfied with the *status quo*, and its *de facto* annexation of the territories conquered in 1967, and thus would make no moves toward reasonable negotiations without pressure from one or both of the great powers. The only possibility of moving toward a Middle East settlement seemed to be to precipitate action that would force the major powers and the U.N. to pay attention to the "no peace no war" situation in the Middle East.

1973, September 12. Arabs Select D-Day. Sadat, General Ismail, and President **Hafez Assad** of Syria met secretly during an Arab summit meeting in Cairo. Extraordinary and successful measures were taken to preserve secrecy of plans.

1973, September 26. Arab Concentrations; Israeli Alert. Egypt and Syria announced concentrations of troops for routine maneuvers. Although Israeli and U.S. intelligence believed there would be no war, a partial but perfunctory Israeli alert was ordered, including deployment of a second armored brigade to the Golan area (September 29).

1973, October 4–5. Partial Evacuation of Soviet Advisors. The hasty departure of some Soviet advisers and all dependents was noted by Israeli and American intelligence agencies, which again informed their governments that there would be no war (October 5).

1973, October 6, 0400 Hours. War Inevitable. Israeli Director of Intelligence, **General Elihau Zeira,** informed Lieutenant General David Elazar that the Arabs would attack at

1800 hours. Israeli mobilization was ordered at 0930.

Sinai Front

1973, October 6, 1405 Hours. Outbreak of War. A massive Egyptian air strike against Israeli artillery and command positions and a simultaneous intensive artillery bombardment of Bar Lev Line fortifications along the Canal achieved complete tactical surprise; Israeli frontline units had been only partially alerted.

1973, October 6–7. Egyptian Assault Crossing of Suez Canal. Egyptian commandos crossed the Canal at 1435, followed by infantry, engineers, and a few amphibious and ferried tanks. Engineers, opening approaches in the Bar Lev Line's sand embankment by demolitions and water jets, had bridges operational in the Second Army area before midnight October 7. In the Third Army area the bridge construction was not completed until the night of October 7/8. About 500 Egyptian tanks crossed the Canal. Two quickly mobilized reserve Israeli armored divisions under Generals Ariel (Arik) Sharon and **Abraham (Bren) Adan** approached the front, Adan near Romani, Sharon near Tasa.

1973, October 8. Israeli Counterattack Repulsed. Counterattacks against the Egyptian Second Army, by Adan's division and Sharon's division (only parts were engaged), were repulsed with heavy losses. The Israelis dug in and the Egyptians consolidated, linking up all their bridgeheads. Israeli close support aircraft suffered heavy losses from Egyptian antiaircraft defense using Soviet missiles and guns.

1973, October 11. Egyptians Plan Offensive. For several days General Ismail rejected subordinates' recommendations to attempt to drive deeper into Sinai. However, following appeals for help from the hardpressed Syrians, he reluctantly ordered an offensive to draw Israeli strength, particularly air power, to the Sinai front.

1973, October 14. Egyptian Offensive Repulsed. The Egyptians were thrown back with heavy losses, particularly in tanks.

1973, October 15–16. Israeli Thrust across Suez Canal. Sharon, hitting the boundary between the Egyptian Second and Third Armies, was able to establish a bridgehead with a brigade of paratroopers near Deversoir about midnight.

1973, October 16–18. Battle of the "Chinese Farm."* The Egyptian Second Army closed the corridor behind Sharon, isolating his division in small bridgeheads east and west of the Canal. In intensive fighting Adan's division broke through, bringing a bridge to the crossing point. The Second Army with some assistance from the Third Army, tried unsuccessfully but repeatedly to close the corridor leading to the Israeli crossing site. Egyptian tank losses again were heavy. Adan's division then crossed (night 17–18 October).

1973, October 18–19. Expansion of Israeli Bridgehead. Despite the Chinese Farm battle and continuing bridging problems, Adan's division pushed westward from Sharon's bridgehead, overrunning Egyptian rear areas, including AA missile sites, and Israeli planes attacked ground targets with less opposition. Sharon's attempt to seize **Ismailia** was repulsed (October 19).

1973, October 20–22. Israeli Breakout from Bridgehead. Repeated thrusts by Sharon to the northwest against Ismailia were contained by paratroop and armored reserves of the Second and Third Army, reinforced from Cairo. Adan's drive south met weaker resistance cutting the main Suez-Cairo road northeast of Suez (October 22).

1973, October 22. First Cease-Fire, 1852 Hours. Both sides promptly claimed violations of the U.N. cease-fire. Israel sent strong reinforcements across the Canal.

1973, October 23–24. Battle of Suez-Adabiya. Despite the cease-fire Adan was ordered to continue his southward drive to the Gulf of Suez, near Suez, isolating the Third Army. At the same time another Israeli division

* A former Japanese experimental agricultural station; occupying Israeli troops in 1967 had assumed the calligraphy was Chinese.

under General **Kalman Magen** followed Adan and continued on to reach **Adabiya** on the Gulf of Suez. The Israelis also endeavored to take Suez, but were repulsed (October 23–24).

1973, October 24. Second Cease-Fire, 0700 Hours. Activity and artillery fire continued, but cease-fire finally came into effect.

COMMENT. *The Egyptian plan for crossing the Suez Canal and its implementation were superb. The Egyptian failure to plan adequately for security of the boundary between the 2 armies was a costly blunder. The Egyptians have claimed that they had adequate reserves and resources to reopen communications with the Third Army if the fighting had continued. This is doubtful, and had the war lasted a few days longer, the Third Army would probably have been forced to surrender. General Ismail has been severely criticized for failure to exploit his initial successes, particularly after the victory of October 8. Such criticisms fail to recognize that the Israelis retained a tremendous superiority in air power and in the ability to conduct mobile warfare; his decision not to exploit was as sound as that of Andrew Jackson after New Orleans (see p. 878) and Montgomery after Alam Halfa (see p. 1186). Despite some technical and tactical shortcomings, the Israeli crossing of the Canal was also brilliant as a demonstration of flexible improvisation, based upon sound doctrine.*

Perhaps most significant was the return of Egyptian confidence as their infantry stood firm, even though not always successfully, in the face of Israeli tanks. Contributing to this confidence were the Egyptian's simple, reliable Soviet-built antitank missiles—the "Sagger" and the RPG7. It seems, however, that at least as many Israeli tanks were knocked out by tank and antitank guns as by these missiles.

Golan Front

1973, October 6, 1405 Hours. Outbreak of War. A massive Syrian air strike and artillery bombardment against Israeli positions and installations on the Golan achieved complete tactical surprise.

1973, October 6. Fall of Mount Hermon. Syrian commandos, in a ground-helicopter attack, captured the fortified Israeli observation post on **Mount Hermon,** overlooking the Golan Plateau and the Damascus Plain.

1973, October 6–7. Repulse at Amadiye. North of Kuneitra the Syrian 7th Infantry Division was repulsed by the Israeli 7th Armored Brigade; most of the Syrian tanks were destroyed. The 3rd Syrian Tank Division, committed to pass through the 7th Infantry Division, suffered a costly defeat in a renewed major tank battle west of **Amadiye** (October 7).

1973, October 6–7. Breakthrough at Rafid. Taking advantage of weaker opposition and more favorable terrain, the Syrian 5th Mechanized Division broke through the defenses of the Israeli 188th Armored Brigade. In 2 days of fighting the Israeli brigade was virtually destroyed; the Israeli Golan command post at Khushniye was surrounded. Spearheads of the 5th Mechanized Division, reinforced by the 1st Tank Division, halted near the western escarpment of the Golan, as much by the need for logistical replenishment as by the pressure of recently mobilized Israeli units fed piecemeal into the battle.

1973, October 8–9. Israeli Counterattack. Assisted by units of the 7th Armored Brigade, displaced from the north, newly-arrived Israeli units drove back the Syrian 5th and 1st Divisions, in several places to the original front line. Most of the Syrian tanks were lost, many because they had run out of fuel and ammunition. With difficulty the 7th Brigade halted a renewed Syrian drive north of Kuneitra (October 9).

1973, October 10–12. Israeli Counteroffensive. In a drive generally north of the Kuneitra-Damascus road, 3 Israeli divisions smashed through the first Syrian defensive zone east of the cease-fire line, and into the second zone, near Saassaa, in front of Damascus. The Israelis voluntarily halted their offensive and began to shift units to the Sinai front (October 12). The Iraqi 3rd Armored Division, on the south side of the Israeli salient (October 11), counterattacked but was ambushed and repulsed (October 12).

1973, October 15–19. Arab Counterattacks Repulsed. Another counterattack by the Iraqi

3rd Armored Division was repulsed (October 15). The Jordanian 40th Armored Brigade counterattacked beside the Iraqis but was also repulsed (October 16). Another general Arab counterattack, spearheaded by the Jordanians, was repulsed (October 19). The lines stabilized on the Damascus Plain.

1973, October 22. Israelis Retake Mount Hermon. Two Israeli efforts to retake their **Mount Hermon** position had been repulsed (October 8 and 21). In a final effort, just before the cease-fire became effective, helicopter-borne paratroops seized the original Syrian observation post, higher up than that of the Israelis, and the "Golani" Infantry Brigade finally retook the lost Israeli position.

1973, October 22, 1852 Hours. Save for some fighting continuing briefly on Mount Hermon, an uneasy lull came over the front.

COMMENT. *The Syrian attack was neither as well planned nor as well implemented as that of the Egyptians. Nevertheless Syrian fighting qualities, especially those of the 5th Mechanized Division, impressed the Israelis. Poor logistics, failure to recognize that a complete victory was in their grasp, and the self-sacrificing attacks of the Israeli Air Force were all that kept the Syrians from retaking the southern Golan on October 7. The Israelis were also impressed by Syrian tenacity on defense; there was no collapse and rout, as in 1967.*

The Air War

1973, October 6–8. Preeminence of the SAM. The first Israeli aircraft appeared over the Sinai and Golan fronts about 40 minutes after the Arab H-Hour. They immediately encountered Soviet-made Arab missiles in unexpected quantity and effectiveness. Before dark the Israelis lost more than 30 aircraft. In the following days Egyptian mobile SAM-6s claimed many Israeli planes, and the light, hand-carried Strela (SA-7) made many hits but damaged more planes than it destroyed. Israeli close air support was therefore negligible for several days.

1973, October 8–16. Disputed Skies over the Battlefields. Employing hastily devised tactics and utilizing chaff and electronic countermeasures (ECM), Israeli aircraft began to make a greater contribution to the ground battles. They claimed hits on Egyptian bridges over the Suez Canal and favorable results in strikes against Arab airfields. The Arabs, however, denied these claims.

1973, October 9–21. The Israeli Strategic Air Offensive against Syria. Claiming retaliation for Syrian "Frog" (long-range surface-to-surface missile) attacks on the Hula Valley, the IAF initiated an intensive and extremely effective strategic air bombardment campaign against targets (mostly industrial) deep within Syria, with a strike against the Syrian Defense Ministry in Damascus. Attacks on Syrian seaports, industrial plants, and fuel storage depots continued until the first ceasefire. The Syrian economy was severely affected.

1973, October 17–24. Israel Regains Air Preeminence over the Suez Canal. As General Adan's advancing tanks captured a number of Egyptian antiaircraft missile batteries and caused the more mobile SAM-6s to be moved hurriedly, a gap was created in the hitherto effective Egyptian anti-air network. Israeli aircraft quickly exploited this, and played a major role in the Israeli success in the Chinese Farm battle and in the Israeli breakout south from the west bank bridgehead.

COMMENT. *The SAMs—particularly SAM-6 and Strela—demonstrated that air superiority no longer assured as decisive an effect on the ground battle as had been the case since World War II. Desperate Israeli efforts to deal with the missile threat, particularly in the employment of ECM measures, regained only a slight (but nonetheless significant) measure of air superiority for the Israelis over the battlefield.*

The War at Sea

1973, October 6–25. Egyptian Blockade. Egypt declared waters of Israel's coasts were a "War Zone" severely curtailing Israeli commerce in the Mediterranean. A blockade by destroyers and submarines at the Strait of Bab el Mandeb stopped all traffic to Eilat.

1973, October 6. Action off Latakia. Israeli "Saar" missile boats striking at night at the Syrian seaport of **Latakia** were engaged by a Syrian squadron. The Israelis sank 4 Syrian vessels without loss to themselves. The surviving Syrians withdrew into the port.

1973, October 7–8. Second Action off Latakia. The results were inconclusive. The Syrian vessels again withdrew.

1973, October 7–8. Scattered Egyptian-Israeli Clashes. These occurred in the Mediterranean and Red seas. The results were inconclusive, with the Egyptians withdrawing in all instances.

1973, October 8–9. Action off Damietta. Egyptian vessels, coming out to meet Israeli raiding missile boats, suffered severe losses, and the survivors withdrew.

1973, October 9–10. Israeli Raids on Syrian Ports. Israeli missile vessels bombarded Latakia, Tartus, and Banias; there was no naval challenge by Syrian vessels.

1973, October 9–10. Action off Port Said. In an encounter between Israeli and Egyptian missile boats, 3 Egyptian vessels were sunk; the others withdrew to Damietta and Alexandria.

1973, October 12–13. Israeli Raids on Syrian Coast. Tartus and Latakia were again bombarded. There were inconclusive clashes with Syrian missile boats, which unsuccessfully attempted hit-and-run tactics.

1973, October 15–16. Nile Delta Raid. Israeli missile vessels sank a number of Egyptian landing craft.

1973, October 21–22. Israeli Attacks on Aboukir Bay and Alexandria. Two Egyptian patrol boats were sunk.

COMMENT. *Israeli "Saar" missile vessels, armed with the Israeli-made "Gabriel" missile, completely dominated the coastal waters off Syria and Egypt. Not a single hostile shell or missile was fired from the sea against the Israeli coast. On the other hand, the Egyptian blockade of the Strait of Bab el-Mandeb (southern entrance to Red Sea) cut off all commerce to and from Eilat, and the declared Egyptian blockade of Israel's Mediterranean coast also severely reduced ship traffic. However, the blockade had no noticeable effect on Israel during the relatively brief war.*

Involvement of the Superpowers

The association of the Soviet Union with Egypt and Syria had been only partially impaired by the Egyptian demand for withdrawal of most Soviet advisors and technicians in mid-1972 (see p. 1395). Both Egypt and Syria were almost completely dependent upon the U.S.S.R. for replacement and repair, equipment and parts. Despite close associations with the Soviet Union, however, the decision to go to war was certainly not dictated by the Soviets, and it is likely that the U.S.S.R. did not learn of the Arab plans to attack Israel until 2 or 3 days before the selected D-Day, when the warlike preparations of Egypt and Syria could no longer be concealed.

Israeli technological development was such that there was no need of assistance or advice in using, or maintaining, the wide variety of modern weapons and equipment which Israel had obtained from the United States. There was no collaboration in planning between the 2 countries. However, they maintained close contact in intelligence affairs, and both were very much aware of the Arab build-up in late September. Both sadly misestimated Arab intentions.

1973, October 6. Soviet Air Flights to Middle East Accelerate. This was primarily to return Soviets to the U.S.S.R. Both Syria and Egypt were so well supplied that resupply presumably seemed unnecessary.

1973, October 8. Israel Begins to Fly Supplies from the United States. The first of a number of flights from the United States to Israel by El Al aircraft took off from Oceana Naval Air Station, Virginia.

1973, October 9. Major Soviet Airlift to Egypt and Syria Begins. Flights went via

and/or over Hungary and Yugoslavia. About ⅔ of the flights were to Syria.

1973, October 13. American Airlift Begins. In response to urgent Israeli requests, the United States began to use American planes to supplement the El Al lift. The first 7 American C5A transport aircraft arrived in Israel, flying via the Azores (October 14).

1973, October 14–21. Massive Soviet and U.S. Airlifts Continue. By the time of the cease-fire the Soviets had airlifted about 15,000 tons, the U.S. more than 20,000.

1973, October 24. Alert of Soviet Airborne Troops. A force of about 7 divisions was alerted, presumably for airlift to Egypt if the Israelis did not loosen their stranglehold on the Egyptian Third Army. Apparently because of this alert, there was a decline in the Soviet resupply airlift.

1973, October 25. United States Military Forces Placed on "Precautionary Alert." Secretary of State Henry Kissinger announced that this was because "ambiguous" signs suggested the possibility of unilateral armed Soviet intervention in the Middle East. Unmistakably implied was the United States' determination to act militarily if necessary to prevent or respond to such intervention.

1973, October 27. United Nations Agreement Ends U.S.-Soviet Crisis. The U.N. Security Council, with both the U.S. and the U.S.S.R. voting affirmatively, agreed to establish for 6 months a 7,000-man international peace-keeping force to enforce the cease-fire in the Sinai and on the Golan. No permanent member of the Security Council would participate in this emergency force (UNEF); thus the U.S. and the U.S.S.R. agreed not to commit forces in the Middle East. Simultaneously, conversations were taking place on the west bank cease-fire line at Kilometer 101 (101 kilometers from Cairo) between Egyptian and Israeli military representatives, with the commander of the U.N. Truce Supervision Organization (UNTSO, in existence since 1948). These talks resulted in agreement for Egypt to send noncombat supplies to its Third Army east of the Suez Canal.

1973, November 11. Egyptian-Israeli Prisoner of War Exchange Agreement. Having reached agreement on the location of the cease-fire line, the Egyptian and Israeli military representatives at Kilometer 101 agreed upon a prisoner of war exchange. Involved were 241 Israelis and 8,031 Egyptians. Following the exchange (completed November 22) the talks broke down because of inability of the 2 sides to agree on a disengagement formula (November 29).

1973, December 21–22. First Meeting of Geneva Peace Conference. Representatives of Egypt, Israel, the U.S. and the U.S.S.R. agreed that Egyptian-Israeli discussion of separation of forces should continue in Geneva (December 26).

1974, January 18. Israeli-Egyptian Disengagement Agreement. This followed a week of intensive "shuttle diplomacy" by Secretary of State Kissinger, flying back and forth between Egypt and Israel (January 11–17). Israeli troops were to withdraw within 40 days from their bridgehead to a line 15 to 20 kilometers east of the Canal. The Egyptians would remain on the East Bank, in a zone 8 to 10 kilometers deep. A buffer zone between the 2 forces, 5 to 8 kilometers wide, would be patrolled by UNEF. This left the Israelis in control of the Gidi and Mitla passes. The Israeli withdrawal began on January 24 and was completed March 4.

1974, February 28. The U.S. and Egypt Resume Diplomatic Relations. These had been broken since June 6, 1967 (see p. 1343).

1974, February–May. Syrian-Israeli "War of Attrition." Apparently as a tactic to place pressure on Israel to make territorial concessions on the Golan Heights, Syrian forces initiated a protracted artillery and small-arms duel along the entire cease-fire line between Kuneitra and Damascus.

1974, March 18. Arabs End Oil Embargo of the U.S. Libya and Algeria refused to vote with the majority of 7 Arab oil-producing nations (see p. 1401).

1974, April-May. Intensified Palestine Guerilla Attacks. Palestine guerrillas,

attempting to place pressure on Israel, undertook a number of suicide raids across the border from Lebanon into Israel. Most notable were attacks on Qiryat Shemona (April 11) and Maalot (May 15). Israeli aircraft bombed Palestine guerrilla bases and camps in Lebanon in retaliation. Losses of life among the civilian population on both sides further inflamed Arab-Israeli hostilities.

1974, April 18. Egypt Abandons Reliance on Soviet Military Equipment. Announcing that the U.S.S.R. had failed for 6 months to honor Egyptian resupply requests, and that Soviet terms for renewed supply of arms to Egypt were "unacceptable" and an "instrument of policy leverage," President Sadat ended 18 years of Egyptian reliance upon Soviet arms deliveries.

1974, May 31. Israeli-Syrian Disengagement Agreement. After 32 days of shuttle diplomacy by Kissinger between Israel and Syria, Israel gave up all of the territory captured from Syria in the October 1973 war, plus 2 small strips taken in 1967, including the town of Kuneitra. Military forces were to be limited in zones on either side of the new cease-fire line, and a narrow buffer zone was to be patrolled by units of the UNEF.

THE KOREAN WAR, 1950–1953

Background

Korea, annexed by Japan following the Russo-Japanese War (see p. 1008), was promised its freedom by the Allies at the Cairo Conference (December 1, 1943). The decision was reaffirmed in the Potsdam Proclamation (July 26, 1945). When Japan surrendered in World War II (see p. 1309), a hurried Allied agreement (August 15, 1945) established the 38th degree of latitude as an arbitrary dividing line, north of which the U.S.S.R. would accept surrender of Japanese forces in Korea; those Japanese south of the line would surrender to U.S. troops. Following the surrender, which took place with little friction, the U.S.S.R. held the 38th parallel to be a political boundary; along it the Iron Curtain dropped.

Two years of unsuccessful attempts to reach agreement were followed by U.S. referral of the problem to the U.N., which undertook the establishment of an independent Korean government following free nationwide elections. The U.S.S.R. refused to cooperate. In the southern zone, the Republic of Korea was established (August 15, 1947), with Seoul its capital. Declaring the action illegal, the U.S.S.R. set up a puppet government—the Democratic People's Republic of Korea, its capital at Pyongyang—and organized a North Korean Army (NKA). Allegedly, Soviet troops evacuated the north (December 1948). U.S. troops completed evacuation of the south (June 1949); a small American military advisory group remained to organize a Republic of Korea (ROK) Army. More than a year of continuous bickering—Communist propaganda, raids, sabotage, terrorism, and guerrilla action—harassed the south without breaking down the ROK government.

The Opposing Forces

Communist North Korea now had a well-trained and Russian-equipped army: 130,000 men in 10 divisions with a brigade of Russian T-34 medium tanks and supporting troops. Its hard core was composed of some 25,000 veterans of the Chinese Communist campaign in Manchuria

(see p. 1424). The air force consisted of some 180 Russian Yak planes of World War II type. There were more than 100,000 trained reserves.

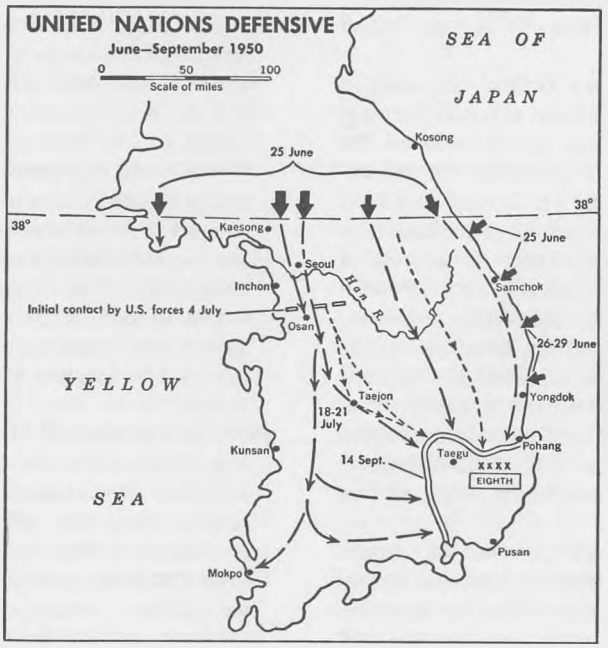
The ROK Army—little more than a national police force—consisted of about 100,000 men in 8 divisions with little supporting artillery. It lacked medium and heavy artillery, tanks, combat aircraft, and reserves.

Naval strength on both sides was negligible.

Operations, 1950

1950, June 25. Invasion. North Korean forces—7 infantry divisions, the tank brigade, and supporting troops, under Marshal **Choe Yong Gun**—crossed the border in 4 columns, driving on Seoul. Surprise was complete. The power punch, accompanied by radio broadcasts asserting it to be "national defense" against an alleged ROK "invasion," broke through the scattered resistance of elements of the 4 ROK divisions in the area. Its objective was to seize the capital and the entire South Korean peninsula, thus presenting the free world with a *fait accompli*.

1950, June 25–30. United Nations and United States Reactions. The Security Council, in emergency session (the U.S.S.R., boycotting the Council, had no representative present to veto the action), called for immediate end to hostilities and withdrawal of the NKA, asking member nations to assist. President **Harry S Truman** (June 27) ordered General MacArthur, commanding U.S. forces in the Far East, to support and cover ROK defense with air and sea forces. MacArthur effected naval blockade of the North Korean coast and furnished air support. Reconnoitering the front in person (June 28), as Seoul fell, he reported the ROK Army to be incapable of stopping the



invasion even with U.S. air support. Truman authorized use of U.S. ground troops (June 30).

MacArthur's Resources. Aside from the vessels of the U.S. Seventh Fleet and the Far East Air Force (8½ combat groups), U.S. ground forces—mostly in Japan—consisted of 4 understrength divisions organized in 2 skeleton army corps. Infantry and artillery units were each at ⅔ strength in personnel and cannon, and short of antitank weapons. Corps troops, such as medium tanks, artillery, and other supporting arms, did not exist.

1950, June 30. U.S. Forces Begin Move to Korea. The 24th Division (Major General **William F. Dean**) began movement piecemeal by sea and air into Korea; 2 more divisions were to follow.

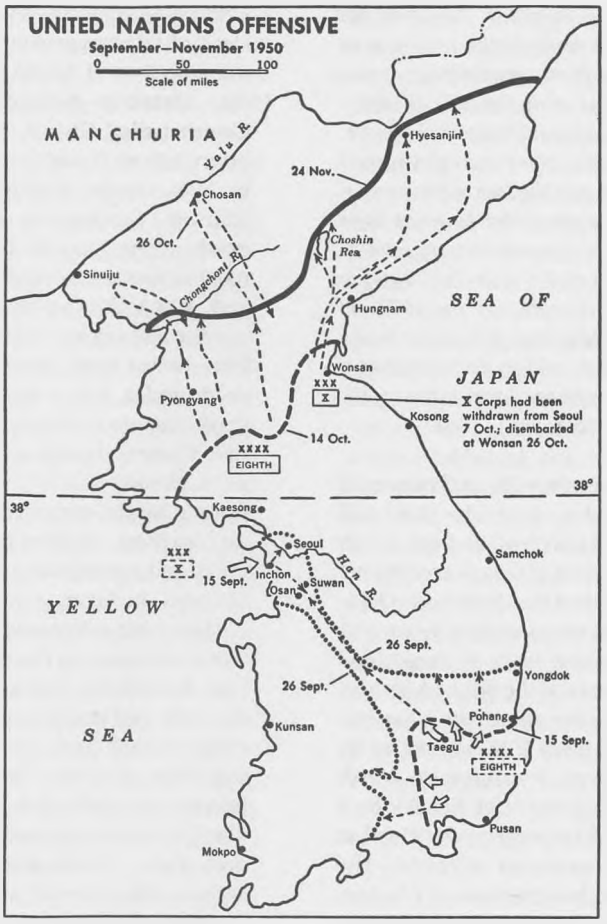
1950, July 5. Task Force Smith. One understrength battalion (2 infantry companies) with 1 battery of artillery, under Lieutenant Colonel **Charles B. Smith,** joined the ROK Army near **Osan** (July 4). Next morning an NKA division, with 30 tanks, attacked. The ROK troops fled. Task Force Smith, completely surrounded, held out for 7 hours. Then, ammunition exhausted, the survivors cut their way out, abandoning all materiel.

1950, July 6–21. Dean's Delay. Throwing in the remainder of his division as fast as the units came up, General Dean partly snubbed the NKA advance down the peninsula, trading terrain for time, while the 1st Cavalry and 25th divisions were being rushed from Japan. A 5-day action at **Taejon** (July 16–20) ended when the NKA assaulted the 24th Division from 3 directions. Dean, personally commanding his rear guard while the remainder of the division withdrew, was captured. His battered troops were relieved by the 1st Cavalry Division (July 22), while the 25th Division on its right, together with reorganized ROK divisions, slowed the NKA advance in the center and on the north.

1950, July 7. MacArthur Named Commander in Chief United Nations Command. President Truman made the appointment in response to a Security Council request that a unified command be established under a U.S. officer.

1950, August 5–September 15. The Pusan Perimeter. Lieutenant General **Walton H. Walker,** commanding what had now become U.S. Eighth Army, stablized his defense on a thinly held line extending along the Naktong River some 90 miles north from Tsushima Strait, thence east for 60 more miles to the Sea of Japan. The area embraced the southeast edge of the Korean peninsula, including Pusan, the one available port. On the north, 5 ROK divisions, re-equipped but still shaken, attempted to contain the invaders, while the western flank, where the weight of incessant NKA attacks fell, was held by U.S. troops, now including 2 additional infantry regiments and a Marine brigade. The Seventh Fleet protected both sea flanks and harassed NKA movements along the coast, while the Far East Air Force (augmented by an Australian group), together with carrier-based naval air, hammered at NKA lines of communication and furnished much-needed close support. Thanks to the advantage of interior lines, Walker was able to shift a mobile reserve from point to point within the perimeter as the NKA attacks nibbled at his front. Several penetrations of the Naktong River line and a 20-mile NKA advance in the north (August 26) were checked. Choe's forces, now estimated at 14 infantry divisions supported by several tank regiments, continued a series of uncoordinated assaults all around the perimeter. A 3-division attack on the north (September 3) necessitated committing the entire U.N. reserve (the 24th Division) north of Kyongju. Arrival of the U.K. 27th Infantry Brigade (September 14) compensated for the withdrawal of the Marine brigade for duty elsewhere (see below).

1950, September 15–25. The Inchon Landing. At dawn, the U.S. X Corps, Major General **Edward M. Almond** commanding, began landing over the difficult and treacherous beaches at Inchon, on the west coast, more than 150 miles north of the battlefront, and west of Seoul. Strategic surprise was complete, although a 2-day preliminary bombardment



had warned the few NKA detachments in and about Seoul. The 1st Marine Division swept through slight opposition, securing Kimpo airport (September 17). The 7th Infantry Division, following the Marines ashore, turned south, cutting the railroad and highway supplying the NKA in the south, and Seoul was surrounded.

1950, September 15–25. Breakout from the Perimeter. Simultaneously the Eighth Army broke out, the 1st Cavalry Division leading. Choe's NKA, its supplies cut off, and menaced from front and rear, disintegrated. The 1st Cavalry and 7th Infantry divisions met just as Seoul itself was liberated.

1950, September 26. Liberation of Seoul. More than 125,000 prisoners were taken, together with most of its matériel, as the NKA scattered into the roadless, rugged countryside.

COMMENT. *The Inchon landing was one of the great strategic strokes of history, in conception, execution, and results. MacArthur's genius had transformed into a stunning victory a desperate defense seemingly doomed to disaster. The Communist grab at South Korea, which if successful might have meant the eventual absorption of all the Asian mainland, had been thwarted, the North Korean Army crushed. MacArthur's decision was taken while his Eighth Army was still clawing to maintain a toehold at Pusan. On August 12 his staff was ordered to prepare the operation, 1 month to accomplish what ordinarily would*

take several. His dynamic insistence overcame the doubts of the U.S. JCS (technically the Inchon area was most disadvantageous for an amphibious operation) and he was provided with the bulk of the 1 division of Marines he demanded. (One of its brigades, already there, came from his own Pusan perimeter.) The 7th Infantry Division was the last of his occupation troops in Japan, its ranks filled by more than 5,000 ROK soldiers hurried to Japan to train with it. Success depended on (a) the ability of the U.S. Navy to provide sufficient water transport, (b) the ability of Walker's hard-pressed Eighth Army to hold the Pusan perimeter until the stroke fell, and (c) perfect timing of the assault (a 30-foot tide variance permitted use of the beaches for only 6 of each 24 hours.)

1950, October 1–November 24. Advance to the Yalu. As directed by both the U.N. and President Truman, MacArthur pushed north across the 38th parallel. ROK troops crossed the line (October 1); Eighth Army followed (October 9), leaving 2 divisions in the southern area to secure communication lines to Pusan and mop up roving remnants of the NKA. A serious military handicap was the injunction that under no circumstances were U.N. aircraft to fly north of the Yalu River. **Pyongyang,** North Korean capital, was overrun (October 20) by a combined airborne (187th Regimental Combat Team) landing and overland advance. The ROK 6th Division reached the Yalu at Chosan, and other ROK units fanned out behind it. By this time, other U.N. token forces had joined Eighth Army and were integrated in existing U.S. divisional elements: a Turkish brigade, and Canadian, Australian, Philippine, Netherland and Thai battalions.

1950, October 15. Wake Island Conference. President Truman and General MacArthur conferred at Wake Island on the course of the war. This later became an issue in the Senate investigation that followed the relief of General MacArthur (see p. 1361).

1950, October 16–26. Shift of U.S. X Corps to the East Coast. Embarked at Inchon, the corps was moved around to the east coast to Wonsan (October 19), which had already been captured by the ROK I Corps. A 7-day delay in landing was necessary to sweep the harbor clear of latest-type Soviet mines, sown under the direction of Soviet experts with the NKA.

1950, October–November. Threats from Communist China. Peking had threatened intervention should the 38th parallel be crossed by U.N. troops, and heavy concentrations of Chinese Communist troops were reported north of the Yalu, in Manchuria. Since aerial reconnaissance beyond the Yalu was prohibited, MacArthur knew neither the full strength nor the dispositions of these troops, nor—until his forward ROK divisions were ambushed by them and a U.S. regiment at Unsan was severely mauled (November 1)—was he aware that Chinese troops in considerable numbers were already south of the Yalu. Walker, confronted by the presence of this new element in the situation, recalled his leading Eighth Army units and consolidated temporarily along the Chongchon River.

MacArthur's Plans and Problems. His intention was to advance up the entire front of the peninsula, X Corps on the east coast, Eighth Army on the west, and make a sweeping envelopment. X Corps would turn west on reaching the Yalu and drive all enemy forces south of the border into the arms of Eighth Army. Since the rugged, desolate central massif precluded mutual support, these forces acted independently, their control and coordination directed by MacArthur in Tokyo. Almond's X Corps now consisted of the U.S. 1st Marine and 3rd and 7th divisions and the ROK I Corps (3rd and Capital divisions). The Eighth Army, 9 divisions strong, was grouped in 3 army corps: the U.S. I and IX and the ROK II, from left to right. The total combat strength of the entire command was about 200,000 men, with perhaps, 150,000 more in support functions in the rear. In addition to the ROK corps, some 21,000 more Korean troops were attached to or integrated in U.S. units.

MacArthur had believed that Communist China was bluffing; that she would not enter the conflict unless Manchuria itself were invaded. He had expressed this opinion to Truman at Wake Island (see above). The U.S. Cen-

tral Intelligence Agency was of the same opinion. Yet now Red Chinese troops were in Korea. MacArthur considered that to suspend his advance would be a violation of his directive: "to destroy the North Korean armed forces." Aerial reconnaissance north of the Yalu being still prohibited, he decided the only remaining course was to clarify the situation by a bold advance. The decision was specifically approved by the JCS. Meanwhile, the X Corps had thrust north widely distributed over an immense front; the ROK Capital Division had reached Chongjin on the coast; the U.S. 7th Division was on the Yalu at Hyesanjin.

1950, November 24. Eighth Army Advance. MacArthur's "reconnaissance in force" began.

1950, November 25–26. Chinese Communist Counteroffensive. After advancing for 24 hours against practically no opposition, the Eighth Army was suddenly struck a massive blow, the main effort being directed against the U.N. force's right flank. Some 180,000 Chinese troops, in 18 divisions, shattered and ripped through the ROK II Corps, hit the U.S. 2nd Division on the right flank of IX Corps, and threatened envelopment of the entire Eighth Army. The 2nd Division, attempting to refuse its right flank, fell into an ambush at **Kunu-ri** as the Chinese envelopment trapped its columns while passing through a defile in march order. Some 4,000 men and most of the divisional artillery were lost while trying to fight their way out. Walker threw in his reserves, the U.S. 1st Cavalry Division and the Turkish and 27th Commonwealth brigades. They staved off the envelopment, the Turks in particular taking heavy losses, and the Eighth Army managed to disengage in comparatively good order. By December 5, the Eighth Army, its right flank refused, had completely extricated itself, and the Communist drive was beginning to lose momentum; but the central and east-coast area being wide open (see below), a stronger defensive position was essential. Walker accordingly withdrew to the general line of the 38th parallel, slightly north of Seoul and some 130 miles below the November 24 situation. There, as the year ended, the Eighth Army awaited a new Communist offensive.

1950, November 27-December 9. X Corps Withdrawal. In the eastern zone, an additional 120,000 Chinese troops, advancing on both sides of the Chosin reservoir, isolated the 1st Marine Division and drove in elements of the 3rd and 7th divisions. The ROK troops on the coastal flank were hurriedly withdrawn on Almond's order without much molestation. MacArthur ordered evacuation of the entire force, since the Communist drive, directed on the ports of Hungnam and Wonsan, threatened its piecemeal destruction. Navy transports were rushed to both ports. Defensive perimeters were established, manned by elements of the 3rd and 7th divisions, while the 1st Marine Division, under Major General **Oliver Smith,** consolidated south of the Chosin reservoir in subzero weather. Surrounded by 8 Communist divisions, General Smith, announcing to his troops that they were not retreating, but "attacking in another direction," moved southeast on Hungnam, supplied by the Far East Air Force. When a Communist blow destroyed the 1 bridge across a gorge otherwise impassable for the division's trucks and tanks, bridging material was flown in by air and the Marine southward "advance" continued. Thirteen days of running fight ended (December 9) when a relief column of 3rd Division troops met the Marine vanguard outside the Hungnam perimeter.

1950, December 5–15. X Corps Evacuation. Despite continued Communist attacks on the perimeters of both ports, evacuation by air and by sea went smoothly. Air Force and Navy carrier-plane support, together with naval gunfire, facilitated the final embarkation. In all, 105,000 ROK and U.S. troops were lifted by the Navy, together with 98,000 civilian refugees. Some 350,000 tons of cargo and 17,500 vehicles were also carried. The Far East Air Force evacuated 3,600 troops, 200 vehicles, and 1,300 tons of cargo. On arrival at Pusan, the X Corps came under Eighth Army control as a strategical reserve.

1950, December 23–26. Death of Walker; Arrival of Ridgway. Walker, killed in an

automobile accident, was replaced by Lieutenant General **Matthew B. Ridgway.** MacArthur gave Ridgway command of all ground operations in Korea, retaining over all ground, air, and sea command.

COMMENT. *The U.N. forces in Korea had suffered a serious defeat, though disaster was averted through skillful troop leading and stubborn—in some cases phenomenal—resistance. MacArthur's critics were quick to blame his simultaneous advance in 2 independent zones on 1 front, and the inadequate security measures which had permitted the stunning surprise. His supporters, in rebuttal, pointed to the nature of the terrain, which rendered close ground liaison and mutual support between Eighth Army and X Corps impossible. They also blamed the artificial ground rules set up by the U.N. and the JCS prior to the Communist assault prohibiting aerial reconnaissance north of the Yalu. To add to MacArthur's problems, he had been denied his immediate request that he be now permitted to bomb the Yalu bridges and also the important North Korean entry port of Rachin, only 35 miles from Vladivostok, through which Soviet war materiel had long flowed freely to the NKA. Bombing of the southern ends of the Yalu bridges was finally permitted; this was an extremely hazardous and practically futile operation, since to approach them U.N. aircraft had to fly parallel to the river, exposed to antiaircraft fire from Manchuria and to the assaults of Communist attack planes. Communist traffic over the bridges was little interrupted.*

It would appear that MacArthur's original decision to advance—a decision concurred in by the JCS—was proper. But the method may be criticized. The JCS must take much blame for permitting the advance while prohibiting the prior air reconnaissance that was essential. There is no doubt that MacArthur expected that, should the Chinese Communist threat materialize, he would immediately be given full authority to extend his air operations over the border and choke the assault at its source, but the JCS had no intention of giving such authority. Finally, the actual local security measures taken just before and during the Eighth Army's move were inadequate under the circumstances. For this both MacArthur and Walker must share blame.

The most important lesson from this defeat was the necessity that U.N. troops relearn the rudiments of fire and movement on foot. Roadbound, they had found themselves too dependent upon supporting tanks, artillery, or aircraft. The Chinese troops, on the other hand, lightly equipped, utilized fluidity, surprise, and concealment in the rugged regions to compensate for their inferiority in firepower. They moved and attacked by night; lay camouflaged in daylight. Their attacks all followed the same pattern: infiltration, encirclement, and ambush. Frontal assaults were in effect holding attacks in small force, but the penetrations were deep. Each engagement was initially one of small units. It was a platoon commander's war. At no time was the U.N. able to employ its firepower superiority in full force.

Operations, 1951

1951, January 1–15. Second Communist Invasion. Long prepared and expected, the Communist assault crossed the 38th parallel at daybreak, its main effort in the western zone. Some 400,000 Chinese troops, with an additional 100,000 of the reconstituted NKA, pushed the 200,000-man Eighth Army back almost to Seoul. Then (January 3) a heavy penetration farther east, in the Chungpyong reservoir area, overran the ROK divisions on both flanks of the U.S. 2nd Division, which extricated itself only after serious fighting and the commitment of Ridgway's reserve—the 3rd and 7th divisions.

1951, January 4. Evacuation of Seoul. This was the third time the capital had changed hands. Stubborn resistance of ground troops, plus the Far East Air Force's close support and interdiction of the now exposed Communist lines of communications, slowly checked the momentum of the drive. The U.N. position stabilized some 50 miles south of the 38th parallel, from Pyongtaek on the west coast to Samchok on the east (January 15).

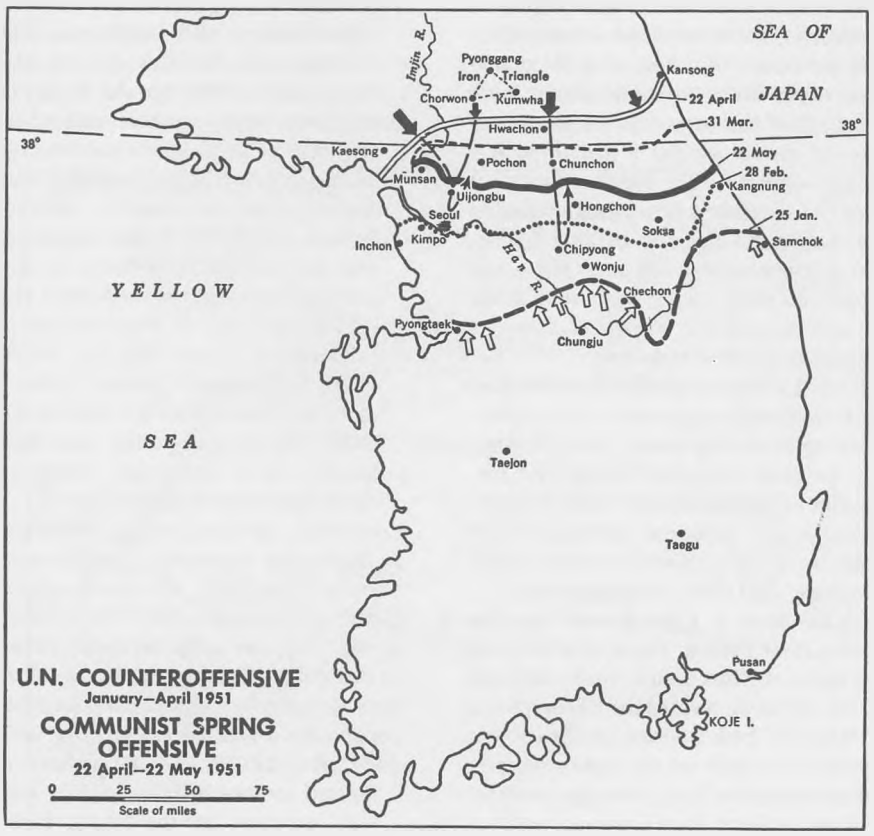
1951, January 25–February 10. U.N. Counteroffensive. Ridgway launched a series of limited-objective attacks, slowly driving north. A Communist counterattack near **Chipyong** and **Wonju** (February 11–18) checked the advance in the center, but on the west U.N. troops reached the outskirts of Seoul.

1951, March 7–31. Operation "Ripper." This was designed primarily to inflict casualties on the enemy, and secondarily to relieve Seoul and eliminate a large Communist supply base now built up at Chunchon. The main effort, in the center, forced the Communists back. The Han River was crossed east of Seoul.

1951, March 14. Reoccupation of Seoul. Patrols of the I Corps found it abandoned. Chinese resistance then stiffened, but an airborne drop by a reinforced regiment (187th Regimental Combat Team) at **Munsan,** 25 miles north of Seoul (March 23), forced a general Communist retirement. The Eighth Army was back roughly along the old 38th-parallel front (March 31). MacArthur and Ridgway decided on further advance, toward the "Iron Triangle"—Chorwan-Kumhwa-Pyonggang, the major assembly and supply area, as well as communications center, for the Chinese.

1951, April 11. MacArthur Relieved. President Truman summarily ousted General MacArthur from his dual command of U.N. forces and of U.S. forces in the Far East. Ridgway was appointed in his place, and Lieutenant General James A. Van Fleet was hurried from the U.S. to command the Eighth Army.

COMMENT. *The President was exercising his legal prerogative as Commander in Chief. MacArthur was not in sympathy with the policy of limiting the war to the Korean peninsula and had not attempted to conceal his dissatisfaction with the restrictions placed on his operations. MacArthur had stated that "in war there is no substitute for victory" in a letter (March 20) to Representative* **Joseph W. Martin, Jr.** *(R., Mass.), which Martin promptly made public. Mac-*



Arthur was advocating neither the use of the atom bomb nor a land invasion of China. He did want to destroy, by conventional air attack, bases in Manchuria which were being used as springboards for invasion of Korea. He did urge the use of Chinese Nationalist troops in Korea, and also the "unleashing" of Chiang Kai-shek on the Chinese mainland. He believed that the Soviet Union could not afford to risk war by coming to the aid of Red China, but that if it did make such a mistake there could be no better time for the U.S. to face a showdown with the Kremlin. Without consulting Washington, he had called on the Chinese commander in Korea to surrender (March 25) and hinted that air and naval attacks against Communist China would be the probable consequence if the conflict continued.

To Truman such opinion and actions were anathema. MacArthur was defying presidential authority and debating national policy. The United States—listening to an anxious Free World opinion frightened by Soviet possession of the atomic bomb—had deliberately given up the idea of liberating all of Korea and was seeking merely to restore the status quo *in South Korea. So MacArthur had to go. The brusqueness of the ousting—the general learned it first through a news broadcast—offended many people. MacArthur returned to the U.S. to receive a hero's welcome and an invitation to address the Congress in joint session, which he did. A Senate investigation later (May–June 1951) aired all the policy issues; the results of the investigation were inconclusive; in general, however, U.S. policy became tougher subsequently.*

1951, April 12–21. Continued U.N. Advance. Aware of Communist preparations for a counteroffensive to blunt the threat to their "Iron Triangle," General Van Fleet continued forward movement, prepared to fall back, if necessary, to previously prepared defensive positions. There he would contain the enemy by his heavy firepower and then counterattack.

1951, April 22–May 1. Communist Spring Offensive—First Phase. The attack came on a moonlit night; the first assault broke through the ROK 6th Division, west of the Chungpyong reservoir. The U.S. 24th Division on the left and the 1st Marine Division on the right promptly refused their respective flanks, but the penetration compromised Van Fleet's general position and he began withdrawal of his left—the I and IX Corps. The Chinese main effort developed against the I Corps, north of Seoul. Hasty withdrawal by the ROK 1st Division exposed the flank of the U.K. 29th Brigade on its right and a battalion of the Gloucestershire Regiment was cut off. After a heroic defense of their hill position, the survivors attacked *north*, to the momentary confusion of their assailants. Some 40 men escaped; the remainder were killed or captured. As usual, the Communist assault finally lost momentum and came to a pause (April 30). They broke contact, retiring in general beyond U.N. artillery range. Communist losses in this phase were at least 70,000 men, while Eighth Army casualties were about 7,000.

1951, May 14–20. Second Phase of Communist Offensive. Shifting the weight of their attack to the east, more than 20 divisions, with NKA divisions on their right and left, struck the right elements of X Corps—the ROK 5th and 7th Divisions. The U.S. 2nd Division, next on the left, stood firm, but the ROK III Corps, farther east, went to pieces under heavy assault. The ROK I Corps, on the extreme right, refused its flank against the Communist surge through this wide corridor. The U.S. 2nd Division (with French and Netherlands battalions attached) and the 1st Marine Division, on the west side, promptly counterattacked. Van Fleet had expected the blow in this area and had already shifted his reserves—the U.S. 3rd Division and 187th Regimental Combat Team. Their combined efforts snubbed the Communist offensive (May 20). Attacks on the west flank, north of Seoul, and in the center, down the Pukhon River, had been repulsed.

COMMENT. *As usual, initial Communist contact was by small units, attempting to infiltrate and terrorize. There were few tanks. The attacks, vigorous at night, ceased with daylight when U.N. artillery and tactical aircraft firepower could intervene. Communist losses in this 7-day phase were estimated at 90,000. They were now overextended, supplies expended and communications under continuous aerial attack.*

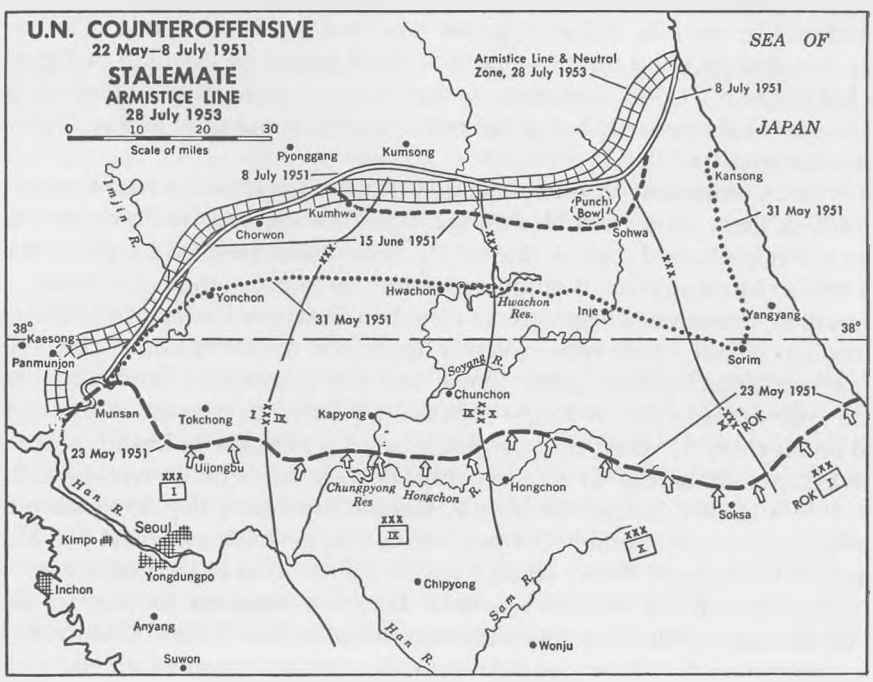
1951, May 22–31. U.N. Offensive. Preceded by limited attacks on the far left, anchoring the U.N. position on the Imjim River, north of

Munsan, the entire U.N. front moved north. The ROK Capital and 2nd divisions, on the extreme right, flashed up the east coast with little opposition, reaching Kansong. Advance was slower in the center, but was accelerating by month's end. Van Fleet was now ordered to halt. Despite his plea for approval of "hot pursuit" against an enemy on the verge of collapse, the JCS refused either increased means or permission for another drive northward. The U.S. government was concerned by Soviet threats and by consequent alarm elsewhere in the Free World. It was decided to do nothing to risk World War III.

1951, June 1–15. Consolidation of U.N. Position. With the rainy season on, Van Fleet decided to establish a defensive belt across Korea, from which springboard he could keep the enemy off balance by a succession of JCS-approved limited-objective moves. Some gains were made at the base of the "Iron Triangle"—thus denying its use to the enemy—and on the southern rim of the "Punchbowl," a fortified hill-circle northwest of Sohwa. Meanwhile, the Communists were themselves organizing in depth to the north.

1951, June 23. Soviet Cease-Fire Proposal. This was made in the U.N. by Soviet Ambassador Malik. It confirmed that the Chinese had been badly hurt in the previous 6 months' fighting. Estimated enemy losses totaled 200,000 men, together with much matériel. Also, U.N. air attacks had foiled every attempt to install Communist air bases south of the Yalu. Delegations from both sides met at Kaesong.

1951, July–August. Negotiations. The Communists, taking advantage of the location of Kaesong just inside their lines, seized every opportunity to insult U.N. negotiators and to delay progress while playing for time to recuperate from their mauling. They used the negotiations as a sounding board for propaganda against the U.N. allies and the U.S. in particular. Meanwhile, clashes between patrols and outposts continued all along the firing line as both sides improved their positions. The Eighth Army improved its hold both on the



Iron Triangle and the Punchbowl. The negotiations broke down completely (late August).

1951, August–November. Resumption of U.N. Limited Attacks. Van Fleet's troops cleared the Iron Triangle and the Punchbowl, driving the Chinese back from the Hwachon reservoir and the Chorwan-Seoul railway line. These successes brought prompt Communist requests for resumption of armistice discussions.

1951, November 12. Discussions Begin at Panmunjon. This was a village between the lines in No Man's Land. General Ridgway (November 12) ordered offensive operations stopped, and Eighth Army went on a highly active defense.

Operations, 1952

While negotiations dragged out interminably at Panmunjon, minor actions flared continually all along the front. General Ridgway, ordered to NATO command (see p. 1372), was replaced (May) by General **Mark W. Clark.** The Communists continued building up their strength. By the year's end an estimated 800,000 Communist ground troops—¾ of them Chinese—were in Korea, while heavy shipments of Soviet artillery were brought in, including excellent antiaircraft guns, radar-controlled. However, U.N. command of the air was never seriously threatened, and the Communists were forced to continue their practice of taking shelter during daylight hours in concealed, deep-dug bunkers and other underground installations.

Prisoners of War. Communist wranglings at the Panmunjon conferences centered on the disposition of prisoners of war. About 92,000 U.N. troops had fallen into Communist hands: some 10,000 Americans, 80,000 Koreans, and 2,500 from other U.N. forces. Statistical computation is impossible; no one will ever know how many prisoners died of mistreatment or starvation. Communist boats in 1951 put their POW bag at 65,000, but at Panmunjon they admitted holding only 11,500. Consensus of reports by returned POWs indicated that about ⅔ of U.S. prisoners died or were killed in the prison camps. No neutral or Red Cross inspections were ever permitted.

Some 171,000 Communist prisoners fell into U.N. hands, more than 20,000 of them Chinese. About 80,000 of them were assembled on the island of Koje, just off Pusan, where they were held under rather haphazard control, due to U.S. anxiety about our own captives in Communist hands, as well as humanitarian, if misguided, efforts to improve their conditions.

At Panmunjon, Communist negotiators insisted on total repatriation of all POWs, but at least 50,000 prisoners in U.N. hands were violently opposed to returning home. The U.N. command had no intention of forcing these unfortunates back into Communist hands. A deliberate buildup of hard-core Communists at Koje—organizers planted to become POWs—produced an organized revolt (May 7) when U.S. Brigadier General **Francis T. Dodd,** naïve camp commander, was captured through a ruse and held as hostage inside his own prison compound. His successor, U.S. Brigadier General **Charles F. Colson,** unwitting that he was abetting a Communist propaganda coup, bartered for Dodd's release by promising in effect that alleged abuses in treatment of Communist POWs (abuses which did not exist in fact) would be "corrected." General Clark ordered U.S. Brigadier General **Haydon Boatner** to clear up the situation. Boatner, combining military firmness with knowledge of the Chinese Communist mentality, swept the Communist hard-core recalcitrants into a separate compound and restored order.

All this while, a dreary succession of attacks and counterattacks—in reality tests of willpower—cost both sides great losses in flesh and blood. In October, the negotiations at Panmunjon again broke off, while the war became a political football in the U.S. presidential election. The American people, tired of the struggle, elected **Dwight D. Eisenhower,** who had promised to bring about an honorable conclusion.

Operations, 1953

1953, March 28. Communist Move for Peace. Unexpectedly, but apparently in tune with internal unrest in the Communist world following Stalin's death (March 5), Premier **Kim Il Sung** of North Korea and General **P'eng Teh-huai,** heading the Chinese "volunteers," informed General Clark of their agreement to his previously ignored proposal for mutual exchange of sick and wounded POWs. They also urged resumption of the Panmunjon conferences. Unquestionably, indications of extensive U.S. plans to renew offensive operations, and possibly to extend the war, were major factors in the Communist gambit.

1953, April. Operation "Little Switch." This was an exchange of 5,800 Communists for 471 ROKs, 149 Americans, and 64 other U.N. personnel.

1953, May–June. South Korean Intransigence. South Korea's President **Syngman Rhee** flatly refused to become a party to any agreement which left Korea divided. After Communist attacks against his troops (see below), he demanded resumption of the military offensive (June 18). At the same time he released from his own prison camps 27,000 North Korean POWs unwilling to be repatriated.

1953, June 10–31. Chinese Communist Offensive. Massive attacks, mostly against ROK troops, were begun, obviously to bring about U.S. pressure on Syngman Rhee. When he released the prisoners, the Communists, accusing the U.N. of bad faith, again broke off negotiations and launched still another offensive (June 25), against the ROK sector. Some slight gains were made, but quick shifts of U.S. reinforcements and the usual Chinese inability to exploit their penetrations brought the attack to a halt, with loss of some 70,000 troops.

1953, July 10. Resumption of Negotiations. Following U.N. assurance to the Communists that no further ROK intransigence would occur, the negotiators hammered out a final armistice.

1953, July 27. Armistice Signed. The *de facto* boundary was the existing battle line. Exchange of prisoners who desired repatriation followed: 77,000 Communists, against 12,700 U.N. men—of whom 3,597 were Americans and 945 Britons.

Summary

The Korean War cost the U.N. 118,515 men killed and 264,591 wounded; 92,987 were captured. (A great majority of these died of mistreatment or starvation.) The Communist armies suffered at least 1,600,000 battle casualties, 60 percent of them Chinese. An additional estimated 400,000 Communists were nonbattle casualties. US casualties were 33,629 killed and 103,284 wounded (see Statistical Summary). Of 10,218 Americans who fell into Communist hands, only 3,746 returned; the remainder (except 21 men who refused repatriation) either were murdered or died. In all, 357 U.N. soldiers refused repatriation. South Korea's toll—which can only be estimated—came to 70,000 killed, 150,000 wounded, and 80,000 captured. Approximately 3 million South Korean civilians died from causes directly attributable to the war.

This war was significant on several counts. It was the first major struggle of the nuclear age. While no nuclear weapons were employed, the threat of the atom bomb hung heavy over all concerned and throttled exploitation of success.

It was a war between 2 differing ideologies, a war of stratagem and deceit in which road-bound superior firepower was canceled out by lighter-armed fluidity over desolate, trackless wastes. All ethical standards of western civilization were scorned by the Communists.

Statistical Summary: U.S. Forces in the Korean War, 1950–1953

	Total U.S. Forces Worldwide	*Maximum Deployed Strength*	*Total Combat Casualties*	*Killed and Died of Wounds*	*Wounded*	*Prisoner or Missing*	*Nonbattle Deaths*
Total	5,764,143	c. 440,000 (Apr–Jul '53)	147,131	33,629	103,284	10,218	20,617
Army	2,834,000	276,581 (July '53)	113,610	27,704	77,596	8,310	9,429
Navy	1,177,000	84,124 (Feb '53)	2,243	458	1,576	209	4,043
Marines	424,000	36,966 (Apr '53)	28,627	4,267	23,744	616	1,261
Air Force	1,285,000	46,388 (Dec '52)	2,651	1,200	368	1,083	5,884

U.N. Participation. Fourteen U.N. member nations besides the U.S. took part in this, the first war in which the U.N. had engaged. Britain and Turkey each contributed a brigade (each about 1/3 of a division). In addition, the U.K. furnished 1 aircraft carrier, 2 cruisers, and 8 destroyers, with marine and supporting units. Canada sent 1 brigade of infantry, 1 artillery group, 1 armored battalion; Australia, 2 infantry battalions, 1 each air fighter and transport squadrons, 1 aircraft carrier, 2 destroyers, 1 frigate; Thailand, 1 regimental combat team; France, 1 infantry battalion, 1 gunboat; Greece, 1 infantry battalion, 1 air transport squadron; New Zealand, 1 artillery group, 2 frigates; Netherlands, 1 infantry battalion, 1 destroyer; Colombia, 1 infantry battalion, 1 frigate; Belgium and Ethiopia, 1 infantry battalion each; Luxembourg, 1 infantry company; Union of South Africa, 1 fighter squadron. (Ground units from the British Commonwealth were combined into a Commonwealth Division.) All these elements, though merely token forces, bore themselves well and sustained heavy casualties. In addition, from Denmark, India, Italy, Norway, and Sweden came hospital or field-ambulance noncombat units.

Air Warfare. The conflict reaffirmed the critical importance of air power as an essential ingredient of successful combat; it also was a reminder that air power alone can neither assure adequate ground reconnaissance nor bring about final decision in land warfare. The immediate superiority achieved by the U.N. in the air necessitated bringing in Soviet Mig-15s—then the latest U.S.S.R. jet fighters, quite superior to America's F-84 and surpassing in some respects the F-86. Migs, first seen in Korea in late 1950, increased in number during 1951, but the training and competence of U.N. pilots—mostly American—compensated for any inferiority in matériel. While U.N. pilots were never permitted to hound the Migs across the Yalu in "hot pursuit," they were able to neutralize all Communist efforts to establish bases south of the river. In air-to-air combat, 1,108 Communist planes were destroyed, including 838 Mig-15s; probably destroyed were another 177 and severely damaged were an additional 1,027 planes, against a total U.N. loss of 114 aircraft. As the war drew to a close, U.S. F-86 jets were downing Mig-15s at the rate of 13 confirmed Communist losses to each F-86 shot down. U.N. plane losses to

Communist antiaircraft fire—while giving magnificent close support to ground troops—were 1,213.

The Helicopter. The potential of this new means of mobile transportation was clearly demonstrated. It was excellent for reconnaissance, evacuation, and rescue work.

The Navy's Role. American command of the sea was one of the principal handicaps to Communist success. Without this, the U.N. campaign in aid of South Korea would have been impossible. The U.S. Seventh Fleet gave valuable gunfire support along the coast and carried out amphibious operations, while naval and Marine air units participated in Air Force interdiction and close support to ground units. The Navy's blockade of the peninsula prevented any attempts to supply the Communist forces by water. Had it been possible to interdict ground-supply channels from Manchuria and Siberia in similar fashion, the war would have been over in short order.

Brainwashing. Not until the U.N. POWs returned home was the full extent of the Communist ideological warfare realized. Through brutality—physical and psychological torture (some 60 percent of American and British POW's died from torture or neglect)—many men unraveled. About 15 percent of Americans in captivity actively collaborated with the enemy; only about 5 percent of the total resisted categorically all Communist indoctrination and all efforts to use them for propaganda purposes. Consensus in the U.S. and Britain was that their soldiers had been mentally unprepared for such treatment.

INTERNATIONAL PEACEKEEPING

The United Nations

The U.N. Charter, formally ratified by 29 nations, came into force (October 24, 1945; the U.N. was later located in New York), composed of a General Assembly and an elected Security Council of 12, whose 5 permanent members were China, France, Great Britain, the U.S.S.R., and the U.S. Disarmament activities of the U.N. are treated separately below. Important highlights of its other activities during the period were:

1946, April 18. End of League of Nations. The League voted itself out of existence, transferring assets and responsibilities to the U.N.

1946, December 19. Greek Frontiers. A commission was established to investigate violations of the Greek frontiers with Albania, Yugoslavia, and Bulgaria (see p. 1388). A special commission was later established to observe the northern frontier of Greece (October 21, 1947).

1947, May 15. Palestine. A special commission was established to investigate the problem of Palestine (see p. 1392). This led to a plan for establishment of separate independent Jewish and Arab states, approved by the General Assembly (November 29, 1947).

1947, August 26. Indonesia. A Good Offices Commission was appointed to seek peaceful settlement of the war in Indonesia (see p. 1421).

1948, January 20. Jammu and Kashmir. Attempt was initiated to settle the India-Pakistan dispute by a U.N. mediation commission (see p. 1404).

1948, April 23. Palestine Truce Commission. This was established, after outbreak of Arab-Israeli war (see p. 1334), under the leadership of Count **Folke Bernadotte** of Sweden. An

international Palestine U.N. Mediation and Observer Group was later created under Bernadotte's command (May 14). Soon after, Bernadotte was assassinated by Jewish terrorists (see p. 1338).

1948, October 25. Soviet Veto on Berlin. This blocked settlement by the Security Council of the Berlin Blockade (see p. 1378).

1948, December 11. Conciliation Commission for Palestine Established.

1948, December 12. Korea. The General Assembly appointed a commission to aid unification of Korea (see p. 1354).

1949, January 7. Israeli-Arab Armistice. (See p. 1339.) Supervision arrangements were made by the Security Council.

1949, January 28. Indonesia. The Security Council renewed efforts to halt hostilities and settle the Indonesian question; the Good Offices Commission (see p. 1421) was reconstituted as the U.N. Commission for Indonesia.

1950, January 3–August 15. Soviet Boycott. The U.S.S.R. boycotted all U.N. bodies on which Nationalist China was represented.

1950, June 27. Korean War. The Security Council voted 7-1 (Russia absent) to assist South Korea in repelling North Korean aggression (see p. 1355).

1950, September 14. U.N. Denounces North Korean Aggression. This was in a report by the Commission on Korea to the General Assembly.

1951, February 1. Communist China Named Aggressor in Korea. This was by General Assembly vote. Later the Assembly voted an embargo on arms to China (May 8).

1953, April 23. Investigation of Germ-Warfare Charges. The General Assembly adopted by a vote of 51-5 a resolution for impartial investigation of Communist charges that the United States had used germ warfare in Korea.

1953, November 11. U.S. Charges Communist Atrocities in Korea. A U.S. report to the General Assembly charged that at least 6,113 U.S. servicemen and a total of 11,622 U.N. servicemen had been murdered, tortured, or otherwise mistreated.

1954. Egyptian Blockade of Israel. U.S.S.R. vetoed a resolution in the U.N. Security Council to call on Egypt to end restrictions on passage through the Suez Canal of ships bound for Israel.

1955, September 29. Algeria. By 1 vote the General Assembly voted to investigate conditions in Algeria. France withdrew (September 30), but later returned to the Assembly (November 25).

1955, October 12. General Assembly Condemns South Africa's Racial Segregation. South Africa then withdrew from the General Assembly (November 9).

1956, April, July. Hammarskjöld to Middle East. On trips to the tense Middle East at request of Security Council, he attempted to calm down tempers and obtain cease-fire agreements from Israel and Arabs.

1956, October 28. Hungary Crisis. (See p. 1384.)

1956, October 29. Suez Crisis. (See p. 1340.)

1956, November 4–7. U.N. Emergency Force. At Egypt's request, following Israel's Sinai offensive and the abortive Anglo-French invasion of the Suez Canal area (see p. 1342), the Security Council sent a force of 6,000 men, selected from 10 nations, to supervise cessation of hostilities, protect Egyptian borders, and place a cordon sanitaire across the Negev, separating Israeli and Egyptian forces. The first units arrived in a few days (November 15).

1957, September 14. Soviet Intervention in Hungary Condemned. This was a General Assembly vote.

1958, June 11. Observer Teams for Lebanon and Jordan. (See pp. 1397, 1399.) These peace-preservation teams facilitated the withdrawal of U.S. and British troops (August 21).

1959, June 20. Korea. The U.N. command in Korea charged North Korea with violating the armistice by building military fortifications in the demilitarized zone.

1959, December 1. Antarctic Treaty. A 12-nation treaty established the continent of Antarctica as being available only for peaceful purposes.

1960, July 14. Establishment of Force for

Congo. The Security Council authorized the Secretary General to organize an *ad hoc* military force to help the Congolese government preserve order. These were mainly drafted from African nations into the Congo, under Swedish Major General **Karl Von Horn,** to preserve peace. Some 18,000 strong at its peak, this force actually battled dissident elements (see p. 1441) in hope of bringing about a peaceful settlement of the Congo question. The last U.N. troops left the Congo June 30, 1964, upon which rebellion flared again (see p. 1442).

1961, September 17. Death of Dag Hammarskjöld. The U.N. Secretary General was killed in a plane crash in nearby Northern Rhodesia as he was coming in to land at the airport at Elizabethville, Congo.

1962, September 21. West Irian. A security force was established to supervise transfer of western New Guinea from the Netherlands to Indonesia (see p. 1422).

1963, June 1. U.N. Observer Force for Yemen. (See p. 1402.) This force of 200 observers was established by the Security Council, initially for 2 months, under Swedish Major General **Karl von Horn.** Soon after the force's life was extended (August 1), von Horn resigned, citing lack of U.S. support and poor administration. He was replaced by Indian Lieutenant General **Prem Singh Gyani** (August 27).

1964, March 4. Cyprus. Establishment of a U.N. force (see p. 1390). A cease-fire was later obtained through U.N. efforts (August 11).

1964, July 3. U.N. Observation Mission in Yemen Extended. Secretary General U Thant announced that the extension to September 4 would facilitate negotiations for mutual withdrawal by the UAR and Saudi Arabia.

1967, May 18. U Thant Agrees to Withdrawal of UNEF from Sinai. (See p. 1343.)

1967, July 10. U.N. Observers Agreed for Suez Canal Cease-Fire Supervision. (See p. 1345.)

1973, October 27. UNEF Reestablished in Sinai. (See p. 1353.)

1974, May 31. UN Force Established on Golan Heights. (See p. 1354.) This was designated UN Disengagement Observer Force (UNDOF).

Disarmament Activities

1945, November 15. U.S., Britain, and Canada Offer Atomic Information to U.N. President Harry S. Truman, Prime Minister **Clement Attlee,** and Prime Minister **Mackenzie King** offered to share information on atomic energy with other members of the U.N.

1946, June 14. Baruch Plan. At the first meeting of the U.N. Atomic Energy Commission, the U.S. delegate, **Bernard Baruch,** offered a plan whereby the United States would give up its store of atomic bombs and reveal its secrets of controlling atomic energy to an international Atomic Energy Development Authority. There could be no veto power in this international authority.

1946, June 19. Soviet Alternative Plan. The Soviet representative submitted an alternative plan to outlaw all atomic bombs, and insisted on the retention of the veto by the Big-Five Powers in all atomic matters. All atomic weapons would be destroyed within 3 months of ratification of an international agreement. Shortly after this (July 24), the Soviet Union rejected the Baruch Plan. The Russian representative, **Andrei Gromyko,** announced that Russia would not permit any form of inspection of atomic-energy projects within her borders.

1946, December 14. Resolution for Worldwide Disarmament. Adopted by acclamation by the General Assembly. This led to the establishment of a U.N. Disarmament Commission, which met sporadically and ineffectively, in subsequent years (1947–1960).

1946, December 30. Baruch Plan Approved. The basic points were adopted by the Atomic Energy Commission and it was referred to the Security Council, where it was killed by Soviet veto.

1958, March 31. Soviet Unilateral Test Ban. The Soviet Union announced that it was halting all tests of atomic and hydrogen bombs. Testing was renewed later, however (September 30).

1958, October 31. U.S. Unilateral Cessation of Nuclear Tests. President Eisenhower announced that this voluntary ban would last for 1 year. After completing a series of tests, the U.S.S.R. tacitly adopted the test ban (December).

1959, August 26. U.S. Extends Unilateral Nuclear Test Ban. A 2-month extension of its 1-year unilateral ban (due to expire October 31) was announced, in view of a 6-week recess in U.S.-British-Soviet nuclear-test talks at Geneva. When no agreement was reached, the U.S. announced that it had dropped its obligation to stop further nuclear-weapons tests (December 31). No tests were made, and it was implied that no atmospheric tests would be conducted so long as the U.S.S.R. refrained from such tests.

1960, March 15. First Meeting of Ten-Nation Disarmament Committee. Results of this effort at Geneva were as fruitless as those of the U.N. commission. It broke up by Soviet action (June 27).

1960, May 7. U.S. Plans to Resume Underground Nuclear Tests. This was for the purpose of improving methods of detecting underground nuclear tests.

1961, September 1. U.S.S.R. Begins Atmospheric Nuclear Tests. This unilateral action, without prior announcement, ended a 2½-year implied atmospheric-test moratorium.

1961, September 5. U.S. Resumes atmospheric Tests. The U.S. began nuclear tests in response to the Soviet Union's unilateral resumption of testing.

1963, April 5. U.S.-Soviet "Hot Line" Agreement. This direct communications link between Washington and Moscow had been proposed at the 17-nation U.N. Disarmament Committee by the United States (March 15) to reduce the danger of accidental war. This action was inspired by the Cuban missile crisis (see p. 1454).

1963, July 25. Nuclear Test Ban Treaty Signed. This concluded more than 3 years of sporadic discussion. It prohibited all nuclear testing in the atmosphere, but permitted underground nuclear tests to continue. Subsequently, most of the nations of the world also signed the treaty, which went into effect in the fall (October 10).

1963, October 17. Renunciation of Weapons in Space. The U.N. General Assembly confirmed earlier unilateral declarations by the U.S. and the U.S.S.R. It was made binding by a formal **Treaty on the Demilitarization of Outer Space** (January 27, 1967; in force October 10, 1967).

1964, July 21. Denuclearization of Africa. Announced by a declaration of the heads of state and government of the Organization of African Unity at a summit conference at Cairo.

1967, February 14. Denuclearization of Latin America. This treaty, signed in Mexico City by representatives of most Latin American states, was approved by the U.N. General Assembly (December 5, 1967). United States endorsement went into effect May 12, 1971.

1967, March 2. U.S.-U.S.S.R. Agree to Nuclear Arms Limitation Negotiations. (See SALT entries below.)

1968, July 1. Treaty on Nonproliferation of Nuclear Weapons. Most nations of the world agreed to stop the spread of nuclear weapons to nations not yet possessing them. Although many non-nuclear nations protested that this committed them to perpetual second-class sovereignty, most signed the treaty (in force March 5, 1970). Among nations not signing were nuclear powers France and Communist China, and such potential nuclear powers as Argentina, Brazil, India, Israel, Pakistan, South Africa, and Spain.

1969, November 17. Beginning of U.S.-Soviet Strategic Arms Limitation Talks (SALT). Representatives of the 2 nations met at Helsinki, Finland, for a month to initiate a major effort to establish firm controls over nuclear weapons. Subsequent secret meetings alternated between Helsinki and Vienna.

1969, November 25. United States Renounces Biological Warfare and First Use of Chemical Warfare. President Richard M. Nixon renounced for the U.S. first use of chemical weapons, and all methods of biological warfare. Toxins—weapons on the borderline be-

tween chemical and biological agents—were later banned (February 14, 1970). He also requested the U.S. Senate to ratify the Geneva Protocol of 1925 (outlawing chemical warfare), never ratified by the U.S. This was eventually achieved (December 1974).

1971, February 11. Treaty to Denuclearize the Seabed. This treaty prohibited the emplacement of nuclear weapons and other weapons of mass destruction "on the seabed and the ocean floor and in the subsoil thereof."

1971, September 30. U.S.-Soviet Nuclear Accidents Agreement. This was the first published product of the SALT negotiations. To reduce the possible risk of accidental war, both nations pledged themselves to notify each other in the event of (a) an accident that might cause detonation of a nuclear weapon; (b) detection of suspicious activity by either nation's security warning system; or (c) planned missile launches in the direction of the other. The agreement, signed at Washington, entered into force immediately.

1972, May 26. U.S.-Soviet SALT Agreements. At a summit meeting in Moscow President Nixon and Soviet Communist Party Secretary **Leonid Brezhnev** signed the first major results of 3 years of SALT negotiations (see above). The first of these, **Treaty on the Limitation of Anti-Ballistic Missiles,** prohibited nationwide deployment of ABM systems but allowed each nation to establish limited ABM defenses for its national capital and 1 ICBM site. The problem of verification is not mentioned; both sides tacitly agreed that their observation satellites could assure compliance. The second, **Interim Agreement on Limitation of Strategic Offensive Weapons,** provided for a 5-year moratorium on deployment of strategic offensive rocket launchers; its objective was to freeze ICBM deployments at then-existing levels during the prolonged negotiations anticipated to be necessary to work out a comprehensive agreement limiting strategic nuclear weapons. At that time the U.S. had 1,056 launchers and the Soviets had 1,618 launchers. The interim agreement did not prohibit qualitative improvements (such as accuracy) or the development of multiple independently targeted reentry vehicles (MIR Vs).

1973, June 21. Second Round U.S.-Soviet SALT Agreements. At a summit meeting in Washington, President Nixon and Secretary Brezhnev signed 2 additional SALT agreements. The first of these, **Basic Principles of Negotiations on the Further Limitation of Strategic Offensive Weapons,** indicated some progress toward the comprehensive treaty needed to replace the Interim Agreement (see above). The second, **Agreement on the Prevention of Nuclear War,** provided that both nations would avoid "situations capable of causing a dangerous exacerbation of their relations, as to avoid military confrontations, and as to exclude the outbreak of nuclear war between them and between either of [them] and other countries."

1973, October 30. NATO-Warsaw Pact Negotiations on Mutual Force Reductions. These discussions began in Vienna.

1974, July 3. ABM Reduction Protocol. The U.S. and the Soviet Union agreed to reduce the number of ABM sites to 1 each.

1974, November 24. Vladivostok Agreement. A definite limit on all strategic launchers was set at 2,400 and of 1,320 on MIRVed missile launchers. Strategic bombers were to be counted as launchers.

COMMENT. *The SALT I treaty was criticized for a number of reasons, but in particular for limiting ABM development and deployment. Critics believed that the U.S. gave up a substantial advantage in the development of counterforce damage-limiting strategic systems. The treaty was also criticized as an example of a controversial nuclear doctrine of the 1960s–1970s deterrence through mutual assured destruction (MAD). These critics urged the development of a doctrine of deterrence through damage-limiting counterforce capabilities. The criticism seemed to be confirmed when, soon afterward, the U.S. deactivated its sole ABM site protecting missiles at South Forks, South Dakota.*

WESTERN EUROPE

Defense Arrangements; Nato 1948–1973

Immediately after World War II, Soviet truculence posed a threat to the postwar recovery of Western Europe. Thanks to American economic assistance through the Marshall Plan, Western Europe avoided the economic chaos which the Communists had hoped to exploit through subversion and revolution. But full economic recovery in these nations was hampered by fears that Soviet Russia, whose armed strength had increased rather than decreased after the war, would take by invasion what Communist agents were unable to subvert from within. Although the U.S. still possessed a nuclear monopoly, Western Europeans feared that a Soviet overland attack could overrun Western Europe in less than a week. They recognized their own military impotence and doubted that America would react in time to prevent a *fait accompli*.

On April 4, 1949, in Washington, a treaty was signed to establish (effective August 24) a North Atlantic Treaty Organization (NATO) by Belgium, Canada, Denmark, France, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, United Kingdom, and the U.S. Greece, Turkey, and West Germany joined later. They agreed to settle disputes by peaceful means, and to develop their individual and collective capacity to resist armed attack, to regard an attack on one as an attack on all, and to take necessary action to repel attack under Article 51 of the U.N. Charter. The principal NATO commands were the European Command (with headquarters at Supreme Headquarters Allied Powers, Europe—SHAPE), Atlantic Command, and a Channel Command. The principal relevant events were:

1948, March 17. Brussels Treaty. A 50-year military and economic assistance treaty between Britain, France, the Netherlands, Belgium, and Luxembourg. Field Marshal Viscount **Bernard L. Montgomery** was appointed to head a permanent "Western Union" defense organization (September 30). The U.S., Canada, and the Brussels Treaty nations began negotiations for a larger North Atlantic Security Treaty (July).

1950, December 19. Eisenhower Appointed Supreme Allied Commander, Europe. As SACEUR, General Eisenhower toured all NATO capitals from his headquarters in Paris to investigate possibilities of creating an effective peacetime force. Later he assumed command of all forces placed at his disposal in Europe by NATO members (April 2, 1951). Montgomery was Deputy SACEUR.

1951, April 27. Defense of Greenland. The U.S. and Denmark agreed on the joint defense of Greenland for the duration of the North Atlantic Treaty.

1951, September 6. U.S. Rights in Azores. In Lisbon, the U.S. and Portugal agreed on continued U.S. rights in the Azores, within the NATO region.

1951, October 22. Greece and Turkey Admitted to NATO.

1952, April 11. Ridgway to Replace Eisenhower. General **Matthew B. Ridgway** was appointed SACEUR, effective May 30.

1952, May 27. Establishment of European Defense Community. A treaty establishing the EDC between France, West Germany, Italy, Belgium, Luxembourg, and the Netherlands. West Germany would be restored to complete independence, would be a participant in the defense community, and would supply troops to NATO.

1953, April. NATO Plans for Nuclear Weapons. SHAPE Chief of Staff, General **Al-**

fred M. Gruenther, testified before the Senate Foreign Relations Committee that the NATO defense plans in Europe called for limited use of ground troops and intensive use of atomic weapons.

1953, July 11. Gruenther Replaces Ridgway as SACEUR.

1954, April 16. U.S. Assurances to EDC. President Eisenhower assured the 6 EDC premiers that the U.S. would maintain forces in Europe so long as a threat of Soviet aggression continued to exist.

1954, August 30. France Rejects EDC. This vote of the French National Assembly ruined plans for a new European military pact and the rearmament of Germany.

1954, October 3. New Plan for German Rearmament. The U.S., Britain, France, West Germany, Canada, Italy, Belgium, the Netherlands, and Luxembourg agreed to integrate a rearmed West Germany militarily and politically into the Western European Union and NATO. This was approved by the French National Assembly (October 12) and by the North Atlantic Council (October 22).

1955, April 13. U.S. to Share Atomic Secrets with NATO. President Eisenhower approved an agreement to share information on atomic weapons.

1956, November 20. Norstad Appointed SACEUR. General **Lauris Norstad,** USAF, replaced Gruenther.

1957, January 24. German to Command NATO Ground Forces. General **Hans Speidel** was named commander of NATO forces in Central Europe.

1959, March 13. France Withdraws Fleet from NATO. She notified the North Atlantic Council that ⅓ of the French Mediterranean Fleet, which had been ear-marked for NATO command in wartime, would be retained under French control.

1959, July 8. U.S. Withdraws Planes from France. The decision to move 200 jet fighter bombers to Britain and West Germany was caused by French refusal to permit stockpiling of U.S. nuclear weapons in France unless under French control.

1960, December 16. U.S. Offers Nuclear Submarines to NATO. This offer of 5 nuclear submarines equipped with 80 Polaris missiles was conditional upon agreement by the NATO allies on a multilateral system of control of weapons and on the purchase of 100 additional Polaris missiles by the European NATO states.

1962, May 6. U.S. Commits Nuclear Submarines to NATO. These 5 submarines were to remain under U.S. control since no agreement had been reached on the previous U.S. offer for a multilateral force.

1963, January 2. Lemnitzer Appointed SACEUR. General Lyman L. Lemnitzer, USA, former chairman of the U.S. JCS, succeeded Norstad.

1963, January 14. De Gaulle Rejects U.S. Proposal for a Multilateral Nuclear Force.

1966, March 9. France Announces Military Withdrawal from NATO. The French Government announced withdrawal of its forces and staff officers from the integrated military commands of NATO, and demanded removal of all NATO bases and headquarters installations from French territory within 1 year. De Gaulle's announced reason was that conditions in 1966 were "fundamentally different from those of 1949." France made clear, however, that it was not withdrawing from the alliance, or from nonmilitary alliance activities. In a joint statement 9 days later, the other 14 members of NATO criticized the French action and reaffirmed their firm commitment to NATO's military structures. Within the next few months the NATO Secretary General's office was moved from Paris to Brussels; SHAPE headquarters was moved from Versailles to Casteau, Belgium; Allied Forces Central Europe headquarters was moved from Fontainebleau to Maastricht; and the NATO Staff College was shifted to Rome. U.S. forces in France, totaling nearly 30,000 troops and 60,000 dependents, began to move to neighboring NATO countries on June 30, 1966.

1969, July 1. Goodpaster Appointed SACEUR. General **Andrew J. Goodpaster,** U.S.A. former Deputy Commander in Vietnam,

replaced General Lemnitzer as Supreme Commander Allied Powers Europe.

1974, December 15. Haig Appointed SACEUR. General **Alexander M. Haig, U.S.A.,** former Chief of Staff for President Nixon, replaced Goodpaster as Supreme Commander Allied Powers Europe.

United Kingdom

Britain, exhausted and on the verge of national bankruptcy in 1945, began drastic reduction of her international commitments. This was evidenced by dramatic British withdrawal from Greece and from other occupation roles (see p. 1388), as well as the reduction of its occupation force in Germany, and by initiating the liquidation of its vast colonial empire, beginning with India (see p. 1403) and Burma (see p. 1410).

Despite this curtailment, involving a frank though unpalatable acceptance of decline from truly great-power status, Britain still found itself almost continuously involved in military actions of one sort or another around the world throughout the period. The U.K. nevertheless remained the third most powerful nation in the world, despite economic constraint. The major events of military significance:

1945–1947. Pacification in Greece. (See p. 1387.)

1945–1965. Troubles in Arabia. Intermittent frontier conflicts in Aden and Arabian protectorates (see pp. 1400, 1401).

1947, March 4. Treaty of Dunkirk. A 50-year Anglo-French treaty of alliance in face of the Soviet threat to Western Europe.

1948, March 17. Brussels Treaty. Expansion of the Anglo-French alliance to include the Benelux nations (see p. 1372).

1948–1960. Communist Revolt in Malaya. (See p. 1420.)

1948–1949. Berlin Blockade. RAF units participated in the air shuttle (see p. 1378).

1949, April 18. Independence of Eire. Ireland broke off all ties with Great Britain and became a completely independent republic.

1950, March 29. Churchill Urges Rearmament of Germany. His suggestion that Germans share in defense of Western Europe was called "frightful" by Foreign Minister **Ernest Bevin.**

1950–1953. Korean War. British Commonwealth units (predominantly British) participated (see p. 1355).

1951, May 1. Armed Services Unification. Land, sea, and air forces were placed under the operational control of the 3-man Chiefs of Staff Committee with the ground-force commander, General Sir **Miles Dempsey,** as chairman.

1952–1956. Mau Mau Uprising in Kenya. (See p. 1436.)

1952, September 8. Establishment of Southeast Asia Treaty Organization (SEATO). (See p. 1410.)

1952, October 3. Britain Explodes Atomic Bomb. Through this explosion in northwest Australia, she became the third nation to possess nuclear weapons.

1952–1959. Civil War and Terrorism in Cyprus. (See p. 1390.)

1956, October 31–November 6. Franco-British Attack on the Suez Canal. (See p. 1342.)

1957, April 4. Drastic Change in Defense Policy. Recognizing that protection against nuclear weapons was impossible, Britain concentrated on deterrence by threat of nuclear retaliation. Overseas commitments were drastically reduced and armed forces cut by 40 percent over 5 years.

1957, May 15. Britain Explodes Its First Hydrogen Bomb.

1957, July–August. Assistance to Muscat and Oman. (See p. 1401.)

1960, February 16. New Defense Policy. The government announced a shift from reliance on ground-based nuclear weapons to ballistic nuclear missiles launched from aircraft and nuclear submarines.

1960, April 13. Britain Abandons Ballistic-Missile Development. A government decision was announced to abandon the military development of a fixed-site medium-range "Bluestreak" ballistic missile, and to rely on the RAF strategic V-bombers and the U.S.-designed "Skybolt" missile. This was formally agreed by the U.S. (June 6).

1960, November 1. U.S. Nuclear Submarine Base in Scotland. Prime Minister **Harold Macmillan** announced to the House of Commons an agreement for basing U.S. nuclear-powered Polaris missile submarines at Holy Loch, on the Firth of Clyde, in Scotland.

1962. Commonwealth Troops to Thailand. This was to fulfill a SEATO commitment, resulting from civil war in Laos (see p. 1417).

1962, December 21. Collapse of "Skybolt" Program. After discussions between President Kennedy and Prime Minister Macmillan at Nassau, Bahamas, it was announced that the U.S. had decided to cancel the "Skybolt" program (upon which British nuclear defense and deterrence plans were based), but had agreed on the development of a multilateral NATO nuclear force (see p. 1373).

1963–1965. Malaysia-Indonesia Crisis. Commonwealth forces (primarily British) supported the Federation of Malaysia against Indonesian encroachments.

1964, January. British Intervention in East Africa. Troops were dispatched to Tanzania, Kenya, and Uganda (at request of local governments) to suppress antigovernment uprisings (see pp. 1473, 1438).

1964, September 21. Independence to Malta. The tiny republic remained in the British Commonwealth.

1965, February 9. Retrenchment in Development of Weapons Systems. Aviation Minister **Roy Jenkins** told Parliament that Britain could not afford to develop its own expensive new weapons systems and in future must cooperate, particularly in aircraft projects, with other nations, primarily the United States.

1966, December 3. Reinforcement of Zambia. Britain sent a squadron of RAF jets, plus a ground force protective contingent from the RAF Regiment, in response to an appeal from President **Kenneth Kaunda** of Zambia, who feared an attack by Rhodesia on the Kariba Dam on the Zambia River.

1967, July–August. Violence in Hong Kong. Communist-inspired violence, bordering on insurrection, was suppressed by British troops after much bloodshed.

1967, November 2. Withdrawal from Arabia. Foreign Secretary **George Brown** announced that Britain would withdraw all forces (some 5,000 troops) from Aden and south Arabia, calling this "the end of the imperial era." Two months later (January 16 1968) it was announced that all British bases east of Suez would be closed by 1971; simultaneously Britain announced canceling an order of 50 F-111 jets from the United States.

1968, May 10. Britain Increases Forces "Earmarked" for NATO. Because of the withdrawal from east of Suez, Britain's share in land, sea, and air forces for NATO was increased by 40 percent.

Civil War in Northern Ireland, 1969–1974

1969–1974. Continuous Violence in Ulster. Catholic-Protestant terrorism kept the province in a bloody turmoil barely comtrolled by the equivalent of a British division plus local police. The Irish Republican Army (IRA) terrorist group, outlawed in Eire, was nonetheless based in Eire and attempted to force the British to agree to cession of Ulster to Eire. Some violence, in the form of bombings, spread to Britain. Ostensibly religious, the real issues were economic, social, and political.

1969, April 21. British Troops Protect Key Installations in Ulster. As a result of increased violence, more than 1,000 troops were

deployed to protect reservoirs, telephone exchanges, and power stations.

1969, August 19. British Army Assumes Responsibility for Ulster Security. This was a response to increased violence in Ulster and to a suggestion from Eire that a British-Irish force, or a U.N. force, assume responsibility for security in Northern Ireland. The British government rejected the Irish proposal.

1971, November 1. ANZUK Force Replaces British Garrison in Singapore. **(See p. 1421.)**

1972–1973. Dispute with Iceland. The unilateral extension of Iceland's coastal fishing rights area from 12 to 50 miles (July 14) led to British protests, supported by the International Court of Justice (August 17). Iceland refused to recognize the ruling, and Icelandic police gunboats drove away British trawlers, leading to the bloodless collision of an Icelandic gunboat and a British frigate (September 10, 1973). Temporary British acceptance of the new limit did not settle the dispute.

1972, January 30. "Bloody Sunday" in Londonderry. Thirteen unarmed civilians were killed by British troops attacked by Catholic demonstrators. In response, an Irish mob in Dublin stormed and burned the British Embassy.

1972, July 28. British Army Occupies Catholic Areas of Belfast and Londonderry. Barricaded enclaves previously considered too dangerous to enter were swept in a 3-day operation. British forces in Northern Ireland were at a 17,000-man peak.

Ireland

1956, December–1957, November. IRA Terrorist Campaign. Efforts by the outlawed Irish Republican Army to obtain the support of the Irish Government in efforts to unite Ireland and Ulster were partially successful and led to fruitless discussions between President **Eamon de Valera** and the British government (March 1958).

The Low Countries

Belgium and the Netherlands both assumed Western Union and NATO (see p. 1372) commitments. Other Belgian military action has been limited to occasional commitment in the Congo (see p. 1441), and the Netherlands has been involved in military action in Indonesia (1945–1949) and in defending New Guinea against Indonesian encroachments (1949–1963; see p. 1422). All 3 contributed combat units to the U.N. Command in Korea (see p. 1366).

France

The nation was plunged into political turmoil following World War II. General de Gaulle, elected president of the provisional government of the Fourth Republic (November 13, 1945), resigned in disgust as the feuding factions refused to compose their differences (January 20, 1946). He returned to power 12 years later, averting likely civil war. The following are the major events of military significance:

1946–1954. Indochina War. **(See p. 1412.)**

1947, March 4. Anglo-French Treaty of Alliance. **(See p. 1374.)**

1948, March 17. Brussels Treaty. **(See p. 1372.)**

1948, October 21–28. Revolution in Mahe (French India). A pro-Indian revolt was suppressed by French troops.

1949, April 4. NATO Treaty. **(See p. 1372.)**

1950–1953. Korean War. **(See p. 1355.)**

1954. Geneva Conference. **(See p. 1414.)** End of French rule in Indochina.

1954–1962. Algerian Revolt. (See p. 1433.)

1956, October 31–November 6. Franco-British Attack on the Suez Canal. (See p. 1342.)

1957–1958. To the Brink of Civil War. France slipped to the verge of civil war as increasingly impotent political leadership proved unable to cope either with the problems of the revolt in Algeria or the pressing political and economic issues at home.

1958, June 1. De Gaulle Returns to Power. With the French army in Algeria virtually in a state of mutiny against the government (see p. 1433), de Gaulle was recalled to power by popular clamor and the Fifth Republic was established with him as its first president (December 21).

1960, January–November. France Gives Up Colonial Empire. (See p. 1433.) De Gaulle offered the newly independent countries economically attractive terms to remain members of the French community. Most accepted.

1960, February 13. France Explodes Nuclear Weapon in the Sahara. She became the world's fourth nuclear power.

1960, December 6. France to Be Militarily Independent of U.S. De Gaulle formally announced a plan for establishing an independent French nuclear striking force. By development of its own independent military power, exemplified by the small nuclear-capable air bombardment striking force, or *force de frappe,* de Gaulle emphasized French military and political independence of the U.S. and NATO, while retaining a consistently western-oriented strategy (1960–1965).

1961, April 22–26. Army Mutiny in Algeria. This was forcefully suppressed by de Gaulle (see p. 1433).

1961, July 19–21. Clash with Tunis. Tunisian violence, caused by Algerian border dispute, erupted against French bases in Tunisia; Bizerte was besieged by Tunisian forces. Massive French counterattacks, by land, sea, and air, overwhelmed Tunisian besiegers; both sides accepted a U.N. cease-fire (see p. 1435).

1963, January 22. Franco-German Treaty of Friendship. This pledged cooperation between the 2 countries in foreign policy, defense, and cultural affairs.

1964, February 18. French Intervention in Gabon. (See p. 1444.)

1963, August 15. French Troops to Congo (Brazzaville). The French unit in the Congo was reinforced by troops airlifted to Chad during disorders related to a coup d'état (see p. 1444). President de Gaulle refused, however, to have French troops support ousted President **Fulbert Youlou.**

1965, July 14. Mirage IV Jet Bombers Revealed. Twelve flew over the Bastille Day Parade, demonstrating a French long-range nuclear weapon delivery capability.

1966, March 9. French Military Withdrawal from NATO. (See p. 1373.)

1966, July–October. French Nuclear Weapons Tests in the Pacific. Between July 2 and October 4, France exploded 5 weapons, up to 400 kilotons in size, at Mururoa Atoll, 750 miles southeast of Tahiti. France ignored protests from Australia, New Zealand, Japan, and 5 South American nations.

1967, November 16. Intervention in Central African Republic. (See p. 1440.)

1968, August 24. France Explodes Thermonuclear Weapon in the Pacific. The 2-megation device, suspended from a balloon above Mururoa Atoll, made France the world's fifth thermonuclear power. A second H-bomb was detonated on September 8.

1968, August 28. French Troops to Chad. The French contingent of 1,000 troops was ordered to assist the Chad government in putting down a rebellion in the northwest corner of the country. Approximately one battalion of French paratroopers was airlifted in to participate.

1970, January 9. Sale of Aircraft to Libya. (See p. 1434.)

1973, July. Nuclear Tests in Pacific.

West Germany

Threat of war between the U.S.S.R. and her satellites on the one hand and the nations of the Free World on the other hung over divided Germany throughout the period. The Federal Republic of Germany, with its capital at Bonn, was proclaimed May 23, 1949, the puppet Communist German Democratic Republic on October 7. Meanwhile, friction intensified in Berlin, lying within the Soviet zone of occupation but divided in a quadripartite Kommandatura, and access—except by air—was never established by formal agreement.

1945, November 20. Nuremberg War Crimes Trials Begin. Twenty-two Nazi leaders were convicted of war crimes, 11 being condemned to death by the International Military Tribunal (October 1, 1946): Hermann Goering, Joachim von Ribbentrop, Ernst Kaltenbrunner, Marshal Wilhelm Keitel, Alfred Rosenberg, Hans Frank, Wilhelm Frick, Julius Streicher, Fritz Sauckel, General Alfred Jodl, and Arthur Seyss-Inquart. Rudolph Hess, Walther Funk, and Admiral Erich Raeder were sentenced to life imprisonment. Baldur von Schirach and Albert Speer were sentenced to 20 years imprisonment, Konstantin von Neurath to 15 years, Admiral Karl Doenitz to 10. Hjalmar Schacht, Franz von Papen, and Hans Fritsche were acquitted. Ten of the convicted war criminals were hanged (October 15, 1946); Goering committed suicide by swallowing poison 2 hours before scheduled to be hanged.

1947, January 14. Beginning of Talks for German and Austrian Peace Treaties. In London, deputies of the Big-Four foreign ministers opened preliminary talks.

Berlin Blockade, 1948–1949

1948, March–June. Soviet Harassment of Western Powers in Berlin. This began when the Soviet delegation walked out of the Allied Control Council (March 20). Soon thereafter, the Soviets began interference and harassment of American and British access to Berlin from West Germany (April 1). The Soviet representative walked out (June 16) of the Kommandatura (4-power military commission in Berlin), virtually cutting off the Soviet military command in Berlin from the 3 western powers.

1948, June 22. Beginning of the Blockade. Soviet occupation authorities halted all railroad traffic between Berlin and the west. There was less than 1 month's food supply for the 2 million inhabitants of the western sectors of Berlin. U.S. General **Lucius D. Clay,** commanding U.S. occupation forces in Germany, urged that the Western Allied garrisons stay put, and that Berlin be supplied by air. His recommendations were upheld.

1948–1949, June 26–September 30. Operation "Vittles." Immediate mobilization of all Western Allied military aircraft available began, while Clay rallied Berlin civilian help to expand the 2 available air-fields. (A third was soon built.) Air Lift Task Force (Provisional), commanded by U.S. Major General **William H. Tunner** and composed mainly of U.S. planes and pilots, with smaller increments of British and French air forces, accomplished the most extraordinary military peacetime effort in history. Running on split-second schedule, through all sorts of weather, and harassed from time to time by "buzzing" of Soviet fighter planes, 277,264 flights were made, lifting a total of 2,343,315 tons of food and coal. The record day's lift was on Easter Sunday, April 16, 1949, when 1,398 flights brought 12,940 tons into Berlin. The operation cost the lives of 75 American and British airmen, including a collision when a Soviet pilot, bedeviling a passenger-loaded British plane, misjudged his distance and brought both aircraft down in the crash.

1948, July 26. Western Powers Halt All Trade with East Germany. This was retaliation for the blockade.

1949, May 12. Soviets End Blockade. Soviet

authorities, conceding defeat, officially lifted the blockade, but the air supply operation continued until September 30.

1949, April 14. End of the Nuremberg War Crimes Trials.

1949, September 7. The Federal Republic of Germany Established. Its capital was at Bonn. Dr. **Konrad Adenauer** was elected chancellor (September 15). The U.S., Britain, and France guaranteed the defense of West Germany (September 19) and ended their military government (September 21).

1949–1965. Intermittent Berlin Incidents. The U.S.S.R. and the East German Communist regime frequently tested Western Allied will and determination, and attempted to erode the occupation and access rights of the Western Allies to Berlin.

1952, March 1. Britain Returns Heligoland to West Germany.

1953, March. Allied-Soviet Air Incidents. An American plane was shot down over the U.S. zone (March 10), and a British bomber was shot down over the British zone (March 12). The U.S. ordered 25 of its latest Sabrejets to Germany, to counter the threat, while secret conciliation talks began between Britain and Russia (March 31), which later were attended by France and the U.S.

1954, October 23. Rearmament of Germany within NATO. The NATO Council admitted Germany to NATO. Next day, France specifically recognized the sovereignty of West Germany.

1955, May 5. Federal Republic of Germany Becomes a Sovereign State.

1961, July. Renewed Berlin Crisis. Prime Minister **Nikita Khrushchev,** renewing demands for Allied withdrawal from Berlin, announced suspension of planned troop reduction and an increase in the Soviet military budget (July 8). Britain, France, and the U.S. rejected Khrushchev's terms for the settlement of the Berlin and German questions (July 17). President Kennedy directed a build-up of U.S. military strength and mobilized 4 National Guard divisions (see p. 1454).

1961, August 12–13. The Wall. The East German government closed the borders between East and West Berlin to East Germans. A wall, built overnight, split the city. The Soviet Union rejected western protests against the sealing of the border (September 11). Soviet and U.S. tanks confronted one another at "Checkpoint Charlie," but tension died. The division continued at the end of the period.

1965, February 12. Germany Suspends Arms Shipments to Israel. This was in response to UAR warning that it would sever diplomatic relations if shipments were not halted.

1966, December 6. Luftwaffe's F-104G Starfighters Grounded. This action was taken by General **Johannes Steinhoff** as a result of the Luftwaffe's 65th Starfighter crash since 1962. American airmen said that the German crashes were due to the German practice of putting more equipment into these aircraft than they were designed to carry.

1970, August 12. German-Soviet Nonaggression Treaty. This was signed in Moscow by German chancellor **Willy Brandt** and Soviet Premier **Alexei Kosygin.**

1970, December 7. Treaty with Poland. This recognized the post–World War II boundary imposed by the Allies, along the Oder-Neisse rivers. It confirmed cession of 40,000 square miles, ¼ of Germany, to Poland.

1971, August 23. New Agreement on Berlin. The U.S., Britain, France, and the U.S.S.R. signed a new agreement on access to Berlin and passage of West Berliners into East Germany. The agreement was endorsed by both East and West Germany. East Germans were not authorized to visit West Germany or West Berlin. This was followed (December 17) by an agreement between the 2 Germanies, authorizing West Germany free access to West Berlin.

1972, December 21. Treaty between East and West Germany. Although the possibility of future unity was left open, this meant full recognition by each of the sovereignty of the other.

Scandinavian States

All Scandinavian states were preoccupied during the period with the question of national security against Communist infiltration or outright aggression. While Denmark, Norway, and Iceland became members of NATO, Sweden maintained a strict—though western-oriented—neutrality. Finland—which clearly demonstrated an equally pro-western orientation—also maintained a neutral status, but was forced by geography and power realities to maintain closer relations with the U.S.S.R. (For Iceland's dispute with Britain, see p. 1376.)

Austria

After 10 years of Allied occupation marked by inability of the Big Four to agree on a peace treaty, the nation regained its independence by a treaty signed at Vienna by the U.S., U.K., France, and U.S.S.R. (May 15, 1955), restoring Austria's frontiers existing January 1, 1938. Under the treaty a small army and air force (about 60,000 strong) were permitted. The treaty requirement for neutrality was confirmed by Austria's official proclamation of permanent neutrality (act of October 26, 1955).

Italy

1946, May 9. Abdication of King Victor Emmanuel III. He abdicated in favor of his son, **Humbert II.**

1946, June 2. Italian People Vote to End the Monarchy. The Italian government declared Italy a republic (June 2). After some outbreaks of violence between royalists and republicans, King Humbert left the country (June 13).

1946, July 29. Peace Conference Opens in Paris. Treaties were negotiated between the World War II victors and Italy, Hungary, Bulgaria, Rumania, and Finland. These allied peace treaties were eventually signed in Paris (February 10, 1947).

1947, September 16. Crisis at Trieste. A Yugoslav military force, menacing Trieste, was deterred by the deployment of an American battalion for combat. Tension remained high; incidents, including occasional small-arms fire, were frequent.

1947, December 14. End of Allied Occupation of Italy. British and U.S. units remained in Trieste, however, to prevent Yugoslav seizure.

1948, July 14–16. Communist Riots. These were sparked by an assassination attempt against Communist leader **Palmiro Togliatti.** Police and troops restored order after considerable bloodshed.

1952, March 20. Civil Disorder in Trieste. Pro-Italians attacked American and British installations in protest against continued Allied occupation of Trieste.

1953, August 29–31. Border Clash with Yugoslavia. Italy's dispute with Yugoslavia escalated as both sides held maneuvers near Trieste, and Yugoslav antiaircraft fired at Italian planes over the border. Shots also were fired between Yugoslav troops and the Anglo-American force occupying Trieste.

1953, October 8–December 5. De Facto Settlement at Trieste. Britain and the U.S. announced that they would withdraw their occupation forces (4,000 U.S. and 3,000 British) and return Zone A of Trieste to Italy. After an increase of tension between Italy and Yugoslavia, the 2 nations agreed to withdraw their troops from the border (December 5). An agreement was later signed between them (October 5, 1954).

1963, January. Nuclear Weapons Agreement with U.S. **(See p. 1389.)**

Spain

1949, August 4. Spain's Application for Marshall Plan Aid Rejected. The U.S. Senate refused to include such aid in the Marshall Plan appropriations.

1953, September 26. Ten-Year Defense Agreement with U.S. This gave the U.S. rights to Spanish naval and air bases in return for economic and military aid. The bases were to be: air bases near Madrid, Albacete, Valencia, and Seville; naval facilities at Ferrol, Cadiz, Cartagena, Valencia, and Port Mahon on Minorca.

1965, September 26. Renewal of Base Agreement with the United States. This provided for the continued lease of air and naval bases to the U.S., in exchange for economic and military aid.

1970, August 8. Renewal of Base Agreement with United States. In return the U.S. was to provide $153 million in economic and military aid, including the lease of 12 naval vessels.

Portugual

1946, October 11. Unsuccessful Revolt Attempt. Most military rebels against the regime of dictator **Antonio de Oliveira Salazar** were captured in Estarreja or Lisbon.

1961, January 22–February 2. *Santa Maria* Incident. Portuguese rebels, planning a revolt against the Salazar government, seized the Portuguese passenger ship S.S. *Santa Maria*. The rebel leader was former navy Captain **Henrique Malta Galvao** and former General **Humberto da Silva Delgado** (ashore in Brazil). After warnings from the U.S. and British navies, Galvao took the *Santa Maria* to Recife and accepted asylum in Brazil.

1961–1974. Rebellion in Angola. **(See p. 1443.)**

1962, January 1. Unsuccessful Revolt Attempt. Loyal troops quickly suppressed an uprising by a small military unit in Beja.

1962–1974. Rebellion in Portuguese Guinea. **(See p. 1445.)**

1962–1974. Rebellion in Mozambique. **(See p. 1448.)**

1967, July–August. Violence in Macao. Communist-inspired violence, bordering on insurrection, was suppressed by local police only after the major center of violence, on Hong Kong, was eliminated by British troops (see p. 1375).

1970, November 22–24. Portuguese-supported Invasion of Guinea. **(See p. 1443.)**

(1974, March 16. Military Revolt Fails. Young officers, leading a small motor march on Lisbon, surrendered when other military units failed to join them. Reportedly they were supporters of General **Antonio de Spinola,** who was dismissed as Deputy Chief of Staff (March 14) as a result of a recent book critical of Portugal's military, diplomatic, economic, and colonial policies.

1974, April 25. Coup d'Etat. The government of Premier **Marcello Caetano** (successor of Salazar) was overthrown by a military uprising. General Spinola was the leading member of a six-officer junta, which pledged liberal freedom to Portugal after 40 years of repressive dictatorship. Spinola became provisional president (May 15).

1974, September 30. Spinola Resigns. This was because of his inability to control leftist tendencies in his new government represented by Premier (former general) **Vasco Gonçalves.** Spinola was replaced by General **Francisco da Costa Gomes,** who reappointed Gonçalves as premier.

EASTERN EUROPE

Soviet Bloc and Warsaw Pact Nations

1947, July. Communist Nations Reject the Marshall Plan. Although Poland and Czechoslovakia initially indicated an interest in joining in the Marshall Plan, they later rejected the offer, obviously under Soviet pressure, as did the East European nations of Hungary, Rumania, Albania, Bulgaria, Yugoslavia, along with Finland.

1947, October 5. Establishment of the Cominform. At a meeting in Moscow of the Communist parties of 9 European nations, a new Communist International, the Com-inform, was established.

1955, May 14. The Warsaw Pact. The Soviet Union and its satellites—Poland, Czechoslovakia, Hungary, Rumania, Bulgaria, East Germany, and Albania—signed a treaty of mutual friendship and defense at Warsaw. Yugoslavia refused to join. This nominally mutual-defense treaty was the Communist bloc's answer to NATO and the remilitarization of West Germany. This actually caused no changes in the relationship between Soviet and satellite forces.

Soviet Union

Despite near-catastrophic losses of man power, materials, and production facilities, at the close of World War II the U.S.S.R. was without question the second great power in a bipolar world. Soviet armies occupied all of Eastern Europe, much of Central Europe, northern Iran, Manchuria, and northern Korea. While the Western Allies demobilized their armies as quickly as possible after the war, Soviet military forces were maintained close to their wartime strength. At the same time, the Soviets were increasingly truculent in and out of the U.N., refused to carry out postwar agreements for the liberation of Eastern Europe, and were obviously determined to extend Soviet power and influence in any direction at any opportunity. This threatening and aggressive attitude was combined with the Soviet-directed efforts of international communism to take advantage of postwar chaos and dislocation to gain control of the governments of many nations in Europe and Asia.

It soon became evident that the combination of Soviet threats of external aggression and of internal subversion by indigenous Communists was creating pressures that few of the war-weakened nations in the world could withstand by their own individual efforts. Subservient Communist satellite governments were established throughout East Europe. Britain's sudden and unexpected decline caused the U.S. to undertake economic and military measures to assist nations threatened by Soviet Communist aggression (Truman Doctrine, Marshall Plan). This U.S. response to Soviet moves, with the aim of blocking Soviet expansion, triggered the so-called Cold War.

Thwarted by American counteraction—initially supported by the American monopoly of nuclear weapons and long-range bombardment capability—the U.S.S.R. devoted itself to unceasing efforts to improve and modernize its military capability in an effort to offset and, if possible, surpass that of the U.S. The result was unexpectedly early Soviet detonation of atomic and hydrogen bombs. Again the potentially more powerful U.S. slowly reacted to meet the armament challenge and Soviet-inspired aggression of North Korea against South Korea (see p. 1355). As a result, despite rapid modernization and sophistication of its weapons and

armed forces, by the end of the period the Soviet Union had failed to achieve its aim of military parity or superiority over the U.S. (save possibly in the fields of rocket power and space exploration). Nevertheless, its substantial capability in nuclear weapons, and possession of long-range missiles to deliver such weapons, had brought the U.S.S.R. to a position of nuclear stalemate with the U.S., and permitted continuation of its policy of encouraging and supporting Communist subversion in underdeveloped nations throughout the world.

In the development of its nuclear capability, the U.S.S.R. had obviously come to understand the unprecedented destructive power of nuclear weapons, and apparently realized that an all-out nuclear exchange would result in the virtual destruction of the U.S.S.R. This, combined with serious ideological and nationalistic differences with increasingly powerful Communist China, had led to some diminution in the intensity of the Cold War (particularly after the Cuban missile crisis), though there was no evidence of any change in basic Soviet Communist objectives. The undeclared conflict continued at lower levels, and in different forms, as Communist agents fomented and carried on low-intensity "wars of national liberation" wherever the opportunity presented itself around the world. The principal military events of the period were:

1945, August 14. Treaty with China. (See p. 1423.)

1945–1946. Intervention in Azerbaijan. (See p. 1402.) This was the real beginning of the Cold War.

1945–1947. Soviet Bloc Established. Despite World War II agreements at Yalta and Potsdam, and subsequent peace treaties with Nazi East European satellite states, the U.S.S.R. established its own satellite governments in areas occupied by its forces: Albania, Bulgaria, Czechoslovakia, Hungary, Poland, Rumania, eastern Austria, and East Germany (including the eastern sector of Berlin). Yugoslavia, under Tito's Communist government, was initially included in this East and Central European Communist satellite bloc.

1947, March 4. Norway Rejects Soviet Demands on Spitsbergen. The U.S.S.R. had requested rights to establish a military base.

1947, July 7. U.S.S.R. Rejects the Marshall Plan.

1948, April 6. Treaty with Finland. A 10-year alliance was agreed.

1948–1949. Berlin Blockade. (See p. 1378.)

1948, June. Dispute with Yugoslavia. Amidst violent denunciation and counterdenunciation, Yugoslavia withdrew from the Soviet bloc (see p. 1387).

1949, September 23. U.S.S.R. Explodes Its First Atomic Bomb. This ended the U.S. nuclear monopoly.

1950–1953. Korean War. The U.S.S.R. supported North Korea and (later) Communist China in the Korean War (see p. 1355).

1953, March 5. Death of Stalin. He was succeeded by a triumvirate of **Georgi Malenkov, Lavrenti Beria,** and **Nikita Khrushchev.** Beria, who apparently contemplated seizing power, was later overthrown (July) by his colleagues (with army support) and executed (December 23).

1953, June 16–17. Suppression of Uprising in East Berlin. (See p. 1386.)

1953, August 12. U.S.S.R. Detonates Its First Hydrogen Bomb.

1955, May 14. Establishment of the Warsaw Pact. (See p. 1382.)

1955, December 28. Soviet Defense Budget Reduction Announced. Later (May 14, 1956) it was announced that armed forces would be cut by 1,200,000 men over the following year.

1956, February 14–25. De-Stalinization. At the 20th Party Congress in Moscow, Khrushchev, by now unquestioned leader of the U.S.S.R., attacked the memory of Stalin, and to some extent liberalized life and governmental policy in the U.S.S.R. and in the satellites. This revived hopes of personal liberty, which cre-

ated a wave of unrest in the U.S.S.R. and in the satellites.

1956, June 6. Bulganin Demands Reduction of Western Forces in Germany. President Eisenhower rejected the Soviet premier's demand (August 7).

1956, June 28. Unrest in Poland. (See p. 1385.)

1956, July 10. Charges of U.S. Military Aircraft Violation in Korea. A complaint was made to the U.N. Security Council. The U.S. denied the charges.

1956, October 23–November 4. Hungarian Revolt Suppressed by Soviet Forces. (See p. 1385.)

1957, October 4. Soviet Space Triumph. Soviet artificial satellite, Sputnik I, made the first successful penetration of space. It established Soviet preeminence in space exploration, which was being challenged, and perhaps overtaken, at the end of the period by belated American efforts to catch up. It also evidenced a Soviet military preeminence in long-range rocketry, and particularly in the power of its rocket boosters.

1958, March 27. Khrushchev Seizes Control. Ousting Bulganin as premier, he became virtual dictator.

1960, January 20. Soviet Ballistic Missile Achievement. The U.S.S.R. claimed it fired a missile 7,752 nautical miles to within 1.24 miles of its target in the Central Pacific.

1960, May 1. U-2 Incident. Soviet air-defense missiles in central Russia shot down an American U-2 reconnaissance plane piloted by **F. G. Powers,** employee of the U.S. CIA. (See p. 1453.)

1960, May 17. Khrushchev Wrecks Summit Conference. (See p. 1453.)

1961, April 12. First Manned Space Flight. Soviet Major **Yuri Gagarin** became the first human to travel in space. He landed safely in the Soviet Union after 1 circuit of the globe.

1961, August 12–13. The Berlin Wall. (See p. 1379.)

1961, December 9. Soviet Superbombs. At the close of the Soviet Union's post-moratorium test series (see p. 1369), Khrushchev publicly boasted that the Soviet Union had nuclear bombs more powerful than 100 megatons. American analysis of fallout seemed to substantiate the claim.

1962, October 17. Khrushchev Reveals Soviet-Sino Rift. During the 22nd Soviet Communist Party Congress in Moscow, Khrushchev revealed the existence of a Soviet-Sino ideological rift, mainly by attacking Albania, ideological ally of Communist China.

1962, October–November. Cuban Missile Crisis. (See p. 1454.)

1963, July 25. Limited Nuclear Test Ban Treaty. (See p. 1370.)

1964, October 12. First Multimanned Space Flight. The Soviet Union orbited a spacecraft, carrying 3 men, for 16 orbits.

1964, October 14–15. Khrushchev Deposed as Soviet Leader. He was replaced by **Leonid I. Brezhnev** and **Aleksei N. Kosygin.**

1964–1974. Border Clashes With Communist China. (See p. 1429.)

1967, November 3. Soviet Fractional Orbital Bombardment System. The development of this system was revealed in a statement by U.S. Defense Secretary Robert S. McNamara, who said that it would permit firing a nuclear weapon from an orbiting position at a target on the earth. McNamara said that the U.S. had rejected such a system, and did not believe that it would give the U.S.S.R. any advantage.

Hungary

Despite overwhelming anti-Communist popular sentiment, a Communist satellite government was installed with the assistance and protection of Soviet occupation forces (1945–1947). Communist control was unchallenged until a wave of unrest swept over Eastern Europe in 1956, following Khrushchev's de-Stalinization speech (see p. 1383).

1947, May 30. Communist Coup. The government of Premier **Ferenc Nagy** was overthrown.

1956, July 18–22. Shake-up in Communist Government. This was evidence of serious internal unrest in the party and the nation.

1956, October 23. Outbreak of Popular Revolt against Communism. This followed security police attempts to suppress a popular demonstration in Budapest. Soviet occupation forces fired on demonstrators (October 24–25). Revolutionary Councils sprang up throughout the country. The Communist government was toppled in a surprising constitutional parliamentary upheaval (October 25). Erstwhile moderate Communist **Imre Nagy** established a pro-western government. **Erno Gero,** ousted party secretary, called for Soviet troops. Fighting involving Hungarian Communist forces and Soviet troops spread across the country.

1956, October 28. Nagy Announces Soviet Agreement to Withdraw Troops. A lull in the fighting followed.

1956, November 1–4. Soviet Suppression of Revolt. By a combination of treachery and surprise, Soviet forces—with some 200,000 troops and 2,500 tanks and armored cars—surrounded Budapest. Nagy appealed for U.N. aid. The Soviets attacked, captured Nagy and his government (November 4), and swept through Budapest despite the valiant resistance of Hungarian troops and civilians. Approximately 25,000 Hungarians and 7,000 Russians were killed. One unfortunate aspect of the debacle was the stimulus of American broadcasting programs that led the patriots to believe that the U.S. would come to their aid.

1956, November 5–30. Unrest and Flight. Resistance and strikes persisted despite ruthless Soviet suppression. By the end of the month over 100,000 refugees had fled to the West.

Poland

A Communist people's republic since 1947, when Stalin's repudiation of the free election promised at the Potsdam Conference brought a Communist puppet government into being, under the protection of Soviet occupation forces, Poland was an uneasy satellite of the U.S.S.R. during the period. Persecution of the Catholic Church and imprisonment—until 1956—of **Stefan Cardinal Wyszynski** added to the tension between the Polish people and their government.

1949. Russian Commands Army. Soviet Marshal **Konstantin Rokossovski** was appointed Minister of Defense and Commander in Chief of the Polish army.

1950, June 7. Frontier Agreement with East Germany. The Oder-Neisse line was accepted as the official boundary.

1956, June 28–29. Workers' Revolt in Poznan. This was suppressed by Russian troops and brought death to over 50, injury to hundreds more, and imprisonment of more than 1,000 persons. Unrest in Poland continued and tension mounted between people and Soviet occupation army.

1956, October. Wladyslaw Gomulka Becomes Premier. The moderate Polish Communist leader was released from jail and restored to party leadership. This reduced tension and unrest, brought amelioration of conditions, and slackening of Soviet restrictions. Gomulka defied Khrushchev's warnings that democratization was too rapid. Cardinal Wyszynski was released; cultural and financial relations with the West were initiated. Soviet Marshal Rokossovski was dismissed as Polish defense minister.

1956, November 18. Agreement with U.S.S.R. Poland was given greater independence.

1957, October 3. Riots in Warsaw. Suppressed by police and troops.

1970, December 15–20. Civil Disturbance.

Widespread disorders throughout much of Poland, particularly in the north, caused the death of more than 300 people in clashes between mobs and troops. Communist party Secretary **Wladyslaw Gomulka** resigned and was replaced by **Edward Gierek,** who ended the disturbances by promising revised economic policies.

East Germany

1949, October 7. Establishment of German Democratic Republic. Otto Grotewohl was established as Chancellor of this new Soviet satellite.

1953, June 16–17. Anti-Communist Riots in East Berlin and East Germany. These were suppressed by the Soviet Army.

1953, August 23. Soviet Moves to Strengthen Ties with East Germany. This included release of war prisoners, lowering of occupation costs, and an intensive propaganda campaign. The U.S.S.R. returned to East Germany 30 factories which had been seized as reparations after World War II (December 31). It was announced that all reparations were ended, and that further occupation costs would be limited to 5 percent of East Germany's national income.

1954, March 26. U.S.S.R. Announces East German Sovereignty. Soviet troops were to remain only for security functions and for the fulfillment of Soviet obligations under the Potsdam Agreement.

1955, January 10. Defections to West. The West German Refugee Ministry reported that 184,198 persons had left East Germany for the West in 1954.

1956, January 18. East Germany Rearms. Parliament approved creation of a defense ministry and a people's army.

1964, January–March. Air Incidents. Soviet aircraft shot down an unarmed U.S. reconnaissance plane (March 10) and an Air Force jet training plane which by mistake flew over East Germany (January 28). Both the U.S. and the U.S.S.R. protested.

1972, December 21. Treaty with West Germany. **(See p. 1379.)**

Czechoslovakia

1948, February 24. Communist Coup d'État. President **Eduard Beneš** was forced to accept an ultimatum of Premier **Klement Gottwald,** putting Communists in charge of all branches of the government except the Foreign Ministry, where **Jan Masaryk** remained Foreign Minister, but all his aides were Communists.

1948, March 10. Death of Jan Masaryk. The Communist government announced this was suicide. There is little doubt that he was murdered by the Communists.

1968, July 15. Czechoslovakia Demands Revision of Warsaw Pact. Increasing coolness between the Kremlin and the "democratic" Communist government of Prime Minister **Alexander Dubcek** led the Czechs to request assurances that the treaty would not be used for political purposes, but only for the defense of Eastern Europe against foreign military aggression. A subsequent meeting of Czech and Soviet political leaders in the border town of Cernia did not reduce the tension.

1968, August 20. Warsaw Pact Invasion. Soviet, East German, Polish, Bulgarian, and Hungarian forces in overwhelming strength (at least 500,000 men) met little resistance as they occupied the country and deposed the government of Prime Minister Dubcek. After a safely pro-Soviet Communist government was firmly installed in power, most of the invading troops were withdrawn (beginning in October), but a garrison of several Soviet divisions (totaling more than 65,000 troops) remained.

Yugoslavia

1946, March 24. Capture of General Draja Mikhailovich. He was tried and executed by a firing squad in Belgrade (July 17).

1946–1948. Intervention in Greece. Yugoslavia supported the rebels in the Greek Civil War (see p. 1387).

1947–1953. Crises over Trieste, **(See p. 1380)**

1948, June 28. Yugoslav-Soviet Rift. The Cominform denounced Marshal **Tito** and the Yugoslav Communist party for putting national interests above party interests. Tito and the Yugoslav Communist party, insisting that they were still Communists, also insisted that they were Yugoslav Communists and not Russian satellites. This marked the end of Yugoslavia's role as a Soviet satellite and the beginning of completely independent existence, although under President Tito the nation remained definitely, although individualistically, Communist.

1949, August–September. Yugoslav-Soviet Crisis. Each nation accused the other of preparing for war, and Russia denounced the 1945 treaty of friendship and mutual assistance with Yugoslavia (September 29).

1953, June 1. Political Commissars Abolished in the Armed Forces. This was announced by Marshal Tito personally.

1956, October 15. U.S. Assistance. Eisenhower authorized continuance of U.S. economic aid to Yugoslavia, but withheld heavy military equipment pending further study.

1956, November 11. Renewed Difficulties with U.S.S.R. This resulted from a Tito speech at a party meeting.

1961, October 13. U.S. Military Assistance. The U.S. confirmed that it was granting military aid to Yugoslavia, to include 130 jet fighter planes, and the training of Yugoslav fighter pilots in the United States.

Albania

1946, October 22. Corfu Channel Incident. Two British destroyers were damaged by Albanian mines in the Corfu Channel, with 40 men killed or missing. (Earlier in the year, Albanian shore batteries had fired at British and Greek warships in the channel.) Britain cleared the mines from the channel, under naval protection, despite Albanian protests to the U.N. (November 12–13). The U.S.S.R. vetoed a Security Council resolution blaming Albania for the damage (March 25, 1947). In subsequent litigation before the Court of International Justice, Albania was found at fault (April 9, 1949).

1961, December 19. Diplomatic Relations with U.S.S.R. Broken. This was a protest against de-Stalinization. Albania became the first European satellite of Communist China.

Rumania

1966, May 10. Soviet-Rumanian Tension over Warsaw Pact. Cautious Rumanian moves toward a policy independent of the U.S.S.R., and suggestions that the terms of the Warsaw Pact be changed, led to a visit to Bucharest by Soviet Communist party First Secretary Leonid Brezhnev for discussion with independence-minded Rumanian First Secretary **Nicholas Ceausescu.** The result was a reduction in the stridency of Rumanian assertions of independence.

1968, August 20. Rumanian Nonparticipation in Invasion of Czechoslovakia. Apparently the Rumanian government was not informed of the Warsaw Pact plan.

MEDITERRANEAN AND SOUTHEASTERN EUROPE

Greece

1944, December 3–January 11, 1945. Guerrilla Warfare. Communist resistance groups attempted to overthrow the reestablished legal government of Greece, then under the protection of British occupation forces. British troops suppressed the uprisings and established an uneasy truce between the rival factions.

1945, September 1. Monarchy Restored. The Greek people voted to return King **George II** to the throne.

1946, May–1949, October. Greek Civil War. Communist rebels under General **"Markos"**

Vafiades, with support from Albania, Yugoslavia, and Bulgaria, seized control of major northern border regions, while fighting flared throughout the nation. The Greek government received some support from Britain at the outset, but was barely able to maintain control of major cities and some portions of the countryside. Fighting was particularly intensive in the Vardar Valley.

1946, December 10. U.N. Begins Investigation. The Security Council began an investigation into Greek charges that Yugoslavia, Bulgaria, and Albania were supporting guerrilla forces on Greece's northern frontier. The Balkans Investigating Committee reported to the Security Council (May 23, 1947) that Yugoslavia, Bulgaria, and Albania had violated the U.N. Charter by aiding guerrilla uprisings in Greece.

1947, March 12. Truman Doctrine. Britain, close to economic collapse, was forced to suspend its assistance to Greece. President Truman announced American determination to assist Greece and Turkey against internal and external Communist threats. This resulted in extensive economic aid and provision of military equipment to the strife-torn nation. An American military advisory group trained the Greek Army in employment of U.S. military equipment, and also rendered combat advice. The Greek Army slowly regained the initiative, and suppressed the revolt throughout all of Greece (1947) save in the northern border regions, where rebels obtained direct assistance from the neighboring Soviet satellites.

1948, January 1. Relief of Konitsa. Greek government troops relieved Konitsa, long under rebel siege, driving the defeated guerrilla forces into Albania. A subsequent rebel effort to capture Konitsa was repulsed (January 25).

1948, June 19. Greek Army Offensive Begins. Greek efforts to capture the rebel stronghold of Vafiades were partially successful. Intensive fighting continued for several months in the **Mt. Grammos** region.

1948, November 27. U.N. Condemns Greece's Neighbors. The General Assembly condemned Albania, Bulgaria, and Yugoslavia for continuing to give assistance to the Greek guerrillas. In fact, however, Yugoslav assistance had declined rapidly after her expulsion from the Cominform (see p. 1367). This greatly facilitated the task of government troops.

1949. General Markos Replaced. Markos Vafiades was replaced as commander of the Greek guerrillas by **John Ioannides.**

1949, June 25. U.N. Charges against Bulgaria. The U.N. Special Committee on the Balkans accused Bulgaria of permitting Greek guerrillas to establish fortifications within Bulgaria from which to fire on Greek troops in Greek territory.

1949, August 28. Greek Troops Clear Mt. Grammos. The principal rebel resistance in Greece was broken by a government assault which captured the northern ridge of Mt. Grammos.

1949, October 16. End of the Civil War.

1951, September 20. Greece Joins NATO.

1954, August 9. Treaty with Turkey and Yugoslavia. This was a 20-year treaty for military assistance and political cooperation, and marked a remarkable *rapprochement* among old enemies.

1955–1965. Strained Relations with Turkey. This was due to the Cyprus issue (see p. 1390).

1955–1959. Strained Relations with Britain. This was due to Cyprus (see p. 1390).

1967, April 21. Military Coup d'État. A junta of right-wing army officers, led by Colonel **George Papadopoulos,** seized control of the government to prevent elections which might have brought a leftist government to Greece under **George Papandreou.** The military leaders set up a puppet civilian government and claimed the support of King **Constantine,** who appeared unenthusiastic about the coup.

1967, December 13. Failure of King Constantine's Attempted Countercoup. A broadcast appeal failed to arouse popular and military support to overthrow the junta; Constantine fled by air to exile in Rome. Papadopoulos, with junta approval, appointed himself prime minister of a completely military government.

1973, June 1. Greece Becomes a Republic.

Papadopoulos proclaimed himself president. A popular referendum, held under strict military control, approved (July 29).

1973, November 25. Military Coup d'État Ousts Papadopoulos. A period of popular unrest, in which President Papadopoulos made some concessions to demonstrators, led militant right-wing military leaders, under secret police chief, Brigadier General **Demetrios Ioannides,** to seize control. Papadopoulos was placed in house arrest and replaced as president by Lieutenant General **Phaidon Gizikis.**

1974, July. Tension over Cyprus. **(See p. 1391.)**

1974, July 24. End of Military Dictatorship. The military junta turned control over to former Premier **Constantine Karamanlis,** who returned to Greece from self-imposed exile.

Malta

1964, September 21. Independent Malta Guarantees British Bases. Becoming independent, Malta joined the British Commonwealth and guaranteed bases for British forces for 10 years.

1972, March 26. Treaty Renews British Base Rights. After demanding British and NATO withdrawal from Malta, and threatening to allow Soviet military forces to use facilities on Malta, Prime Minister **Dom Mintoff** agreed to a treaty extending limited British base rights for 7 years in return for $260 million.

Turkey

1945–1947. Tension between Turkey and U.S.S.R. The Soviets unsuccessfully used diplomatic pressure and threats of force to gain concessions from Turkey in the Straits area and in Turkish Caucasus regions.

1946, August 12. Soviet Demands Dardanelles Rights. The U.S.S.R. demanded joint control of military bases along the Dardanelles, and proposed to Turkey that only Black Sea countries share in the administration of the Turkish Straits. Turkey rejected the Soviet demands (October 18).

1947, March 12. Truman Doctrine. American economic assistance and military equipment greatly strengthened Turkish resistance to Soviet pressures.

1950, September 20. Korean War. Turkey sent a major contingent (initially 4,500 men, later increased to about 8,000) to join the U.N. forces in Korea.

1951, September 20. Turkey Joins NATO.

1955–1965. Strained Relations with Greece over Cyprus. **(See p. 1390.)**

1955, September 6. Anti-Greek Riots. Riots against the Greeks broke out in Istanbul and Izmir as a result of troubles between the Greek and Turkish inhabitants in Cyprus and anti-Turkish demonstrations in Greece.

1957, October 8. Border Clash with Syria. This, like several previous incidents, arose from Syrian smuggling. This incident heightened tension which already existed, and was followed by other clashes (November 4, 9).

1960, April 28–May 21. Civil Disorder. Widespread rioting by students was put down by police and army with some bloodshed. Martial law was declared, but protests continued. Students from the Military Academy joined in protests, defying martial law (May 21).

1962, February 27. Attempted Coup. A Military Academy mutiny was suppressed without bloodshed.

1963, January 21. Nuclear Weapons Agreement with U.S. Turkey accepted U.S. offers to station Polaris missiles submarines in the Mediterranean Sea to replace Jupiter missiles stationed on Turkish soil. (Italy simultaneously agreed to the withdrawal of Jupiter missiles from Italian soil.)

1963, May 20. Attempted Coup. A Military Academy mutiny was suppressed with some bloodshed.

1964, August 7–9. Air Force Intervention in Cyprus. **(See p. 1390.)**

1966–1967. Intermittent Tension with Greece over Cyprus.

1971, March 12. Army Ultimatum Forces Government Change. Military leaders threatened to take over the government unless a strong coalition government was established

to replace that of Prime Minister **Suleyman Demirel,** who had been unable to control sporadic unrest and violence. At the same time, several high-ranking officers who had favored an immediate coup were forced to retire. Prime Minister **Nihat Erim** established a coalition government two weeks later.

1974, July 20. Turkish Invasion of Cyprus. **(See p. 1391.)**

Cyprus

For more than 70 years Cyprus was a British dependency or colony. The population of this east-Mediterranean island is about 80 percent Greek and nearly 20 percent Turkish. Long before World War II, there was a strong sentiment among the Greek population for *enosis,* or union with Greece. This was bitterly opposed by the Turkish minority, who believed that if under Greek control they would be deprived of the rights they enjoyed under British rule.

1952–1959. Guerrilla Warfare. Greek agitation for *enosis* was translated into terrorism directed against the Turkish minority, and guerrilla warfare combined with terrorism waged against the British occupation forces. Principal guerrilla leader was a Greek war hero, Colonel **Grivas.** Complete support to the *enosis* movement was given by Greek Orthodox Archbishop **Makarios,** who was exiled by the British.

1959, March 13. Cease-Fire in Cyprus. This followed an agreement between the British government and the Greek and Turkish communities on Cyprus, with the approval of Greece and Turkey (February 19). An independent republic of Cyprus was to be established, in which the rights of the Turkish minority would be clearly and constitutionally protected. Britain was to retain military bases on the island.

1959, December 14. Makarios Elected First President of Cyprus.

1960–1963. Agitation for *Enosis* Continues. Tension increased between the Greek and Turkish communities.

1963, December 21. Outbreak of Conflict. As a result of Makarios' efforts to reform the constitution and thus reduce the rights of the Turkish minority, armed clashes between Greeks and Turks spread throughout the island. Britain sent reinforcements to attempt to restore order, but widespread fighting continued.

1964, January–February. Unsuccessful Mediation. British and American efforts to establish an international peace-keeping force, under NATO or the U.N., were all rejected by Makarios, who meanwhile was building up his military forces.

1964, March 4. U.N. Intervention. After an impasse had been reached in U.N. discussion, the Security Council authorized Secretary General **U Thant** to establish a peace force and to appoint a mediator.

1964, March 27. A U.N. Peace Force Becomes Operational.

1964, August 7–9. Turkish Air Attacks. Following Greek Cypriote attacks on Turkish Cypriote villages, Turkish planes attacked Greek Cypriote positions. With Greece and Turkey close to war, the U.N. was able to get agreement of the Turkish and Cypriote governments to a cease-fire.

1966, August. Renewed Threats of Turkish Intervention. Unhappy over the condition of Turkish Cypriots in the uneasy stalemate on Cyprus, Turkey again threatened military intervention. Upon appeal from U.N. Secretary General U Thant, President Archbishop Makarios lifted restrictions which had been imposed upon Turkish Cypriots.

1967, November. Greek-Turkish Tension over Cyprus. Danger of war was averted by American mediation and strong pressures on Greece and Turkey. Greece began to withdraw its troops from Cyprus following the resultant agreement.

1974, July 15. Military Coup d'État. The Greek Cypriot National Guard, under leadership of Greek officers from Greece, and obviously abetted by the Greek military government, seized power. Archbishop Makarios (who had been reelected president on February 8, 1973) fled the country.

1974, July 20. Turkish Invasion. To forestall expected plans of the new Greek Cypriot government for "Enosis" (union) with Greece, Turkey seized the north coast of the island. Greece mobilized, but the military government of that country recognized its military weakness, combined with lack of popular support at home, and returned the government of Greece to civilian control (see p. 1389).

1974, July–August. Turkish Occupation Zone Expanded. Paying little attention to a series of cease-fire arrangements negotiated in the United Nations, Turkish forces expanded their control over the northeastern third of the island, establishing a *de facto* division of Cyprus into Greek and Turkish zones.

THE MIDDLE EAST

Unrest permeated the entire area, due to a unique combination of powerful and emotional forces: Cold War pressures, manifested in all parts of the world, particularly intense in this region due to its strategic geographic location and the untold wealth of vast oil reserves; aspirations of new nations breaking away from western colonialism; and the particularly virulent and irreconcilable strife between Israel and the Arab world. Least affected by these swirling tides within the region were the 2 non-Arab Moslem states of the region, Iran and Turkey.

The Arab League

The Arab League was established shortly before the end of World War II (March 22, 1945) by the governments of Egypt, Iraq, Jordan, Lebanon, Saudi Arabia, Syria, and Yemen. The principal purpose was to prevent the British mandate in Palestine from becoming a separate and independent Jewish state. Later the League was joined by Algeria, Kuwait, Libya, Morocco, the Sudan, and Tunisia. Cairo has been the headquarters for the Secretary General of the League.

1947, January 5. Palestinian Talks. The Arab League accepted a British proposal to participate in a conference on the Palestinian problem to begin on January 26.

1948–1949. War with Israel. **(See p. 1334.)**

1950, June 17. Collective Security Pact. Egypt, Saudi Arabia, Syria, Lebanon, and Yemen signed a collective security pact in Alexandria. Iraq and Jordan did not join.

1954, June 11. Egypt and Saudi Arabia Reject Baghdad Pact. Under the terms of the Arab League Collective Security Pact, Egypt and Saudi Arabia agreed to pool defenses and military resources, rejecting western plans for a Middle East Defense Treaty against Communism (see below).

1956, March 3–11. Egypt, Syria, and Saudi Arabia Plan United Defense. Plans for combined action against Israel were agreed on by the heads of state at Cairo. King Hussein of Jordan refused to give up British subsidy.

1964, January 13–17. Arab League Conference. Leaders of the 13 Arab League nations met in Cairo and agreed to set up a joint military command for possible action against Israel.

1965, May 13. Severance of Diplomatic Relations with Germany. This was in protest over West Germany's recognition of Israel. Ten

states (out of 13) participated: UAR, Jordan, Iraq, Syria, Lebanon, Yemen, Saudi Arabia, Algeria, Kuwait, and Sudan. Tunisia, Libya, and Morocco abstained.

1966, March 14. Arab League Conference in Cairo. Twelve of 13 members were represented; Tunisia was boycotting Arab League activities because of failure to consider compromise accommodations with Israel. The meeting agreed: (1) to continue severance of diplomatic relations with West Germany because of its recognition of Israel; (2) to denounce U.S. Arms shipments to Israel as endangering U.S.-Arab relationships; and (3) to raise money for a project to divert the Jordan River from Israel.

1966, December 10. Arab League Defense Council Agreements. Saudi Arabian and Iraqi troops, with Jordanian approval, were to be deployed in Jordan to bolster defenses against Israel. Jordan simultaneously announced that this agreement was conditioned upon UAR troops replacing U.N. forces in the Sinai and Gaza Strip, which in turn would require UAR withdrawal from Yemen. Jordan refused to permit Syrian troops or Palestine Liberation Organization (PLO) guerrillas in Jordan.

Central Treaty Organization of the Middle East

The Central Treaty Organization of the Middle East was a successor organization to the Middle East Treaty Organization, or Baghdad Pact, established (1955) as a result of initiatives begun by the United States (1954).

1954, April 2. Turkey-Pakistan Treaty. Signing a 5-year mutual-defense pact, the 2 nations invited neighboring nations, particularly Iraq and Iran, to join.

1955, February 24. Turkey-Iraq Treaty. A 5-year mutual-defense pact with a 5-year renewal clause, joined by Britain (April 4), to establish so-called Baghdad Pact.

1955, November 21. First Meeting of the Baghdad Pact. Representatives of Iran, Iraq, Pakistan, Turkey, and Great Britain met in Baghdad to establish the Middle East Treaty Organization (METO). The U.S. did not join, but sent official observers to the meeting.

1956, April 19. U.S. Partial Participation. At a meeting in Teheran, the U.S. agreed to establish a permanent liaison office, and to help support the permanent METO secretariat.

1959, March 5. U.S. Treaties with the "Northern Tier." The U.S. signed separate defense treaties with Iran, Turkey, and Pakistan, in Ankara, to assure the nations of the Baghdad Pact that the U.S. would come to their support in need of any Communist aggression.

1959, October 7. Reorganization of the Alliance. In view of the withdrawal of Iraq (see p. 1398), the remaining members—Britain, Turkey, Pakistan, and Iran—changed its name to Central Treaty Organization (CENTO).

Palestine and Israel

1945–1948. Guerrilla Warfare in Palestine. This bitter and bloody struggle was waged mainly by Jewish Zionists against the Arab population and against British occupation forces, in their efforts to achieve an independent Jewish nation. U.N. efforts to solve rival aspirations of Jews and Arabs proved futile.

1947, November 29. U.N. Decision to Partition Palestine. The General Assembly approved a plan presented to it by a special committee to partition Palestine into separate Jewish and Arab states effective October 1, 1948. The Arab states refused to accept the decision, and announced their determination to fight if necessary.

1948–1949. Arab-Israeli War. **(See p. 1334.)**

1948, May 14. Independence of Israel. Britain surrendered her mandate over Palestine and

withdrew her armed forces. The Israeli nation, immediately recognized by the U.S., was at once attacked and invaded by troops of Egypt, Iraq, Lebanon, Syria, and Transjordan (or Jordan).

1950, May 19. Egypt Closes Suez Canal to Israel. Israeli ships and Israeli commerce were banned.

1951, April 5–16. Border Hostilities with Syria. A cease-fire was later reestablished (May 8).

1953–1956. Intermittent Frontier Clashes. Both sides appear to have been responsible for these various small and large outbreaks along the entire length of Israel's frontiers. However, the initiative appears in most cases to have been with the Arabs. Israeli punitive reprisals were largely stimulated by Arab breaches of the truce or by clandestine raids of Arab terrorists into Israel.

1955, December–1956, October. Increasing Tension along Israel's Borders. Raids of Arab terrorists and guerrillas were met by stern Israel punitive strikes at Egyptian, Syrian, and Jordanian border positions. Arab states, supported by the U.S.S.R., complained in the U.N., as tempers and emotions rose (see p. 1340). Both Israel and Arabs complained of U.S. arms shipments to the other side.

1956, October 29. Israel Strikes First. Hastily mobilized Israeli forces, commanded by General **Moshe Dayan,** plunged into the Sinai. Efficient mechanized columns scattered 4 Egyptian divisions in dismal, headlong rout. At cost of 180 men killed, the Israeli invasion pushed toward the Suez Canal, halting only 30 miles away when France and Britain gave both Egypt and Israel a 12-hour ultimatum to end hostilities (October 30), and then intervened (see p. 1342). U.N. denunciation of Israel, Britain, and France followed. Egyptian losses reported by Israel were 7,000 prisoners and an estimated 3,000 dead. Practically all the Egyptian equipment and matériel (worth $50 million) in the Sinai fell into Israeli hands.

1956, November 15. U.N. Intervention. (See p. 1368.) A curtain of U.N. troops moved into the Sinai between the adversaries. The Israeli invaders slowly retired to the Negev (March 1957), only after U.S. assurances of rights to use the Gulf of Aqaba as an international waterway. A U.N. unit occupied Sharm el Sheikh, overlooking the gulf entrance, which had been captured by the Israelis.

1956–1965. Continuing Tension. Frontier skirmishing continued along Israel's frontiers, with the economic boycott of the Arab League continuing, and growing threat of war over water rights in the Jordan River system. The Arab states, particularly Egypt, were already building up strength in hopes of revenge, obtaining plentiful Soviet equipment.

1962, September 26. U.S. Assistance to Israel. The State Department announced that the United States had agreed to sell defensive missiles to Israel in order to restore the threatened balance of power in the Middle East.

1965, January 30. German Military Equipment to Israel. As part of an agreement between West Germany and Israel, following German recognition of Israel, shipment began of some $80 million worth of military equipment, including helicopters, submarines, antiaircraft guns, and U.S.-made M48 "Patton" tanks. There were strong complaints by the Arab states, which threatened to recognize Communist East Germany if the shipments continued. Germany stopped the shipments, but not before most of the Arab states had broken diplomatic relations (see p. 1391).

1966, February 5. United States Assumes Responsibility for Arms to Israel. The U.S. took over the former West German obligation, to maintain arms "stabilization" in the Middle East, in the light of continuing Soviet arms shipments to Egypt and Syria. Included in the American shipments would be 200 M48 tanks. Soon afterward (May 20) the U.S. revealed that, in accordance with its stabilization policy, it was also providing A-4 Skyhawk tactical aircraft to Israel.

1969, December 25. Israeli Seizure of Embargoed Gunboats from France. Five fast missile gunboats, being constructed in France under contract with Israel, were held by the French government following President de

Gaulle's embargo on all arms shipments to Israel as a result of the 1967 Arab-Israeli War. In a daring feat, Israeli crews secretly seized the vessels and took them to Haifa, arriving New Year's Eve.

1970, January 9. Israel Protests French Aircraft Sale to Libya. **(See p. 1434.)**

1972, January 13. U.S.-Israeli Arms Assistance Agreement Revealed. By this agreement (November 1971) Israel was authorized to manufacture various kinds of American weapons and equipment, as part of the U.S. stabilization policy.

Egypt—United Arab Republic

1945–1952. Internal and Anti-British Unrest. Egypt called for an end to British military occupation and abrogated its treaties with Britain (October 27, 1951). The U.K. acquiesced and began withdrawal, but rioting at Port Said and Ismailia, endangering Suez Canal operations, necessitated British military action and continued occupation.

1948–1949. Arab-Israeli War. **(See p. 1334.)**

1949–1956. Continuous Friction and Incidents along Israeli Border. **(See above.)**

1952, July 22. Military Coup d'Ētat. King **Farouk** was dethroned by a military uprising under the leadership of General **Mohammed Naguib,** his right-hand man being Colonel **Gamal Abdal Nasser.**

1953, June 18. Egypt Proclaimed a Republic. Naguib became first president and premier.

1954, February 25–November 14. Naguib-Nasser Struggle for Control. After considerable internal maneuvering, Naguib was finally ousted and replaced by Nasser (November 14).

1955, September 27. Agreement with Czechoslovakia. Nasser announced a commercial agreement to exchange Egyptian cotton for armaments. He stated that western nations had refused Egyptian requests for arms and that Israel was buying French warplanes.

1955, October 20. U.S. Offers to Finance Aswan Dam. Egypt accepted financing by the International Bank for Reconstruction and Development and the U.S. (December 1955–February 1956), rejecting Soviet offers to supply more than ⅓ of the $.6- to $1.2-billion cost.

1956, June 13. Britain Completes Withdrawal from Egypt. This ended 74 years of British military occupation in Egypt.

1956, June 18. Soviet Renews Offer to Finance Aswan Dam. This time the U.S.S.R. agreed to furnish about $1.0 billion at 2 percent interest. President Nasser began to reopen bargaining with the U.S., Britain, and IRDB to get better terms.

1956, July 19. U.S. Withdraws Offer to Finance Aswan Dam. Disgusted by Egyptian anti-U.S. propaganda and negotiations with the U.S.S.R., Secretary **Dulles** withdrew the offer; Britain supported the U.S. action.

1956, July 26. Nationalization of Suez Canal. Egypt seized control of the canal from the private (primarily British) Suez Canal Corporation, announcing its nationalization. Hot debate in and out of the U.N. followed; France and Britain particularly considered the action as a threat to world peace. The U.S. was gravely concerned and began negotiations to achieve international control. The Communist bloc supported the Egyptian seizure. Nasser turned down western proposals and began to operate the canal (September 14).

1956, October 29. Israeli Invasion of Sinai. **(See p. 1340.)**

1956, October 31. Franco-British Intervention. Following Israel's assault in the Sinai, France and Britain issued an ultimatum calling on Israel and Egypt to cease fire in 12 hours. Israel accepted subject to Egyptian acceptance (October 30). Egypt rejected the ultimatum. Franco-British air forces began bombardment of Egyptian air bases.

1956, November 5–7. Franco-British Invasion of Canal Zone. British paratroops, flown by helicopter from Cyprus, made vertical combat landings at Port Said while Franco-British warships bombarded the port and landed troops in an amphibious assault. One day of street fighting brought the port into the attackers' hands, and the advance continued along the canal. Egyptian resistance concentrated on the sinking of stone-laden barges and

other vessels in the canal itself, completely blocking it. Immediate U.N. reaction followed, with the U.S. and U.S.S.R. for once in agreement. A cease-fire demand was reluctantly obeyed by France and Britain (November 7). By this time the northern half of the canal, from Port Said to Ismailia, had fallen into the invaders' hands. Allied losses were 33 dead and 129 wounded; Egyptian losses are unknown. Following U.N. pressure and unilateral U.S. efforts, the Franco-British forces evacuated Egyptian territory (November 19–December 22).

COMMENT. *While U.S. denunciation of this bilateral assault, and the threats of the U.S.S.R. to use missiles against Britain and France and to furnish a "volunteer" army for the relief of Egypt, both played dominant roles in causing France and Britain to withdraw, a very practical military reason also underlay the decision. What might have become a* fait accompli, *had the operation been properly prepared, became a disastrous fumble when, due to inadequate warning and preparation, 5 inactive days elapsed between the initial air bombings and the amphibious assault. World opinion had time to react. The net result was a strengthening of Nasser's domination in Egypt and his affiliation with the U.S.S.R., and a weakening of accord amongst NATO members.*

1957, March 7. Suez Canal Reopens. U.N. salvage crews took only 69 days to clear hulks from the channel, sunk there by Egyptians during the crisis.

1958, February 1. Union with Syria. The United Arab Republic was established with Yemen as another partner. This was Nasser's next move to dominate the Middle East by a powerful Arab state. Anti-Egyptian opposition in Syria broke up the short-lived partnership (September 30, 1961), but Nasser's Egypt continued as the United Arab Republic.

1961–1967. Involvement in Yemen. Breaking relations with the monarchical government of Yemen (December 26, 1961), Egypt began subversive support of a republican movement, followed by active military support of the republican government against the Imam (see below). Egyptian losses were heavy; the experience was frustrating and costly to Egypt. Egyptian troops were withdrawn after the Sinai defeat at the hands of Israel, to bolster Egypt's defense of the Suez Canal.

1964, May 26. Planned Unification with Iraq. President Nasser and Iraq's President **Abdel Salim Arif** signed an agreement in Cairo to establish a joint Egyptian-Iraqi military command in time of war, and to appoint immediately a joint presidential council to study ways of unifying the two governments.

1967, June. War with Israel. **(See p. 1343.)**

1970, September 28. Death of Nasser. This was the result of a heart attack.

1970, October 7. Sadat Appointed President. Vice President Anwar Sadat, a loyal assistant of Nasser, was appointed president by Egypt's National Assembly. This was confirmed by a national plebiscite (October 14).

1971, May 13. Sadat Purges Opponents. A coalition of militant anti-Israel and pro-Russian politicians, disappointed by Sadat's political moderation and skillful consolidation of government control, had been plotting to replace him when the president quickly dismissed and jailed dissident government leaders.

1971, May 28. Treaty of Friendship and Cooperation with the U.S.S.R. Signed in Cairo by President Sadat and President **Nikolai Podgorny** of the U.S.S.R., this assured continuing Soviet military assistance, but without the danger of a Communist takeover after Sadat had consolidated his political power by purging pro-Russian elements from his government (see above).

1971, August 20. Agreement for Union with Syria and Libya. This agreement theoretically went into effect when referenda in the 3 countries enthusiastically confirmed the agreement (September 1). Since each nation retained its national sovereignty, the agreement was virtually meaningless.

1972, July 18. Sadat Orders Withdrawal of Soviet Advisors. Sadat said that the decision to "terminate the mission of the Soviet military advisors and experts" was due to Soviet failure to provide arms for renewed war with Israel. Moscow announced that the withdrawal was by mutual agreement. Not all Soviet advisors were withdrawn, however.

1972–1973. Agreements for Union with Libya. (See p. 1434.)

1973, October 6–22. War with Israel (see p. 1348).

YEMEN

1948, February 19. Revolt. King **Hamid** was overthrown and replaced by Imam **Ahmed.**

1950, June 17. Yemen Joins Arab League Collective Security Pact. (See p. 1391.)

1954, May. Border Clashes with Aden.

1955, April 2–5. Military Revolt. Imam **Seif el-Islam Ahmad** and Crown Prince **al Badr Mohammed** and loyal tribesmen defeated an army revolt led by Emir **Seif al-Islam Abdullah.**

1956, April 3. Claim to Britain's Aden Protectorate. The nebulous boundary line became theater of a sporadic war continuing to the end of the period.

1957–1962. Communist Arms Provided to Yemen. This was through negotiations with the U.S.S.R. and later with Red China. The U.S.S.R. began extensive port construction at Hodeiya (Port Ahmed).

1961, December 26. U.A.R. Breaks Relations with Yemen. (See p. 1395.)

1962, September 19. Death of Imam Ahmed. Crown Prince **Saif al-Islam Mohammed al Badr** assumed the crown. A republican uprising followed.

1962, September 27. Proclamation of "Free Yemen Republic." The rebel government, supported by the U.A.R., was also recognized by Communist-bloc nations (September 29). Heading the rebels was Colonel **Abdullah al-Sallal** (proclaimed president, October 31).

1962–1965. Civil War. The rebel government was assisted by the U.A.R. Egyptian troops entered the country to assist the rebels. With Egyptian forces waxing to some 60,000 strength by 1965, Yemen became a battleground for pro- and anti-Communist Arabs. Saudi Arabia provided active military support to the monarchical faction, while British forces resisted a republican Yemenite invasion of Aden.

1965, August 24. Saudi-Egyptian Agreement and Cease-Fire. For the third time in two years President Nasser and King **Faisal** agreed to end their support of the republicans and royalists, who also agreed to a cease-fire and to a plebiscite to determine the future government.

1966, February 22. Egypt Supports Republicans in Renewed Fighting. A republican attack on a royalist tribe was supported by U.A.R. aircraft. That same day, in a response to Faisal's appeal to withdraw, President Nasser announced that his troops would stay in Yemen until a plebiscite was held. In the outburst of renewed fighting Saudi Arabia accused U.A.R. planes of bombing Saudi towns near the Saudi-Yemen frontier.

1967, November 5. Coup d'Etat in Republican Government. President **Abdullah el-Salal** was overthrown by dissident republicans under **Rahman al-Iryani,** who assumed title of Chairman of Presidential Council. Despite Iryani's apparent intention of seeking an understanding with the royalists, the war dragged on. U.A.R. troops had been withdrawn after Egypt's disastrous defeat in the Sinai (see p. 1343).

1968, February. Southern Yemen Intervenes. Participation of troops from Southern Yemen in attacks on royalist troops was announced by both the Southern Yemen and the Yemen republican government (February 19).

1968, February 28. Saudi Arabia Renews Aid to Royalists. The Saudi government announced that this was needed to offset assistance to the republicans from the U.S.S.R., Syria, and Southern Yemen.

1970, April 14. Agreement with Saudi Arabia Ends Civil War. King Faisal's government agreed to recognize the republican government of Yemen, in return for the inclusion of a number of royalists in the government.

1972–1973. Border Clashes with South Yemen.

1974, June 13. Military Coup d'Etat. Colonel **Ibrahim al-Hamidi** was the leader of an army group seizing control.

Lebanon

1945–1956. Precarious Existence. The republic strove to maintain independent status despite the coaxing and threats of its neighbors to force its participation in the Pan-Arab movement. There was constant friction with Syria.

1949, July 8. Brief Rebellion Suppressed.

1956, January 13. Military Defense Treaty with Syria.

1958, April 14–July 14. Insurrection. This was inspired by the U.A.R. Fighting spread to the streets of Beirut (June 14). U.N. observers, with **Dag Hammarskjöld,** secretary general, arrived.

1958, July 14. Lebanese Appeal for Help. President **Camille Chamoun** appealed to the U.S., Britain, and France, urging troop aid to seal the Syrian border as the revolution in Iraq (see p. 1398) set the Middle East aflame and stimulated renewed unrest in Lebanon.

1958, July 15. U.S. Intervention. Responding to Chamoun's appeal, a U.S. force of Marines and Army troops arrived by sea and by air from Europe and the U.S. to protect Lebanon from U.A.R. or Communist invasion.

1958, August 21. U.S. Begins Withdrawal. Stabilization of the situation having been effected, withdrawal of 14,300 U.S. troops began (completed October 25).

1961, December 31. Attempted Coup. Rightist elements, including some troops, were crushed by prompt reaction of the Army.

1969, October. Lebanese Army Clashes with Palestinian Commandos. A 6-month period of tension and occasional out-breaks of violence between Palestinian guerrillas and the Lebanese Army flared into virtual civil war. During three weeks of sporadic fighting the Palestinians seized control of 14 of 15 U.N.-operated refugee camps in Lebanon.

1969, November 3. Cease-Fire Agreement Signed in Cairo. The Lebanese government virtually accepted extraterritorial sovereignty of the Palestinian commandos. Following one more clash (November 20) an uneasy peace returned to most of Lebanon, with the Palestinian guerrillas free to continue their terrorist operations against Israel.

1973, May 2–8. Renewed Army Conflict with Palestinian Commandos. Confused fighting intensified when the Lebanese Army intercepted 1,000 guerrillas trying to cross into Lebanon from Syria. An uneasy cease-fire was finally arranged by representatives of Egypt, Iraq, and Algeria. Syria closed the border with Lebanon, denouncing the Lebanese government for conspiring with "foreign" powers in an anti-Palestinian conspiracy.

Syria

1946, April 15. Independence of Syria. A former League of Nations mandated territory under French control, Syria was granted independence in accordance with the United Nations Charter.

1948–1949. Arab-Israeli War. **(See p. 1334.)**

1949, March 30. Coup d'État.

1949, August 18. Coup d'État.

1949, December 17. Coup d'État.

1951, November 28. Coup d'État.

1953–1954, December–February. Jebel Druze Uprising. Suppressed by the Syrian Army after extensive fighting.

1954, February 25. Coup d'État.

1958, February 1. Union with Egypt. **(See p. 1395.)**

1961, September 28. Coup d'État. Elements opposed to the union with Egypt seized power.

1961, September 30. Dissolution of Union with Egypt. This was the result of the recent coup d'état.

1962, March 28. Coup d'État.

1962, April 1. Unsuccessful Military Revolt at Aleppo.

1963, March 8. Coup d'État.

1964, February 8–25. Civil Disorders. Bloody riots in Banias and Homs marked general unrest.

1964, April 13–15. Unsuccessful Insurrection in Hama. There was severe loss of life in the uprising, which apparently was aimed at overthrow of the government.

1966, February 23. Coup d'État. Premier **Salal al Bitar,** moderate leader of the Ba'ath Party, was overthrown by leftwing military dissidents of the party led by Major General **Salal Jedid.**

1967, June. War with Israel. (See p. 1343.)

1969, February 28. Coup d'État.

1970, September 19–23. Invasion of Jordan Repulsed. (See p. 1400.)

1970, November 13. Coup d'État. Right-wing army officer members of the Ba'ath party, led by Defense Minister Lieutenant General **Hafez el-Assad,** seized power.

1971, March 12. Assad Elected President. This was for a term of 7 years. Assad gave the country the most stable government it had had since independence.

1971, September 1. Union with Egypt and Libya. (See p. 1395.)

1973, October 6–22. War with Israel. (See p. 1348.)

Iraq

Internal affairs in Iraq were chaotic throughout the period. The central government (in its various manifestations) was more or less constantly at war with the Kurdish minority in the northwestern mountain region. Principal military events of the period were:

1946, April. Uprising in Kurdistan. The Kurd rebellion had not been suppressed by the close of the period.

1948–1949. Arab-Israeli War. (See p. 1334.)

1955, November 21. Baghdad Pact. (See p. 1392.)

1958, July 14. Army Revolt. An army officer revolt, led by Brigadier General **Abdul Karim el Kassim,** overthrew the monarchy. King **Faisal II** and Premier **Nuri es Said** were brutally murdered. Initially closely tied to the U.A.R. and pan-Arab unity, Kassim's Republic of Iraq soon diverged from policies followed by Nasser's U.A.R.

1958, December. Iraq-Soviet Agreement Verified. U.S. sources determined that Premier Kassim had accepted Soviet arms and had entered into a working agreement with the U.S.S.R.

1959, March 8–9. Revolt Suppressed. This was an attempt by a group of officers in **Mosul.**

1959, March 24. Iraq Withdraws from the Baghdad Pact. Soon after this, Iraq abrogated her agreements with the U.S. and refused further U.S. military aid (June).

1959, July 14–20. Unsuccessful Rebellion. A confused uprising of Kurds, Communists, Moslem factions, and army troops in the Kirkuk region was put down with heavy loss of life by loyal troops.

1961, December 27. Britain Supports Kuwait. Britain dispatched naval reinforcements to the Persian Gulf to deter Kassim's threatened annexation of Kuwait (December 24).

1961–1970. Kurd Rebellion. Refusal of the Iraqi government to provide autonomy to their mountainous home land, in the region where Iraq, Iran, and Turkey meet, led to Kurdish defiance of the central government, and the outbreak of virtual civil war (September 17 1961). The Kurds were led by Mullah **Mustafa Barzani.**

1963, February 8. Revolt. Kassim was deposed and executed; his estranged partner in the 1958 revolt, **Abdul Salam Arif,** became the new president.

1963, November 18. Military Coup. The government was overthrown; President Arif, who had been a figurehead, seized control and pledged support to Nasser of Egypt.

1965, September 17. Partial Coup d'État. General **Abdel Rahman Arif** suppressed a revolt against his brother, President **Abdel Salim Arif,** then seized control of the government himself.

1968, July 17. Coup d'État. Major General **Ahmed Hassan al Bakr** led a group of army officers of the right wing of the Ba'ath party overthrowing President Abdel Rahman Arif.

1969–1975. Border Clashes with Iran. These began with a dispute over Iraqi control of navigation of the Shatt-al-Arab (see p. 1403), and with Iranian support of the Kurds.

1970, January 20. Attempted Coup d'État. The government said the crushed rebel forces were supported by Iran.

1970, March 11. Peace with the Kurds. Iraq agreed to grant autonomy and to make constitutional reforms to grant the Kurds a major role in the central government.

1972, April 9. Treaty with the U.S.S.R. This 15-year friendship pact carried with it a promise of more Soviet arms for Iraq.

1973, March 20–21. Border Clashes with Kuwait. Iraq again backed down in the long-standing dispute after the arrival of 20,000 Saudi Arabian troops to help Kuwait.

1973, June 30. Unsuccessful Coup Attempt.

1974–1975. Renewed Kurd Rebellion. The Kurd rebellion collapsed when Iran withdrew support as a result of a resolution of its border dispute with Iraq (March 1975).

JORDAN

1946, March 22. Independence of Transjordan. This former League of Nations mandate was granted independence by Britain. Emir **Abdullah** became the first king.

1948–1949. Arab-Israeli War. Transjordan, due mainly to its British-trained Arab Legion, was the only Arab state to perform creditably against the Jewish Army of Israel (see p. 1334).

1949, June 2. Hashemite Kingdom of Jordan Established. This change of name was a step in the process of annexation of Arab Palestine (April 24, 1950), occupied by the Arab Legion during the Arab-Israeli War. This annexation was strongly protested by most other Arab League states.

1951, July 20. Assassination of Abdullah. Murder of this moderate ruler by an Arab extremist was applauded in many other Arab countries. They feared that he was moving to an accommodation with Israel. He was briefly succeeded by his eccentric son, Emir **Tallal** (September 5).

1952, May 2. Accession of King Hussein. This young king (only 17 when he came to the throne) proved himself a wise, tough, durable ruler, who maintained control over his volatile nation (with the help and support of his Arab Legion), despite continued and overt efforts of Nasser and most other Arab League leaders to have him overthrown or assassinated (1955–1962). By the end of the period, Hussein and Nasser, however, had temporarily resolved their differences and were at least nominally in accord on their strong anti-Israel policies.

1954, May 2. Jordan Rejects British Suggestion of Peace Talks with Israel.

1956, March 2. Dismissal of Glubb. British Lieutenant General **John Bagot Glubb,** commander of the British-subsidized Arab Legion, was dismissed by Hussein for failure to prepare for an Israeli attack. Upon his return to Britain, Glubb was knighted (March 9).

1958, July 17-October 29. British Support to Hussein. Following the revolt in Iraq, and as combined U.A.R. and Communist pressure and threats against Hussein and Jordan mounted, British paratroops landed in Jordan, at Hussein's request, shortly after the landings of U.S. forces in Lebanon (see p. 1397). This strong Anglo-American cooperation restored comparative stability to the Middle East.

1962. Military Coordination of Jordan and Saudi Arabia. Merger of the armed forces of the 2 countries was announced as a show of strength and unity against the U.A.R. and other Arab League members. Though never officially abrogated, this merger was apparently never fully activated and was quickly ignored.

1967, June 5–10. War with Israel. (See p. 1345.)

1967, November 6. Hussein Suggests Peace Negotiations with Israel. The King said he was ready to recognize Israel if the boundary questions could be negotiated satisfactorily. He also suggested that Egypt was ready to permit Israeli ships in the Suez Canal, once a general agreement was reached. Egypt denied this latter statement, amid a storm of protests from most Arab nations.

1968, March 21. Battle of Kerama. An Israeli

raid against Palestine guerrilla bases in the Jordan Valley was met by Jordan Army units, who claimed success in driving the Israelis off after a sharp fight.

1970, February 10–12. Fighting between Jordanian Army and Palestinian Commandos. This resulted from Palestinians' refusal to obey a Jordanian directive forbidding them to carry arms openly in public, and ordering the surrender of arms and ammunition. Both sides backed down under pressure from other Arab states.

1970, June 7–11. Renewed Fighting with Commandos. A virtual 5-day civil war was again brought to a conclusion by pressure from other Arab states and appeals to the guerrillas from King Hussein and **Yasir Arafat,** leader of Al Fatah, the largest commando group. The Jordanian Army had the better of the fighting, but losses were heavy on both sides; each accused the other of numerous atrocities.

1970, September 17–26. Open Warfare with Palestinian Commandos. Apparently believing his monarchy could not survive if the commandos continued to defy his authority and Jordanian sovereignty, Hussein ordered an all-out attack on the commando bases. Despite interference from Syria (see below), the Jordanian Army was successful and commando losses severe. A cease-fire was arranged in Cairo (September 27), with the guerrilla survivors accepting practically all of the King's demands.

1970, September 19–23. Undeclared War with Syria. Following a day of artillery fire across the border, Syrian troops, mostly armored units, invaded northern Jordan and, with Palestinian commando assistance, captured Irbid, Jordan's second-largest city. A major tank battle took place near Irbid between Jordanians and Syrians (September 22). The Jordanians completely defeated the Syrians, who retreated across the border (September 23). Jordanian close support aircraft contributed largely to the victory. Syria broke diplomatic relations with Jordan. The Syrians were deterred from further action by a partial Israeli mobilization and clear indications that Israel would attack if the Syrians renewed the war.

1971, June 13–19. Final Suppression of Palestinian Commandos. Not satisfied with the commandos' adherence to the cease-fire terms, the Jordanian Army captured some 2,000 commandos and drove the remainder out of the country into Israel and Syria. Syria again fired artillery across the border, but made no further aggressive move.

1971, November 28. Palestinians Assassinate Jordanian Prime Minister. While attending an Arab League Defense Council meeting in Cairo, Prime Minister **Wafsi Tal** was killed by 3 Palestinian gunmen, who later said they were members of the Black September Organization, a Palestinian terrorist group whose name commemorated the Jordanian 1970 attack against the commandos.

Saudi Arabia

Involved like all the other nations in the Middle East in pan-Arab, anti-Jewish movements, Saudi Arabia, one of the great oil centers of the area, could be considered as at least partly amenable in policy to the **Arabian American Oil Company** (ARAMCO), which operated the fields and was the sole source of financial revenue. The death (November 9, 1953) of King **Ibn Saud,** a firm supporter of the West, momentarily loosed its ties with the Free World. His sons, **Saud Ibn Aziz** (1953–1965) and Faisal (who deposed his brother in 1964), continued, however, in attempts to maintain at least neutrality in the Cold War.

1952. Saudi Forces Invade the Buraimi Oasis. This territory was also claimed by the Sultan of Muscat and Oman. A clash with British interests in that area ended with the ousting of the invaders (October 26, 1955) by British-led troops of Muscat and Oman.

1956. Military Alliance with Egypt and Yemen. **(See p. 1391.)**

1957–1962. Friction with U.A.R. This brought about closer ties between Saudi Arabia and Jordan (see p. 1399).

1962–1970. Saudi Arabian Support of Royalists in Yemen. **(See p. 1396.)** This intensified friction with the U.A.R.

1964, March 28. King Saud II Stripped of Royal Power. This was by decree of a royal council, led by his younger brother, Prince Faisal, who became virtual regent, with Saud a figurehead.

1964, November 2. Saud Deposed; Faisal Named King.

1969, November 26-December 5. Border Clashes with Southern Yemen. **(See p. 1402.)**

1973, March 21. Troops Sent to Support Kuwait against Iraq. **(See p. 1399.)**

1973, October. Saudi Leadership in Oil Embargo. Supporting Egypt and Syria in the October War (see p. 1348), Faisal led the Arab oil-producing states in a highly successful embargo against all nations directly or indirectly supporting Israel.

Arab Gulf States

Britain retained a shaky hegemony over the southern and southeastern regions of Arabia, from Aden to the Persian (or Arabian) Gulf. British troops were involved in frontier fighting between Yemen and the Aden Protectorate, in suppressing internal disorders in Aden, and on the southeastern fringes of the Arabian desert in desultory warfare between the Sultanate of Muscat and Oman and Saudi Arabia, centering around the disputed Buraimi Oasis. British troops also helped the Sultan of Muscat and Oman suppress a serious revolt (July–August 1957).

1952–1955. Muscat, Abu Dhabi, Saudi Arabia Dispute over Buraimi Oasis. **(See p. 1400.)**

1967, November 2. Britain Announces Planned Withdrawal from Arabia. This was to take place in 1971 (see p. 1375).

1971, July 18. Establishment of United Arab Emirates. At a meeting in Dubai, 6 Persian Gulf emirs agreed to form a federation before the planned British withdrawal at the end of the year. Participants: Abu Dhabi, Sharjah, Ajman, Umm al Qaiwain, Fujairah, and Dubai.

1971, August 14. Independence of Bahrain.

1971, September 21. Independence of Qatar.

1971, November 30. Iranian Troops Seize Persian Gulf Islands. Ras al Khaimah, which claimed the Greater and Lesser Tunb Islands, protested the seizure. Abu Musa, also seized, was claimed by Sharjah, but the Iranian government agreed to respect Sharjah's sovereignty in return for base rights on the island.

1972, January 24. Unsuccessful Coup in Sharjah. Sheikh **Khalid bin Mohommed al Qasmi** was killed and was succeeded as emir by his brother, Sheikh **Saqr bin Mohommed al Qasmi.**

1972, February 11. Ras al Khaimah Joins United Arab Emirates. This brought membership to 7 states.

1972, February 22. Coup d'État in Qatar. Sheikh **Ahmed bin Ali al-Thani** was deposed and replaced by his cousin, Sheikh **Khalifa bin Hammad al-Thani.**

Oman (Muscat and Oman)

1952–1955. Buraimi Oasis Dispute. **(See p. 1400.)**

1955, December 15. Sultan Reestablishes Authority over Oman. Sultan **Said bin Taimur** suppressed a conspiracy by the Imam of Oman, who was exiled.

1957, July–August. Imam Revolt against Sultan. The exiled Imam of Oman led a revolt against the Sultan's British-led army. After serious fighting near **Nizwa** (July 15), the Sultan requested British assistance, which was

provided, mostly in air support, resulting in suppression of the rebellion (mid-August). An Arab League effort to censure Britain in the U.N. Security Council failed (August 20).

1968–1974. Revolt in Dhofar. Separatist rebels, Marxist and supported by the People's Republic of Yemen (Southern Yemen), waged constant guerrilla war against the government. Oman employed British officers to command counterinsurgency units. This buildup and Iranian assistance (beginning 1973) suppressed the insurgency.

1970, July 23. Palace Coup. Sultan Said bin Taimur was overthrown and replaced by his son, **Qabus bin Said,** on the basis of the former's "inability" to use the new-found oil "wealth of the country for the needs of the people." The new Sultan changed the name of the country to "Sultanate of Oman."

Southern Yemen (People's Democratic Republic of Yemen)

1945–1967. British Aden Protectorate. Violence and unrest in the protectorate. Despite a UN Observer Force (established 1 June, 1963), violence continued, resulting in virtual civil war (December, 1963), with the British and local sheikhs fighting leftist revolutionaries. Britain decided to withdraw.

1964, July 4. Britain Pledges Independence to the Federation of South Arabia. At a constitutional conference in London this was promised to take place "not later than 1968." Britain planned to retain its base in Aden, one of the 13 federated states. The leftist revolutionaries continued guerrilla warfare. Britain decided to withdraw completely. (See also p. 1369.)

1967, November 30. Independence of the People's Democratic Republic of Yemen. Violence and unrest continued, as rival factions vied for power.

1968–1974. Guerrilla Warfare against Oman in Dhofar. (See above.)

1968, March 20. Attempted Army Coup.

1968, May 13–16. Unsuccessful Revolt. This was led by dissident leaders of the ruling National Liberation Front.

1968, July 26–August 9. Unsuccessful Rebellion. Tribesmen south of Yemen rose under the leadership of members of the Front for Liberation of South Yemen. The rebellion was suppressed after fierce fighting. The government said the rebels were aided by Saudi Arabia.

1969, June 22. Coup d'État. A militant leftist government seized power.

1969, November 26–December 5. Border Clashes with Saudi Arabia. Saudi Arabia claimed victory in fierce fighting for the disputed oasis of **Al Wadeiah.**

1972–1973. Border Clashes with Yemen. (See p. 1396.)

1974, August 28. U.S. Alleges Soviet Naval Base in South Yemen. President Gerald Ford stated that the Soviet Union had a naval base in South Yemen. The Soviets denied this accusation.

Iran

At the close of World War II, the U.S., British, and Soviet governments agreed to withdraw their forces from Iranian territory. The withdrawals were to be completed by March 2, 1946.

1945, November 18. Rebellion in Azerbaijan. A Communist-inspired revolt by the Tudeh party broke out. Efforts of the government to repress it were hampered by Soviet troops still in Iran. Prime Minister **Qavam** protested to the U.N. Security Council (January 19, 1946). The firm stand of the U.S. government in support of Iran brought withdrawal of Soviet troops (May 6), and the rebellion was later put down (December 6–11).

1946, September 15–October 7. Rebellion in Southern Iran. This was settled by agreement between government and rebellious tribesmen.

1951, April 29. Nationalization of Oil Industry. Mohammed Mossadegh, new Iranian premier, ordered nationalization of the oil in-

dustry. Violent repercussions in Britain and the U.S. followed, and oil production virtually ceased.

1953, August 19. Mossadegh Overthrown. The pro-Communist dictatorial prime minister was ousted and imprisoned by a coup supported by Shah **Mohammed Reza Pahlavi,** who became virtual prime minister himself.

1954, August 5. Iranian Oil Production Renewed. European and American oil interests agreed to operate the former Anglo-Iranian oil plant on a new royalty basis.

1955, November 21. Baghdad Pact. (See p. 1392.)

1969, April 19. Iran Abrogates Treaty with Iraq on Navigation of Shatt-al-Arab. Claiming that Iraq had violated provisions of a 1937 treaty giving most of the river to Iraq (and claiming the treaty was based on a series of unequal treaties imposed by Great Britain since 1847), Iran announced that it would enforce its claim to sovereignty up to the middle of the river (Arand-Rud in Iranian). Iraq massed troops on the border, as did Iran; Iran sent ships under armed escort to the ports of Abadan and Khorramshahr. There were no immediate hostilities, but this was the basis of later border clashes (see p. 1399 and below).

1969, September. Border Clashes with Iraq. (See below.)

1970–1974. Modernization of Iranian Army. A major program of military modernization, improvement, and build-up was undertaken by Shah Mohammed Reza Pahlavi.

1970, January 20. Border Clash with Iraq.

1971, November 30. Iran Seizes Persian Gulf Islands. (See p. 1401.)

1973–1974. Iranian Troops Assist Oman in Dhofar. (See p. 1402.)

1974, February 6–15. Border Clashes with Iraq. This ended a lull caused by the Arab-Israeli War.

1974, March 5–6. Border Clash with Iraq. Some 180 incidents occurred in 1973–1974.

1975, January–March. Border Clashes with Iraq. Iranian aid to the Kurds ended with signature of a boundary agreement (March 5).

SOUTH ASIA

British India

The post–World War II events in South Asia were shaped almost entirely by the division of the Indian subcontinent on religious lines at the time Britain relinquished her colonial Empire of India in 1947: the essentially Hindu Dominion of India and the essentially Moslem Dominion of Pakistan, the latter being divided into 2 separate portions, about 1,000 miles apart, separated by Hindu India. Strife and bloodshed occurred across the country during the year before partition, and intensified immediately upon independence and partition. The principal events were:

1946–1947. Violence and Unrest Sweep India. With Britain clearly preparing to give independence, violence flared intermittently across all of India between Hindus and Moslems. The fighting was particularly intense and bloody in the Punjab, almost equally divided between Mohammedan and Hindu inhabitants. During one 4-month period (July–October 1946), the British government announced that 5,018 persons had been killed and 18,320 injured in the Hindu-Moslem rioting. The toll was even heavier in the early months of 1947.

1947, August 14. Independence of India and Pakistan. India and Pakistan both received their independence simultaneously, and both became dominions within the British Commonwealth of Nations. Rioting, violence, and death increased throughout both nations, and

particularly in the Punjab. Mobs of religious majorities in both nations began to terrorize, rob, and murder the minority groups, most of whom took refuge beyond the partition frontier. After about 6 weeks of slaughter, relative peace returned, mostly because the persecuted minorities had been wiped out or chased away. No reliable statistics exist, but it is probable that close to a million people were massacred, while 10–15 million people were forced to flee from their homes.

Kashmir Dispute, 1947–1965

1947, October. Moslem Uprising in Kashmir. The decision of the Hindu Raja of Kashmir to have his state join India (October 26) precipitated an uprising of the predominantly Moslem population, who wished to join Pakistan. Afridi and Mahsud tribesmen who had crossed into Kashmir from Pakistan joined in a march on Srinagar. Indian troops were flown into Kashmir to quell the uprising (October 27). Intensive fighting broke out between air and ground forces of the Indian government and the rebellious Moslems and their supporters from Pakistan. (October 28–30.)

1947, November–1949, December. Undeclared War in Kashmir. Pakistani troops crossed the border into Kashmir to assist the Moslem rebels, precipitating an undeclared war between India and Pakistan.

1948, February 8. Pathan Uprising in Kashmir. This was suppressed by Indian troops.

1949, January 1. Cease-Fire. U.N. mediation brought about an uneasy truce along the fighting front in Kashmir, ending 14 months of warfare.

1949–1954. Intermittent Negotiations between India and Pakistan. No firm agreements were reached.

1953, August 20. Plebiscite Agreement. Sheikh **Mohammad Abdullah,** prime minister of Kashmir, and **Jawaharlal Nehru,** prime minister of India, agreed to a plebiscite to settle the dispute over the state of Jammu in Kashmir. India later withdrew its agreement and imprisoned Mohammed Abdullah.

1954, February 6. Kashmir Ratifies Accession to India. Pakistan protested.

1954, October 4. Pakistan White Paper. This declared that negotiations with India had failed and asked the Security Council to settle the problem.

1957, January 26. India Annexes Kashmir. Pakistan protested; the U.N. disapproved. Henceforward Kashmir was merely one (although one of the most important) of a number of issues between India and Pakistan.

India, 1947–1961

1947, August 14. Independence.

1948, January 30. Assassination of Gandhi in New Delhi. Rioting broke out across India.

1948, September 15–17. Indian Occupation of Hyderabad. After the Nizam of Hyderabad had refused to join the Dominion of India, Indian troops invaded and forced unconditional surrender.

1949, June–July. Disorders and Violence in Kerala. The Indian government intervened to dismiss the Communist government of Kerala State and to take direct control after widespread, bloody, anti-government riots.

1950, January 25. India Becomes a Republic. She retained membership in the British Commonwealth.

1950. Medical Unit to Korea. This was in support of the U.N. war effort (see p. 1366).

1953. Revolt in Nepal. Indian troops assisted in the suppression of a Communist-inspired revolt in Nepal.

1954–1974. Naga Revolts. India consistently refused demands for autonomy by these primitive tribesmen of the Northeast Frontier.

1954, April 29. Nonaggression Treaty with Communist China. This was *de facto* recognition of the Chinese seizure of Tibet (see p. 1429).

1954, July–August. India-Pakistan Dispute over Indus Valley Water. The dispute was settled by mediation by the International Reconstruction and Development Bank (August 5).

1954, July 22–1955, August 15. Border Clashes around Goa. Indian nationalists attempted to seize parts of the Portuguese possession, but were ejected by Portuguese troops (July–August 1954). After further violence around Goa (August 1955), India broke off diplomatic relations with Portugal.

1959, February 25. U.S. Arms Aid Rejected. Since Pakistan accepted proferred American assistance, Nehru demanded the withdrawal of U.S. members of the UN Ceasefire Commission in Kashmir.

1959, April 3. Arrival of the Dalai Lama in India. He was seeking refuge from Chinese persecution of Tibetans (see p. 1429).

1959, August 28. Border Dispute with China. Prime Minister Jawaharlal Nehru reported Chinese violations of India's frontiers with Tibet and China in the Longju and Ladakh areas.

1960, June 10. Himalayan Border Clash. India claimed Chinese troops were occupying Indian territory.

1961, March 14. Troops to the Congo. India sent troops to join the U.N. effort in the Congo (see p. 1441). The Indians were airlifted by U.S. cargo planes.

1961, December 18. Seizure of Goa. India seized the Portuguese enclaves of Goa, Damao, and Diu, which had been Portuguese possessions for 4½ centuries. There was little opposition.

Hostilities with China, October–November 1962

1962, October 20. Chinese Invasion. Chinese troops in massive surprise attacks defeated Indian frontier forces in Jammu and in the northeastern frontier region, on fronts 1,000 miles apart. The eastern drive, in particular, was spectacularly successful, and all Indian resistance north of the Brahmaputra Valley was overrun.

1962, November 21. Chinese Unilateral Cease-Fire. Having gained all of the border regions they had claimed, the Chinese suddenly declared a unilateral cease-fire and withdrew to lines which would assure their retention of these regions. Nehru rejected the Chinese terms for settling the dispute, but since the defeated Indians had no desire to renew the war, informal truce prevailed along the Himalayan frontiers at the end of the period.

1962–1965. Military Reform. India, receiving considerable military assistance from the U.S. and from other Commonwealth nations, attempted to revitalize her armed forces and remedy the many defects disclosed in the disastrous war with China.

Hostilities with Pakistan, May–September 1965

1965, April–May. Undeclared War in the Rann of Kutch. A frontier dispute with Pakistan, in a desolate region where the frontier had not been clearly defined, broke into full-scale hostilities for approximately 2 weeks. The Pakistanis seem to have had slightly the better of the struggle before monsoon rains ended operations.

1965, August 5–23. Border Clashes in Kashmir and Punjab. Following Pakistan's initiative in Kashmir, military and irregular infiltrators on both sides crossed the Kashmir cease-fire line and the nearby Punjab border in raids and counterraids.

1965, August 24. Indian Raid. Indian troops crossed the cease-fire line in considerable force; fighting raged along the northern frontier. U.N. truce observers in Kashmir brought about a temporary cease-fire.

1965, September 1–25. Major Hostilities. In retaliation for the Indian raid, Pakistan initiated a major invasion across the cease-fire line in Kashmir (September 1). Both sides undertook minor air raids against nearby Punjab cities, as well as against Karachi and New Delhi. Indian troops launched a major attack against Lahore (September 6). The attacks on both sides soon bogged down. In large-scale armored battles, Indian units achieved marginal success over Pakistani tanks. On balance, however, a stalemate resulted.

1965, September 7–8. U.S., U.K., and Australia Halt Arms Shipments to India and Pakistan. The British and Australian announcements followed that of the U.S. by one day.

1965, September 8. Communist China Threatens India. In the face of quiet but determined American and British diplomacy, China failed to carry out threatened actions against Indian border positions in the Himalayas.

1965, September 27. U.N. Cease-Fire Demands Honored. After accepting, then ignoring, an earlier U.N. demand (September 22), both sides agreed to abide by a Security Council cease-fire and began withdrawal to lines held on August 5. A new U.N. India-Pakistan Observation Mission (independent of the U.N. Observer Group in Kashmir) was established (September 25), and 75 observers from 8 nations came to the Punjab to supervise the cease-fire. Cease-fire violations by both sides were reported in the following weeks, but there were no further major hostilities.

1966, January 10. Declaration of Tashkent. India and Pakistan agreed to withdraw their troops from frontier confrontation positions. This pullback was completed on February 25.

1967, September 11–14. Clashes with Chinese on Sikkim-Tibet Frontier. Both India and China accused the other of border violations. However, the clashes were limited to exchanges of rifle and artillery fire, and no substantial movement was made into either Tibet or the Indian protectorate of Sikkim.

1971, August 9. Treaty of Friendship with the U.S.S.R. This 20-year pact greatly strengthened India's hand in the increasingly tense relations with Pakistan resulting from unrest in East Pakistan.

1971, December 3–17. War with Pakistan. **(See p. 1407.)**

1972, March 12. Last Indian Troops Withdraw from Bangladesh.

1972, March 19. Treaty of Friendship with Bangladesh. The provisions were very similar to those in the 1971 India-U.S.S.R. friendship treaty.

1972, July 3. Peace Treaty with Pakistan. **(See p. 1408.)**

1973, April 8. India Assumes Administrative Control of Sikkim. This was in response to a plea from Chogyal (Prince) **Palden Thondup Namgyal** of the protectorate, following two weeks of anti-government violence in Sikkim. This arrangement was ratified in an agreement between India and Sikkim one month later.

Pakistan

The military history of Pakistan during this period has been essentially that of her continuing friction with India. There have also been sporadic border disputes with Afghanistan. Pakistan is a member of the Central Treaty Organization (see p. 1392) and Southeast Asia Treaty Organization (see p. 1410).

1947, August 14. Independence. Viscount Mountbatten turned over the government of Pakistan to **Mohammed Ali Jinnah** in a ceremony in Karachi, as rioting, violence, and death spread through the Punjab and elsewhere along the border regions of India and Pakistan (see p. 1404).

1948, January 8. Unrest and Rioting in Karachi. A result of popular dissatisfaction with the government, the economic and political unrest generally increased during the following 10 years.

1954, May 19. U.S. Military Aid. Agreement between the U.S. and Pakistan for America to provide military supplies and technical assistance. Pakistan agreed to use the aid only for defense and participation in U.N. collective-security arrangements; India, however, proclaimed bitterly that this was giving Pakistan assistance for possible war with India.

1955, September 19. Pakistan Joins Baghdad Pact. **(See p. 0000.)**

1956, March 23. Pakistan Becomes a Republic. It remained in the British Commonwealth.

1958, October 7–27. Bloodless Coup d'État. Acting through President **Iskander Mirza,** General **Ayub Khan** dismissed the government, annulled the constitution, and established a "benign martial law." He immediately began sweeping economic and political reforms, reestablishing stability. Mirza soon resigned (October 27). Ayub Khan was elected president under a new constitution (February 17, 1960).

1959, February 25. U.S. Arms Aid Accepted. President Eisenhower reported that Pakistan would receive arms aid from the U.S. to strengthen the defensive capabilities of the Middle East. India rejected a comparable offer (see p. 1405).

1965, May–September. Hostilities with India. **(See p. 1405.)**

1969, March 25. Ayub Khan Resigns. As a result of increasing violence and unrest throughout the country, he turned over the government to General Agha **Mohommed Yahya Khan,** commander in chief of the Army.

1970, December 7. First General Election. This was to elect a National Assembly, which early in 1971 was to formulate a new constitution for the country. An absolute majority of Assembly seats was won by the Awami League of East Pakistan, headed by Sheikh **Mujibur Rahman.** Sheikh Mujibur and his League had long struggled to gain autonomy for East Pakistan. This was totally unacceptable to the dominant, but less numerous, people and administrators of West Pakistan.

1971, March 24. President Yahya Khan Proclaims Martial Law. In response to violence in East Pakistan after the President postponed the first scheduled session of the National Assembly. Sheikh Mujibur undertook a nonviolent civil disobedience campaign, giving him virtual control of the eastern province. President Yahya Khan flew to Dacca to negotiate with Sheikh Mujibur, but left abruptly after 11 days (March 24). He called the Sheikh a traitor, and outlawed the Awami League.

1971, March 25. Outbreak of Civil War. Initiation of suppressive action by Pakistani forces (almost all from West Pakistan) led Sheikh Mujibur to proclaim the independence of East Pakistan as Bangladesh (March 26). Mujibur was seized early in the struggle, and the well-equipped Pakistani Army brutally suppressed the revolt in about 5 weeks (by May 5). The number of East Pakistani casualties is unknown, but probably exceeded 100,000. During the fighting about 3 million refugees fled from East Pakistan into India, complicating the already serious food problem of that country. During the next month another 3 million Bengali refugees from East Pakistan fled into India. A few of the refugees attempted to harass the East Pakistan frontiers, with little success, until they began to receive covert Indian support (fall, 1971). The result was increasing frontier incidents and intensified Pakistani suppression of unrest in East Pakistan.

1971, June–November. Growing Tension with India. There were frequent instances of artillery fire across the border, and small raids by both sides. India gave considerable assistance to East Pakistan rebels based in eastern India.

1971, November 8. Cancellation of U.S. Arms Shipments to Pakistan. Although described as an action of "mutual consent," this was really the result of increasing American unhappiness about the use of American weapons to suppress the Bengalis of East Pakistan.

Hostilities with India, December 3–16, 1971

1971, December 3. Outbreak of War. The Indian tactic of increasing aid to the Bangladesh rebels, while avoiding an overt Indian-Pakistani confrontation, finally accomplished the result India had obviously been seeking: goading Pakistan into taking the first hostile action. This was a massive air strike by the

Pakistani Air Force against most major Indian air bases, in hopes of achieving the kind of result accomplished by Israel at the outbreak of the 1967 Middle East War (see p. 1343). The Indians, aware that their policy of goading Pakistan to war demanded complete alertness, were ready, and the Pakistani air strikes were generally unsuccessful.

1971, December 3. Indian Invasion of East Pakistan. Fully prepared for the outbreak of hostilities, Indian forces at least triple the strength of the 90,000-man Pakistani garrison of East Pakistan began a major 2-pronged invasion of the province, from the north and the west, with 3 subsidiary attacks from north, west, and east.

1971, December 4. Pakistani Invasion of Indian Kashmir. The Pakistanis made minor gains, some as much as 10 miles, but their advance was soon halted by the alert Indians, who had expected this move.

1971, December 5–6. Soviets Veto U.N. Security Council Cease-Fire Resolutions. In support of their Indian allies, who were advancing rapidly into East Pakistan, the Soviets refused to agree to a cease-fire, which would have halted the advance. Pakistan Foreign Minister **Zulfikar Ali Bhutto** at once took the issue to the slow-moving General Assembly.

1971, December 6. India Recognizes Bangladesh.

1971, December 14–16. Battle for Dacca. This began when Indian ground troops, only 7 miles from the capital, advanced under cover of artillery fire and air attacks against the defenders in the city. The East Pakistani government resigned and took refuge in a neutral zone in the city, established by the Red Cross.

1971, December 15. U.N. General Assembly Demands Cease-Fire in East Pakistan. By this time most Pakistani resistance had collapsed in East Pakistan. Having piously called for a cease-fire, and having no enforcement authority, the General Assembly prepared to turn to other business. Foreign Minister Bhutto, denouncing the United Nations' "miserable, shameful" failure to take positive action, walked out of the building and flew home.

1971, December 15. Indian Attacks in the West. In intensified fighting the Indians recovered some captured territory on the Indian-Pakistan border in Kashmir and the Punjab and advanced into Pakistan at some points in Hyderabad and the Punjab.

1971, December 16. Pakistani Surrender in Dacca. Lieutenant General **A. A. K. Niazi** surrendered to General **S. H. F. J. Manekshaw,** Indian Army Chief of Staff. This virtually ended the war.

1971, December 17. Cease-Fire Accepted by Both Sides. Indian losses were approximately 2,400 killed, 6,200 wounded, and 2,100 captured; India lost 73 tanks and 45 aircraft. Pakistani losses were more than 4,000 dead and 10,000 wounded; most of the wounded were included among 93,000 prisoners of war.

1971, December 20. Yahya Khan Resigns; Bhutto Becomes President. As his first official act Bhutto dismissed the senior military leaders and put them and the former president under arrest.

1972, July 3. Interim Peace Settlement. President Bhutto and Prime Minister **Indira Gandhi** of India, after a 5-day meeting at Simla, India, agreed to a troop withdrawal along most of their joint frontier, but postponed action on the more difficult problems of the Kashmir frontier and the return of 93,000 Pakistani prisoners of war held by India.

1972, December 7. Agreement on Kashmir Truce Line. Both sides began to withdraw their troops.

1973, August 8. India Agrees to Release Pakistani Prisoners of War. Return was completed in April 1974.

Afghanistan

1949–1965. Strained Relations with Pakistan. Pakistani refusal to honor Afghan claims for frontier revision resulted in tension and occasional border clashes.

1956, August–October. Soviet Military Aid. The U.S.S.R. provided guns, ammunition, and airplanes.

1973, July 17. Coup d'État. During the absence of King **Mohammed Zahir Shah,** his brother-in-law and Army commander, Lieutenant General **Mohammed Daoud Khan,** seized power and declared the country a republic with himself as president and premier.

(Ceylon) Sri Lanka

1948, February 4. Independence of Ceylon. It became an independent dominion within the British Commonwealth.

1953, August 12–19. Communist Terrorism. The government suppressed the disorders after receiving emergency powers from Parliament.

1956–1961, Sporadic "Language Riots." These stemmed from the desire of the minority Tamils to have their language accepted as an alternative to Sinhalese. These bloody riots intensified in 1958 (February–July) but were ended when limited official status was granted Tamil (August 5 1961).

1962, January 29. Attempted Coup.

1971, April 5–June 9. Rebellion of the People's Liberation Front. The PLF, impatient with the slow social progress of the leftist government of Prime Minister Mrs. **Sirimavo Bandaranaike,** attempted to seize control of Colombo and other cities. A plot to assassinate the Prime Minister failed. The revolt was soon suppressed in the cities (April 13), but fierce fighting continued in rural and jungle areas. The U.S.S.R. provided Ceylon with fighter aircraft and pilot training personnel, to help the government reestablish control. Both India and Pakistan provided helicopters and crews. Britain shipped weapons and ammunition. The rebellion was officially declared to be suppressed, and the nation's schools were reopened, 2 months after the outbreak of civil war (June 9).

1972, May 22. Ceylon Becomes Republic of Sri Lanka.

Bangladesh

1971, March 26. Independence of Bangladesh Proclaimed. Following disputes with West Pakistan, and resentful of West Pakistan's domination, Sheikh Mujibur Rahman, political leader of East Pakistan, declared the independence of the province as Bangladesh. This resulted in prompt action by the government of Pakistan to reestablish firm control (see p. 1407).

1971, March–December. War for Independence. This was largely unsuccessful until intervention by India (see p. 1407).

1971, December 17. Independence Effective. This was the result of India's victory over Pakistan (see p. 1408).

Nepal

1950, November 11–20. Insurrection. King Tribhubarra Bir Bikram, deposed by the government of Premier **Mohan Shumshere** (November 7), was supported by an uprising of the reform-minded Congress party. Loyal Gurkha troops defeated the rebels. The king was later invited back to resume his reign.

1952, January 24. Unsuccessful Revolt. The Communist party was outlawed.

1952, August 13. King Tribhubarra Takes Control. This was in an effort to end the unrest which had been plaguing the country. He restored parliamentary rule in 1953 (April 13).

1960, June 28. Border Incident with China. China apologized for "carelessness" in attacking Nepalese troops, but said they were on Tibetan territory.

1960, December 15. Royal Coup. King **Mahendra Bir Bikram** seized power, with army support, ousting the regime of Premier **B. P. Kirala.**

1961, March–December. Civil War. The revolt was suppressed.

SOUTHEAST ASIA

The area became the eastern battleground for the warring ideologies—communism vs. the Free World. The Communists, checked at least temporarily by the armistice in Korea, shifted their efforts to support existing, indigenous struggles already under way in Indochina, Malaya, and Indonesia. After the collapse of French colonial rule in Indochina (1954; see below), the U.S. took the lead in sponsoring an anti-Communist regional organization to prevent further Communist gains in the area.

Southeast Asia Treaty Organization (SEATO)

This treaty was established as part of the American effort to create a group of mutual-security pacts around the world after the 1954 Geneva Conference (see p. 1414). The 8 members were Australia, France, New Zealand, Pakistan, the Philippines, Thailand, the United Kingdom, and the United States. The treaty was set up for the purpose of providing for collective defense and economic cooperation in Southeast Asia, and to protect the weak nations of the region against aggression. Theoretically patterned after NATO, SEATO has been relatively helpless and ineffective, due to 3 major factors: lack of widespread support among Southeast Asian nations fearful of angering Communist China; skillful Communist subversion, diplomacy, and "agitprop"; and French foot-dragging.

1954, September 8. Manila Treaty. The defense treaty for Southeast Asia was signed in Manila by representatives of the participating governments. This followed diplomatic initiatives by the ANZUS nations (Australia, New Zealand, and the U.S., beginning June 30).

1955, February 19. Southeast Asia Defense Treaty into Effect.

1964, April 15. SEATO Supports South Vietnam. The Ministerial Council of SEATO, meeting in Manila, issued a declaration of support of South Vietnam military efforts against the Viet Cong guerrillas. France abstained.

Burma

Independence sentiment among the people, combined with results of Burmese independence activities during the war, directed against both the British and the Japanese (see pp. 1240, 1297), led to British agreement to grant independence to Burma.

1945–1946. Guerrilla Warfare. British troops were forced to wage a sporadic guerrilla warfare against armed dissidents, most of whom were bandits, throughout Burma.

1947, January 28. Britain Announces Plans for Burma's Independence.

1947, July 19. Assassination of General Aung San. The premier of Burma, the nation's war hero, and 5 members of his cabinet were assassinated by intruders during a cabinet meeting in Rangoon. The assassins were apprehended, tried, and executed (December 30).

1948, January 4. Independence of the Union of Burma. Burma, under Prime Minister **U Nu,** refused to join the British Commonwealth.

1948, March. Outbreak of Communist Revolt. This began in south-central Burma, mainly in the Irrawaddy Delta.

1948, August. Outbreak of Karen Revolt. The objective was to achieve an autonomous Karen state. At first successful, the Karens, in somewhat reluctant cooperation with the Communists, gained control of much of south-central Burma. They proclaimed their independence (June 14, 1949), with capital at Toungoo.

1949, January–February. Karen Rebels at Outskirts of Rangoon. They cut the Rangoon-Mandalay railroad and were within artillery range of parts of the area within Rangoon city limits.

1949–1950. Government Counteroffensive.

1950, March 19. Government Forces Capture Toungoo. The Karen revolt began to collapse. The Burmese government reestablished control over most of central Burma.

1950, May 19. Government Forces Capture Prome. This was the main Communist center of south-central Burma.

1950–1974. Continuous Guerrilla Warfare in Burma. After barely surviving collaboration between nationalistic and communistic rebels (1948–1949), loyal Burmese forces under General **Ne Win,** in methodical guerrilla warfare, reestablished law and order in most parts of the country (1954). Endemic rebellion and guerrilla warfare continued throughout many of the outlying provinces, however.

1953, April 23. U.N. Calls for Withdrawal of Chinese Nationalists. These were Chinese Nationalist refugee troops who were defying Burmese government authority in the northeastern portions of Burma, where they had withdrawn after the defeat of the National Government in China. Burma had complained to the U.N. (1950). The refugees refused to withdraw and the National Government of China refused to recognize them. However, after considerable U.S. pressure, some 2,000 of these Chinese Nationalist guerrillas were evacuated from Burma to Formosa (November). Early next year, 6,400 guerrillas and dependents were evacuated to Formosa (May). It was estimated, however, that at least 6,000 remained in the jungle region.

1956, July 31. Border Dispute with Communist China. Chinese troops seized 1,000 square miles of territory in northeast Burma.

1958, September 26. Military Coup. Deterioration of government control and a threatened Communist coup led General Ne Win to seize control of the government. He restored civil rule after national elections (February 6, 1960), after signing a nonaggression treaty with Communist China (January 28).

1962, March 2. Second Military Coup. Deterioration of civilian government again led Ne Win to establish a military dictatorship.

Thailand

Despite considerable political turbulence, leading to several coups d'état and the murder of a king, Thailand as a nation has remained relatively stable, more so than any other in the region. It has been steadfastly anti-Communist, and is a member of SEATO (see p. 1410). As the period ended, Thailand was giving substantial assistance, including base rights, to the U.S. effort in Vietnam.

1946, May 26–30. Franco-Thai Frontier Dispute. After clashes along the Mekong River, Thailand appealed to the U.N. Security Council to halt French aggression, but France insisted that the so-called military activity was simply pursuit by Chinese troops of bandits from the Siamese side of the river that had been raiding east of the river.

1946, June 9. King Ananda Dies Under Suspicious Circumstances. He was succeeded by his brother, **Phumiphon.**

1947, November 9. Military Coup d'État.

Field Marshal **Luang Pibul Songgram** seized control of the government in Bangkok. Prime Minister **Pridi Phanomyong** fled the country.

1949, February 26–27. Insurrection. During a state of emergency caused by Communist activity along the Malayan border, units of the Thai Army and Navy accused each other of plotting a coup against the government of Premier **Pibul Songgram,** and extensive fighting took place in and around Bangkok.

1951, June 29–July 1. Naval Revolt Suppressed.

1951, November 29. Military Uprising Suppressed. In the confusion, however, a political coup forced Pibul to amend the constitution.

1957, September 17. Bloodless Coup d'Etat. Field Marshal **Sarit Thanarat** seized control; Field Marshal Pibul fled to Cambodia. Sarit later retired, establishing a caretaker government (April 1958).

1958, October 20. Sarit Seizes Control Again. He retained power and became prime minister (January 1959).

1958, November–December. Border Clashes with Cambodia.

1964–1970. Repeated Border Incidents with Cambodia. Thailand wanted to recover eastern frontier territory long disputed with France (see above, 1946, May 26–30).

1964–1974. Sporadic Communist Terrorism. This violence was confined to the extreme northern and southern areas of the country.

1967, March 22. U.S. B-52 Bomber Bases Permitted in Thailand. This enabled the U.S. to shift some heavy bombers from Guam to Thai bases much closer to targets in Vietnam.

1967, September. Thai Troops Committed to Combat in Vietnam. Their participation was financed by the U.S., under the terms of an executive agreement between Thailand and the U.S. (1965).

1967, December 1. Martial Law Declared in Five Provinces. This was the result of increased Communist guerrilla activity, and brought to 12 the number of provinces under martial law in the extreme north and south of the country.

1969, July 7. Secret Military Agreement with U.S. Revealed. U.S. Senator **J. W. Fullbright** revealed the agreement, which permitted stationing 47,000 U.S. military men in Thailand.

1970, February 2. Withdrawal of 4,200 American Military Personnel Announced. This left 43,800 American troops in Thailand.

1971, November 17. Government Coup. Prime Minister, General **Thanom Kittikachorn,** ended constitutional rule, seized full power, and declared martial law.

1972, February 4. Thai Troops Withdrawn from Vietnam.

1973, October 14. Resignation of Prime Minister Kittikachorn. This was the culmination of increasing unrest and popular dissatisfaction with the military dictatorship, which had erupted a few days earlier in bloody violence. King **Phumiphol Adulet** appointed **Sanya Dhamasakti,** Dean of Thammasat University (center of student protests against Kittikachorn) as Prime Minister.

INDOCHINA, 1945–1954

By the close of World War II, the guerrilla forces of Vietnamese nationalists and Communists, combined in an organization known as the Viet Minh, under the overall political leadership of Communist **Ho Chi Minh** and the military leadership of initially nationalist guerrilla leader Vo Nguyen Giap, had gained control of much of the jungle region of north Vietnam. This success had been achieved with the largely unwitting assistance of the Chinese National Government and of the U.S., both happy to receive assistance from the Vietnamese against Japan, and both willing to see France eliminated from Indochina, but neither fully realizing the international Communist ties of Ho. The Viet Minh declared their independence when Japan collapsed at the

close of the war but the French, through their own efforts, and with some British assistance, moved immediately to reestablish their colonial rule over the area. The resultant conflict touched off the most prolonged warfare of the entire period since World War II.

1945, September 2. Vietnam Republic Proclaimed by Ho Chi Minh.

1946, March 6. France Recognizes Independence of Vietnam Republic. This was only as a free state within the Indochinese Federation and the French Union. Meanwhile, French military strength built up rapidly. French-imposed limitations on independence proving unacceptable to the Viet Minh, guerrilla warfare broke out, mostly in northern Vietnam, later in the year (December).

1947, January–February. Siege of Huế. After a siege of several weeks, French troops relieved the besieged garrison of Huế, driving off the Viet Minh guerrillas surrounding the ancient capital of the country.

1950, January. Viet Minh Recognized by Communist China and the U.S.S.R. Increasing military assistance was given to the Viet Minh guerrillas by China. Viet Minh troops received intensive training in southern China. American military aid to French Vietnam increased with the intensity of guerrilla warfare.

1950, October. French Setbacks. Well-trained, well-equipped Viet Minh troops, operating partly from China and partly from the jungled highlands of northern Vietnam, mounted a major assault against the French cordon of defenses in northern Tonkin, covering the Chinese border. French troops were badly defeated at **Fort Caobang,** near Langson (October 9). This, combined with increased activity by the Communist Pathet Lao insurgents in Laos (see p. 1417), forced the French to abandon most of northern Vietnam (October 21) and to establish a fortified perimeter around the Red River Delta in the north (December). The situation in southern and central Vietnam was not much better, with much of the Mekong Delta in Communist hands.

1950, December. De Lattre de Tassigny to Command. France sent her leading soldier to try to restore the situation. He soon reestablished French morale, regained the initiative, and reoccupied most of the areas lost in late 1950.

1950, December 23. Vietnam Sovereign within French Union. A treaty was signed at Saigon.

1951–1953. Continued Guerrilla Warfare. This was combined with anti-French terrorism in the major cities. Despite De Lattre's military successes, French control could be asserted only where major French forces were stationed.

1952, September. De Lattre Relieved. Seriously ill, he returned to France via the U.S., where he pleaded for more aid. He died a few months later.

1953, January–February. Intensified French Operations. In the biggest naval operation of the war, French troops (now under General **Raoul Salan**) seized **Quinhon,** a rebel base, and destroyed several Viet Minh war factories concealed in the jungles of south Vietnam.

1953, March–September. Increased U.S. Aid to France for the Indochina War.

1953, May 8. Navarre Relieves Salan. Pedestrian General Salan was relieved by pedestrian General **Henri-Eugène Navarre.**

1953, July 6. Increased Independence for Vietnam and Laos. They accepted a French offer to negotiate for greater self-government in the Associated States of Indochina. Cambodia refused.

1953, August–October. Negotiations between France and Cambodia. France gave the government of King **Norodom Sihanouk** almost complete military, political, and economic sovereignty, although France retained operational control of some military forces in eastern Cambodia for purposes of prosecuting the war against the Viet Minh.

1953, October–1954, April. Intensified Viet Minh Operations. French premier **Joseph Laniel** said his government would accept "any honorable" solution to the war in Indochina,

and was not trying to force the Viet Minh to unconditional surrender (November 12).

1953, November 20–1954, May 7. Siege of Dienbienphu. General Navarre, hoping to decoy the Communists into 1 large pocket and then crush them, permitted Brigadier General **Christian de la Croix de Castries,** with some 15,000 men—French regulars, Foreign Legion, and indigenous troops—to fortify and hold the village and an airstrip, situated 220 miles west of Hanoi and near the Laotian border. General Giap, with 4 divisions of Chinese-trained Viet Minh troops, surrounded Dienbienphu with 2 divisions while the remainder of his force sealed it off and swept into Laos. Against the French artillery—24 105-mm. And 4 155-mm. howitzers—Giap assembled the overwhelming firepower of over 200 guns, including antiaircraft artillery and rocket launchers. A trickle of supply by air from Hanoi, little enough when the defenders still held the air field, ceased with its capture (March 27). Attempts at air drop failed; the Viet Minh antiaircraft artillery was too good. Of 420 French aircraft available for this purpose, 62 were shot down and 107 others damaged. One by one the outlying strong points of the Dienbienphu defense complex fell to a combination of mining, well-directed artillery fire, and direct assault. A final assault overran the starving defenders as their last ammunition was expended (May 7). Only 73 of the 15,094-man garrison escaped. Some 10,000—half of them wounded—were captured; the remainder were dead. Viet Minh losses were estimated at 25,000.

COMMENT. *The fall of Dienbienphu virtually ended French control over Indochina. At the same time, it proved the fallacy of cordon defense in jungle warfare, particularly when the opponents are well trained, armed, and supplied. French military thought in this instance was still clinging to methods used against guerrillas in North Africa and, in 1882–1885, in this very area. (See p. 943, the French garrison of Tuyen-Quang successfully resisted besiegement by "Black Flag" indigenous guerrillas from November 23, 1884, to February 28, 1885. But the "Black Flags," while fanatically brave, had neither discipline nor resources, and were unable to hold up the French relief column advancing from Hanoi, only 50 miles away.)*

1954, April 26–July 21. Geneva Conference. The Conference on Far Eastern Affairs of 19 nations (including Communist China) resulted in an agreement for a cease-fire and divided Tonkin and Annam into North (Communist) and South (anti-Communist) Vietnam as independent nations divided at the 17th parallel of North Latitude. Cambodia, which had proclaimed its independence of France (November 9, 1953), and Laos, its independence proclaimed (July 19, 1949), were both recognized as neutral independent states. The United States accepted the agreements, but refused to sign them, and reserved the right to take whatever action was necessary in the event that the agreements were breached. France withdrew her troops from Indochina, but continued military direction and instruction in South Vietnam, Laos, and Cambodia, while the U.S. assumed the chore of providing military equipment and instruction as well as economic aid.

1954, December 29. Independence of Indochina. Vietnam, Laos, and Cambodia signed agreements with France, giving them economic independence and virtually ending foreign control. The states granted each other freedom of navigation on the Mekong River.

VIETNAM

1954, July 7. Ngo Dinh Diem Appointed Premier.

1954, October 11. Communist Viet Minh Takes Control of North Vietnam.

1955, January 20. U.S. Military Aid. The U.S., France, and South Vietnam agreed to reorganize the Vietnamese Army with 100,000 active troops and 150,000 reserves. The U.S. was to send a training mission to operate under the direction of General **Paul Ely,** new French commander in Indochina.

1955, October 26. Republic Proclaimed. Diem was inaugurated president.

1956–1964. Continuous Insurrection. This was sponsored by the Communist bloc, despite

efforts of the government to control rebellious factions (Viet Cong) supported by troops and equipment from North Vietnam in turn aided and supported by Communist China. U.S. efforts to strengthen the South Vietnamese military force consistently increased, without retrieving the situation.

1956, April 28. U.S. Military Assistance Advisory Group (MAAG) Assumes Responsibility for Training.

1960, November 11. Military Revolt against Diem. This was suppressed.

1961, October 11. U.S. Assistance Pledged. The U.S. agreed to support the government of South Vietnam against attacks by Communist Viet Cong guerrillas. General **Maxwell D. Taylor** was sent to Vietnam by President **John F. Kennedy** to determine the most effective means of help. President Kennedy sent a personal message to President Diem with a pledge to continue assistance (October 26).

1961, December 11. First U.S. Support Units Arrive. Two U.S. Army helicopter companies, the first direct military support for South Vietnam, arrived in Saigon aboard a U.S. aircraft carrier.

1962, February 8. U.S. Military Assistance Command Established. The purpose was to demonstrate U.S. determination to prevent a Communist takeover.

1962, March 22. Operation "Sunrise" Begins. This was designed to eliminate the Viet Cong. Operations began in Binh Duong Province.

1963, November 1–2. Military Coup d'Ėtat. The government of President Diem was overthrown; he and his brother were killed. A provisional government was established under former Vice-President **Nguyen Ngoc Tho,** and was recognized by the U.S. Actual control was under a military junta led by Major General **Duong Van Minh.**

1964, January 30. Military Coup d'Ėtat. The government was overthrown by Major General **Nguyen Khanh.**

1964, February 4–6. Viet Cong Launches Offensive in Tay Ninh Province and Mekong Delta.

1964, August 2–4. Action in the Gulf of Tonkin. Three North Vietnamese PT boats attacked a U.S. destroyer. The PT boats were repelled and damaged or sunk by the destroyer and U.S. planes. A similar incident occurred 2 days later (August 4).

1964, August 5. U.S. Air Strikes against North Vietnam. American carrier-based strikes against naval bases were ordered by President Johnson in retaliation for the PT-boat attacks.

1964, August 7. Gulf of Tonkin Resolution. Congress approved a resolution giving President **Lyndon B. Johnson** authority to take "all necessary measures to repel any armed attack" against U.S. armed forces. It also authorized him to take "all necessary steps, including the use of armed forces," to help any nation requesting aid "in defense of its freedom" under the Southeast Asia Collective Defense Treaty.

1964, August–September. Political Turmoil. The government of General Khanh survived riots and demonstrations, but only by promising to give early control to a civilian government and suppressing an attempted military revolt (September 13).

1964, November 1. Communist Guerrilla Attack on U.S. Support Base at Bien Hoa. Four Americans and 2 Vietnamese were killed; 12 Americans and 5 Vietnamese wounded. Several American and Vietnamese aircraft and helicopters were destroyed or damaged.

1964, November 4. Civilian Regime Installed. General Khanh resigned as **Tran Van Huong** became premier.

1964, December 19. Military Uprising. A Military Council retained Premier Huong in nominal control.

1965, January 27. Khanh Returns to Power. The Armed Forces Council deposed Premier Huong and returned General Nguyen Khanh to the head of the government.

1965–1973. The United States War in Vietnam. **(See p. 1321.)**

1965, February 21. Khanh Deposed. After a complicated series of moves, in which civilian **Phan Huy Quat** was installed as premier,

with Khanh retaining behind-the-scenes control, the Armed Forces Council voted to oust Khanh as council chairman and armed forces commander. Quat remained premier.

1965, June 12–19. Bloodless Government Upheaval. Premier Quat resigned as a result of religious turmoil involving Buddhists and Catholics. The military took over and elected Air Vice-Marshal **Nguyen Cao Ky** (age 36) as premier. This was the eighth government since the overthrow of Diem (November 1963).

1967, September 3. Nguyen Van Theiu Elected President. He was inaugurated the first president of South Vietnam's Second Republic (October 31).

1973, January 23. Cease-Fire Agreement. **(See p. 1333.)**

1973, March 29. Departure of Last American Troops from Vietnam. **(See p. 1333.)**

1973, April 7. International Peace-Keeping Helicopter Shot Down by Communists. Attempting to investigate one of the increasingly numerous and serious cease-fire violations throughout South Vietnam, an international peacekeeping force team was shot down by a Communist missile in northern Quang Tri Province. All 9 aboard were killed.

1973, June 13. New Cease-Fire Agreement. Representatives of the U.S., North Vietnam, South Vietnam, and the Viet Cong signed a 14-point agreement calling for an end to all cease-fire violations. Among its provisions: U.S. reconnaissance flights over North Vietnam would end; U.S. minesweeping operations would be resumed in North Vietnamese waters; commanders of opposing troops in contact would meet to prevent further outbreaks of hostilities and to assure adequate medical supplies and care. For a while there was some reduction in the intensity of fighting, but the local ground commanders failed to meet, and fighting continued.

1973–1975. Widespread Combat. Fighting continued in many areas despite the cease-fire.

1975, January 1–7. Communists Capture Phuoc Binh. The capital of Phuoc Long fell after a 7-day siege.

1975, January 17. ARVN Counteroffensive in the Mekong Delta. About 2,000 troops attacked along the Cambodian border.

1975, February 24–March 2. Visit of U.S. Congressional Delegation. Eighty-one members went to Indochina to review the situation as a basis for action on request for additional aid.

1975, March 5. Communists Launch Offensive in the Central Highlands. Major fighting by strong North Vietnamese forces resulted in the capture of many towns, cutting of highways, and isolating of garrisons in the Communist advance, and the fall of **Ban Me Thuot** after a fierce battle (March 5–13). In Quang Tri and Thua Thien provinces North Vietnamese forces also made important gains.

1975, March 18–20. ARVN Collapse in the North and West. Government troops withdrew in the face of a growing North Vietnamese offensive. President **Nguyen Van Thieu** announced (March 20) the government's intention to evacuate 2 provinces in the northwest and 9 in the central highlands.

1975, March 25. Hue Falls. The former imperial capital was abandoned, giving the Communists control of Thua Thien Province.

1975, April 1. Danang Falls. Despite plans to hold the city, second-largest in South Vietnam, ARVN troops offered little resistance. The third-largest city, Qui Nhon, was similarly abandoned the following day (April 2).

1975, April 9–22. Battle of Kuon Loc. After fierce fighting in which both sides took heavy casualties and the town changed hands several itmes, it was finally abandoned by the ARVN.

1975, April 21. Thieu Resigns as President. Vice President Tran Van Huong was appointed to replace him.

1975, April 27. Huong Resigns as President. Unacceptable to the Communists for negotiations, he resigned in favor of Lieutenant General **Duong Van Minh.**

1975, April 30. South Vietnam Surrenders to the Communists.

Laos

Its independence proclaimed (July 19, 1949), and recognized as a neutral nation by the Geneva Conference (see p. 1414), Laos nevertheless became the center of a maelstrom of Communist-inspired outbreaks by the indigenous Pathet Lao, supported by both the U.S.S.R. and Communist China. U.S. support of the Royal Laotian Army (July 9, 1955) was temporarily suspended (October 1960) as the country seethed in a 3-cornered conflict—rightist forces under General **Phoumi Nosavan,** neutralist troops under Premier Prince **Souvanna Phouma,** and the Communist Pathet Lao under Souvanna's half-brother, Prince **Souphanouvong.**

The Plaine des Jarres area in north-central Laos was the arena for most of the fighting, an endless series of inconclusive clashes. Stepped-up assaults by the Pathet Lao brought a concentration of 5,000 U.S. troops into Thailand (May 19, 1962) to protect that nation's border. This force was withdrawn (July 30), its mission accomplished. U.S. military advisers to the Laotian Army were withdrawn by October 7. During 1962, Laotian territory became a convenient communications channel for North Vietnamese troops infiltrating South Vietnam in support of the Viet Cong. On May 17, 1964, the U.S. instituted a continuous aerial reconnaissance sweep of Laos by jet planes. The principal events were:

1953, April 14. Viet Minh Invades Laos. They seized a base abandoned by the French at Samneua. Joining with rebel Laotians, the Viet Minh advanced toward the capital of Luang Prabang, capturing **Xiengkhouang** (April 20). Laos mobilized military forces, and the U.S. rushed military aid. Vietnamese forces began to retreat (early May). French forces retook Xiengkhouang.

1953, October 22. Independence of Laos. France and Laos signed a treaty giving the state full independence and sovereignty within the French Union.

1953–1954. Anti-French Insurgency. This was accompanied by complicated maneuvering by Communist and anti-Communist factions.

1954, July 21. Geneva Accord. (See p. 1414.)

1959, July 30–31. Communist-Led Guerrillas Attack Laotian Army Posts. Communist-led Pathet Lao guerrillas, armed by North Vietnam, attacked Laotian Army posts throughout northern Laos.

1959, September 7. U.N. Investigation. The Security Council voted to inquire into the Laos government's charges of aggression by North Vietnam.

1960, August 9. Coup d'État. The government of Premier **Tiao Samsonith** was overthrown by a military rebellion led by Captain **Kong Le,** a parachute battalion commander. Under Kong Le's sponsorship, neutralist leader Prince **Souvanna Phouma** became premier. Kong Le, soon to become a general, was to play an important, ambiguous, neutralist, but anti-Communist role in subsequent years of the complex civil war.

1961, March 23. U.S. Warnings. President Kennedy announced that the U.S. would not stand idly by and permit Laos to be taken over by advancing externally supported pro-Communist rebel forces. A previous warning had been made without effect by the Eisenhower administration (December 31).

1961, April 3. Cease-Fire between Government and the Pathet Lao.

1962, May 12. U.S. Troop Deployments. As a result of Pathet Lao violation of the 1961 cease-fire agreement and the overrunning of most of northern Laos, President Kennedy ordered a task force of the U.S. Seventh Fleet to move toward the Indochina peninsula. He then ordered 4,000 more U.S. troops to Thailand (where some 1,000 U.S. troops were already stationed, May 15).

1962, July 23. Geneva Agreement on Laos. Fourteen nations guaranteed the neutrality and independence of Laos.

1962, October 5. Withdrawal of U.S. Military Advisers. This was in compliance with the Geneva Agreement. There were approximately 800 U.S. advisers and technicians withdrawn.

1963, April. Renewed Conflict. Major fighting between neutral and Pathet Lao forces stopped after 3 weeks by a cease-fire agreement. Small-scale warfare continued.

1964, May 16–24. Communist Pathet Lao Forces Seize the Plain of Jars. Kong Le's forces were defeated.

1964–1973. Constant Warfare in Laos. The Pathet Lao, supported by strong North Vietnamese forces, ranging in size from 10,000 to 40,000 troops, held the eastern, southern, and northern portions of the country and posed intermittent threats to the government of Prime Minister Souvanna Phouma in Vientiane.

1964, April 19. Coup d'Etat. Prime Minister Souvanna Phouma was ousted by a right-wing military committee, led by Brigadier General **Kouprasith Abhay,** which seized control of Vientiane. However, after a typical Laotian political ballet, Souvanna Phouma was restored to power, after agreeing to accept the rightist demands for modification of government policy in a merger of rightist and neutralist factions (May 2). This development was denounced by the Pathet Lao.

1965, January 31–February 4. Unsuccessful Army Revolt. Loyal troops cleared rebels from Vientiane, after much fighting. The leader, General **Phoumi Nosavan,** Deputy Prime Minister, fled to Thailand.

1965, March 28–30. Unsuccessful Army Revolt. This was suppressed without bloodshed.

1965, April 16–30. Army Mutiny. Supporters of exiled Deputy Prime Minister Phoumi Nosavan again attempted a revolt, but were crushed.

1969, April–May. Laotian Troops Recapture Plain of Jars from Communists. The offensive was greatly aided by U.S. close air support. Communist troops still held part of the rim of the plain and were unhindered when they initiated simultaneous operations in southern and central Laos.

1970, February 2. Communists Complete Recapture of Plain of Jars. The region was secured by Pathet Lao troops, supported by North Vietnamese, in an 11-day operation.

1970, April 29–30. North Vietnamese Troops Capture Attopeu.

1972, February 7–March 6. Plain of Jars Battle. Offensive by 4,000 Laotian troops with U.S. air support made some gains. These were all lost to a Communist counteroffensive (February 22).

1973, February 21. Cease-Fire in Laos. The agreement provided for: immediate cessation of hostilities by all Laotian and foreign forces; a new provisional coalition government within 30 days; removal of all foreign troops within 60 days after formation of a government; repatriation of all prisoners within 60 days; supervision by the International Control Commission until a new system could be worked out by the Laotians. The cease-fire was not very effective at first, and at the request of the Vientiane government U.S. B-52 bombers on 2 occasions in the next few days hit Communist positions.

1973, September 14, Renewed Cease-Fire Agreement. This was the most effective cease-fire in Laos in more than 20 years, although sporadic outbreaks of violence continued.

1975, April. Combat Intensity Rises. Pathet Lao forces in Laos began an offensive following major Communist victories in Cambodia and South Vietnam.

Cambodia

After its recognition by the Geneva Conference (see p. 1414) as a "neutral" state, Cambodia was in continual friction with her neighbors and with the U.S. as the country veered ever more strongly toward the Communist bloc under its head of state (and ex-king) Prince Norodom

Sihanouk. Sihanouk accepted military aid from the Communist bloc, while placing restrictive conditions upon the reception of U.S. aid. Early (February 18, 1956) he renounced the protection of SEATO. Border clashes with South Vietnam were frequent; free movement through Cambodia of Viet Cong guerrillas was apparently permitted or condoned. Relations with Thailand were equally bad throughout the period.

1950–1954. Widespread Anti-French Insurgency.

1953, June 14. King Norodom Sihanouk into Voluntary Exile. He went to Thailand to promote his fight for complete independence from the French Union.

1963, November 12. Cambodia Refuses U.S. Assistance.

1963, December 12. Cambodia Withdraws Embassy from Washington.

1964–1970. Repeated Border Incidents with Thailand. (See p. 1412.)

1965–1970. Peripheral Involvement in Vietnamese War. Despite the reiterated denials of Chief of State Prince Norodom Sihanouk, practically constant use was made of Cambodian territory by the North Vietnamese, sending reinforcements and supplies to southern South Vietnam via the Ho Chi Minh Trail, and reinforcements by sea through Sihanoukville. The North Vietnamese and the Viet Cong established sanctuary regions and supply depots just inside the Cambodian frontier with South Vietnam. Sihanouk repeatedly denounced U.S. and South Vietnamese pursuit of Communists across the frontier, and occasional U.S. bombings of the sanctuary areas and supply routes.

1969–1970. Guerrilla Warfare against Communist Insurgents. There was increasing violent opposition to the government by Cambodian Communist party **(Khmer Rouge)** guerrillas throughout the country. Collaboration of these antigovernment forces with North Vietnamese and Viet Cong forces was a source of embarrassment as well as a threat to Sihanouk.

1970, March 15. Prime Minister Lon Nol Demands Withdrawal of Communist Forces. In the absence of Prince Sihanouk, the Prime Minister, General **Lon Nol,** responded to anti-Communist demonstrations (which he may have engineered) throughout Cambodia by demanding the immediate withdrawal of North Vietnamese and Viet Cong forces from Cambodian territory. Both refused.

1970, April 30. U.S. Forces Enter Cambodia. (See p. 1330.)

1970, November 1. End of Cambodian Monarchy. Following unanimous legislative action on October 9, Cambodia became the Khmer Republic, ending the 2,000-year-old monarchy.

1972, March 10. Lon Nol Assumes Full Power as Head of State. Sihanouk, who was abroad, went to Peking.

1972, March 21. Communist Bombardment of Phnom Penh. More than 200 rocket and artillery projectiles hit the capital, in the heaviest assault to date.

1972, December. Rocket and Artillery Attacks on Phnom Penh Begin. Shelling by Khmer Rouge forces occurred sporadically, with many civilian casualties, until the end of the war.

1973, March–April. Phnom Penh under Virtual Siege. With all roads to the capital blocked by Communist forces, and the Mekong River supply route also cut by strong forces deployed along the river banks, the capital was in danger of starvation and of running out of necessary military supplies for its hard-pressed garrison. However, strongly protected convoys broke the river blockade (April 8–9), and after the main supply route to the port of Kampong was opened, a large truck convoy reached the city (April 11).

1973, March 17. Lon Nol Declares a State of Emergency. This followed the bombing of the Presidential Palace by a single Cambodian Air Force plane.

1973, August 14. Final U.S. Air Bombardments in Cambodia. (See p. 1333.)

1975, January 1. Rebels Launch Major Drive. In a concerted attack on three fronts around **Phnom Penh,** rebel troops, joined by North Vietnamese and Viet Cong, came within 2 miles of the city's defense line (January 2). All land routes were soon cut. U.S. government-contracted airlift was increased to 10 planes a day.

1975, January 1. Siege of Neak Luong Begins. On the Mekong River, the town commanded the river approach to Phnom Penh.

1975, January 17. Two Convoys Fail to Reach Neak Luong. Both lost ships with ammunition to rebel artillery.

1975, January 23. Ship Convoy Reaches Phnom Penh. Passing through heavy rebel fire, 23 ships arrived from South Vietnam.

1975, February. U.S. Increases Airlift. Flights with arms and ammunition for Phnom Penh were increased to 22–24 a day on February 12 and again 3 days later. Deliveries of food by air were begun on February 27.

1975, February 25. President Ford Requests $222 Million Supplemental Aid. Reportedly less than a month's supply of ammunition remained.

1975, February 28–March 12. Shelling of Phnom Penh's Airport. Intermittent shelling disrupted the airlift, as rebel forces approached within 5 miles of the center of the city.

1975, February 29. U.S. Congressional Delegation Visits Cambodia.

1975, March 11. Military Command Changes. Lieutenant General **Sosthene Fernandez** was removed as commander of the armed forces. Lieutenant General **Saksut Sakhan** replaced him as chief of staff.

1975, April 1. Lon Nol Leaves Cambodia. A collective leadership replaced him.

1975, April 1. Insurgents Capture Neak Luong. The 3-month siege had left the naval base in total ruin. With rebel forces closing in on Phnom Penh and the airport under repeated fire, air traffic was suspended temporarily several times.

1975, April 16. Khmer Rouge Victorious. The government of President Lon Nol (who fled on April 1) surrendered to the Communists, who occupied Phnom Penh.

Malaysia

1948, February 1. Federation of Malaya Established. This comprised British colonies on the Malay Peninsula.

1948, February–May. Communist Revolt Begins. This was mainly among the predominantly Chinese element of the population.

1948, June 16. State of Emergency Proclaimed. Guerrilla warfare flared through the Federation. U.K., Australian, and New Zealand troops reinforced the garrison. Terrorism became endemic.

1952, February 7. British Offensive Begins. General Sir **Gerald Templer,** High Commissioner and commander of government forces in the Federation, instituted a concerted, well-planned anti-insurgency campaign. Some 45,000 troops—regulars and special local forces—began warfare against the rebels, combat and psychological.

1954, February 8. Communist High Command Withdraws. British authorities in Kuala Lumpur announced that the Communist party's high command in Malaya had moved to Sumatra. While this was a victory for Britain in their 6-year war, it was also an indication of an attempt to establish a communistic Indonesian front.

1957, August 31. Federation Becomes a Constitutional Monarchy. It remained within the Commonwealth. By this time, the revolt had been suppressed for all practical purposes, though a few pockets of resistance remained in remote jungle areas.

1960, July 31. Emergency Officially Ended. The government announced that the crushing of revolt was completed. Total casualties: Communist rebels, 6,705 killed, 1,286 wounded, 2,696 surrendered; government troops, 2,384 killed, 2,400 wounded.

1962, December 8. Revolt in Borneo. This Indonesian-supported rebellion was quickly suppressed.

1963, September 16. Federation of Malaysia Proclaimed. This included Singapore, Sabah, and Sarawak added to the Federation of Malaya. The new state, a Free World bastion against Communist aggression and encroachments in Southeast Asia, at once became target for attack by Communist-oriented Indonesia (see p. 1422). British military support bolstered the Malaysian defense against interior terrorism and Indonesian raids.

1963–1966. Undeclared War with Indonesia. (See p. 1422.)

1964, May 3. Sukarno Announces Intent to Crush Malaysia.

1964, July 21–23. Communal Rioting in Singapore. The Communists incited Chinese rioting against Malaysia. Disorders were suppressed by police and troops.

1964, July 22. U.S. Pledges Support for Malaysia. This was to bolster the new nation against Indonesian threats.

1965, August 9. Independence for Singapore. By mutual agreement, the city of Singapore withdrew from Malaysia. Initially a British garrison remained responsible for the defense of Singapore.

1971, November 1. ANZUK Force Replaces British Garrison. Units from Australia, New Zealand, and the U.K. made up the new garrison. Singapore began to raise substantial armed forces to share this responsibility in a 5-power defense pact with Malaysia and the other 3 Commonwealth nations.

Indonesia

1945, August 17. Independence of Republic of Indonesia. This was declared by **Achmed Sukarno** and **Mohammed Hatta** after the collapse of Japan, in an effort to forestall Dutch reoccupation.

1945, September 29. British and Dutch Troops Arrive in Batavia. They began to disarm and repatriate Japanese forces, and to reestablish Dutch control over Netherlands East Indies.

1945, October 14. Hostilities Begin. The Indonesian People's Army declared war against occupying British and Dutch forces.

1945, November 6. Negotiations Rejected. Indonesian republicans rejected the Dutch offer of dominion status and home rule.

1945, November 29. Fall of Surabaya. British troops captured the rebel capital after an intensive battle with Indonesian nationalists.

1946, November 13. Cheribon Agreement. The Dutch recognized the Indonesian Republic (Java, Sumatra, and Madura) and U.S. of Indonesia—to include Borneo, Celebes, Sunda, and Molucca Islands—all under the Netherlands Crown. Clashes with the Dutch continued.

1947, May 4. Nationalists Proclaim Independence of West Java.

1947, July 20. Dutch Offensive on Java. U.N. intervention called for a cease-fire (August 4), but fighting went on despite continuing mediation efforts of the U.N. committee and of U.S. diplomats (1947–1948).

1948, December 19. Dutch Airborne Troops Capture Jogjakarta. This was the capital of the Indonesian rebels. The Dutch soon gained effective control of the entire island of Java (December 25).

1948, December 21. Cease-Fire.

1949, January 28. U.N. Security Council Orders Transfer of Sovereignty. The Netherlands refused, and sporadic hostilities continued.

1949, May 7. Cease-Fire. Dutch troops withdrew from Jogjakarta and Djakarta, new capital of the Indonesian Republic (June 30).

1949, November 2. The Netherlands Grants Full Sovereignty.

1950, August 15. Republic of Indonesia Is Proclaimed.

1950–1961. Endemic Civil War. Unrest, turmoil, and revolt throughout Indonesia, particularly on Sumatra and Celebes.

1955, April 18–27. Bandung Conference. Delegates from 29 Asian and African nations met at Bandung, and announced their aims as elimination of colonialism, independence and self-determination for all peoples, and membership for all nations in the U.N.

1957–1963. Indonesian Harassment against West New Guinea. The Indonesians claimed that this territory (called by them West Irian) should be given to them by the Dutch.

1962, January–August. Sporadic Hostilities. Indonesian torpedo boats off the coast of Dutch New Guinea were attacked by Netherlands forces (January 16). Soon afterward, a guerrilla campaign on Netherlands New Guinea was started by Sukarno (February 20).

1962, August 15. The Netherlands Agrees to Abandon West New Guinea. Formal transfer to Indonesia followed (May 1, 1963).

1962, December. Indonesian-sponsored Revolt in Brunei. The insurgency was suppressed by British troops.

1963, May 18. Sukarno Named President for Life.

1963, September 15. Harassment of Malaysia Begins. Following proclamation of the Federation of Malaysia, Sukarno refused to recognize the new federation, saying "we will fight and destroy it." Continual diplomatic and guerrilla harassment followed, with frequent infiltrations of Indonesian guerrillas into Malaysian territory (see p. 1421).

1965, January 21. Indonesia Withdraws from U.N. This was in protest at Malaysia's being given a seat on the Security Council.

1965, October 1. Communist Coup Effort. The Indonesian Army defeated the Communist effort, and a wave of anti-Communist, anti-Chinese violence swept the islands. The Army, under the leadership of Chief of Staff General **Abdul Haris Nasution** (who became Defense Minister), attempted to break up the Indonesian Communist Party (PKI).

1965, October–December. Massacre of the Communists. The Army and anti-Communist groups killed up to 100,000 PKI members. (Some estimates are much higher.) The result was considerable diminution of the power of President Sukarno, who had been supported by the PKI.

1966, February 21. Sukarno Dismisses Anti-Communist Members of Government. In Sukarno's effort to restore his own power, General Nasution was one of 15 anti-Communist cabinet members dismissed and replaced by left-wingers. There was an immediate violent reaction. Three students, demonstrating outside the Presidential Palace, were killed by police; rioting spread through Djakarta and Java (February 24). Thousands more suspected Communists were killed.

1966, March 12. Military Seizes Control; Sukarno a Figurehead. Leader of the military partial coup d'état was Lieutenant General **Suharto.** The PKI was outlawed; pro-Communists were purged from the government. Sukarno's few remaining powers were later taken by Suharto (February 20, 1967).

1966, June 1. End of Hostilities with Malaysia. This was announced after four days of peace talks in Bangkok, although the status of Sabah and Sarawak on Borneo remained unresolved.

1966, August 11. Treaty With Malaysia. Signed in Djakarta, this formally ended the undeclared hostilities.

1966, September 28. Indonesia Rejoins the U.N. The U.S. resumed economic aid.

1968, March 27. Suharto Named President. This was proclaimed by the Consultative Assembly, formally ending the regime of Sukarno. Five years later Suharto was re-elected (March 1973).

PHILIPPINES

1946, July 4. Republic of the Philippines Established.

1946–1954. Hukbalahap Rebellion. This Communist-led peasant party, dominating central Luzon, conducted civil war against government troops for nearly a decade before being subdued. Primary responsibility for success of the antiguerrilla operations was that of **Ramon Magsaysay,** minister of defense.

1947, March 14. Agreement with U.S. Ninety-nine-year base agreement between the United States and the Philippines.

1952, April 15. Huk Leader Captured. Philippine troops captured **William J. Pomeroy,** leader of the Communist-led Hukbalahaps.

1954. The Philippines Join SEATO. (See p. 1410.)

1962, June 22. The Philippines Claim Sabah Province, North Borneo. This was based upon prior ownership by the Sultan of Sulu before Sabah was seized by Britain in the 19th century. The claim created subsequent tension with Malaysia.

1964–1974. Guerrilla War against Communist "Huks." Recovering from defeat in the early 1950s (see p. 1422), the Philippine Communist party created a new military arm, successor to the Hukbalahap, called Hukbong Magagpalaya Nang Bayan (People's Liberation Army), operating mainly in central Luzon. The tactics of these new "Huks" were similar to those of the Viet Cong, combining terror and assassination with selective measures to gain local good will. Government suppressive activities prevented the Huks from major success but were unable to destroy the guerrillas.

1966, September 16. Agreement Reduces U.S. Base Lease. The term of U.S. leases on bases in the Philippines was reduced from 99 to 25 years.

1966, September 25. Philippine Construction Battalion Reaches Vietnam. The force, eventually reaching 2,000 men, was initially 1,000 strong. It was sent to demonstrate adherence to SEATO policy.

1970–1974. Moslem Insurgency in Southern Islands. Low-level warfare was waged, taking advantage of traditional Moslem-Christian hostility.

1972, September 23. Martial Law in the Philippines. Proclaimed by President **Ferdinand Marcos** as a "last desperate step" to save the islands from Communist-inspired insurgency and chaos, because of the Huk and NPA insurgencies in Luzon and Mindanao. Political opponents claimed this was merely an excuse for dictatorship.

EAST ASIA

Asian and Pacific Council

The Asian and Pacific Council (ASPAC) was established by 9 anti-Communist nations, meeting in Seoul (July 14–16 1966). The members were: Japan, South Korea, the Republic of China (Taiwan), South Vietnam, Thailand, Malaysia, the Philippines, Australia, and New Zealand. At this first meeting the new organization announced its determination to preserve "integrity and sovereignty" in the face of Communist threats, particularly from the People's Republic of China. Other than occasional statements of general support for the efforts of South Vietnam against its Communist enemies, ASPAC has had little influence and has not figured prominently in the policies of any of its members.

China (National Republic)

The civil war between the National Government (of the Kuomintang party) and the Chinese Communist party, which began in 1926, and which was only partially interrupted by the war against Japan, burst into even fiercer flames at the time of the Japanese surrender. **Chiang Kai-shek**'s National Government, decisively defeated, withdrew from the mainland to Formosa (1949), where with U.S. support it defiantly continued to claim to be the legal government of China, now ruled from Peking by **Mao Tse-tung.** The principal events were:

1945, August 14. Treaty with U.S.S.R. This pledged friendship and alliance between Soviet Russia and Chiang Kai-shek's Nationalist Government (see p. 1383). The Manchurian Railway and the port of Dairen were to be held in joint ownership for 30 years. Port Arthur was to

become a Soviet-Chinese naval base and the independence of Outer Mongolia recognized.

1945, August. Renewed Chinese Civil War. Chinese Communist forces moved to take over as much of the Japanese-occupied areas as possible, ignoring Chiang's orders to halt. To permit Nationalist compliance with agreed Allied terms of Japanese surrender, and to forestall Communist take-over of all North China, General **Albert C. Wedemeyer,** still Chiang's Chief of Staff, provided American sea and air lift (August–October) to move Nationalist forces to Central and North China. By mid-October about 500,000 Nationalist troops had been so moved.

1945, August 28. American-Sponsored Nationalist-Communist Negotiations. After persuading Chiang to issue an invitation, U.S. Ambassador **Patrick J. Hurley** personally escorted Mao to Chungking for a peace conference. After nearly 2 months, this broke down, when Nationalists discovered that a large Communist force under General **Lin Piao** was quietly moving into southwest Manchuria.

1945, September 30. Arrival of U.S. Marines. To prevent an expected clash of Nationalist and Communist forces, the U.S. 1st Marine Division and other units were landed in eastern Hopei and Shantung. This force soon grew to about 53,000 men. They occupied Peiping, Tientsin, and coastal areas of both provinces.

1945, November 15. Nationalist Offensive in Southwest Manchuria. Nationalist requests to move troops into Manchuria by sea through the Liaotung Peninsula were rejected by the Soviets, who occupied the region under agreed Allied terms for Japanese surrender. Nationalist troops were landed at Chinwangtao, in the area held by U.S. Marines. They attacked across the Great Wall into regions held by Communists, outside the Russian zone of occupation. The well-trained, well-equipped Nationalists pushed aside the Communists and soon held the region as far as Chinchow (November 26).

1945, November 30. Communist Offensive in Shantung. Chen Yi's New Fourth Army occupied much of the province not already held by U.S. Marines.

1945, December 5. Hurley Accuses Foreign Service Officers. Disappointed by failure of his negotiation efforts, Hurley had resigned (November 26). He now charged that his failure had been largely due to obstructive efforts of pro-Communist American Foreign Service officers.

1945, December 14. Marshall as Mediator. U.S. General of the Army George C. Marshall, recently retired as U.S. Army Chief of Staff, was sent to China as personal representative of President Truman, with mission of mediating the dispute.

1946, January 14. Truce in China. Achieved as a result of Marshall's mediation. Despite frequent violations, and nonapplication in Manchuria, this truce remained in effect in most of China for nearly 6 months.

1946, February 25. Nationalist-Communist Accord. National Government and Communist representatives, meeting with General Marshall and other U.S. mediators, agreed to unify the Chinese armed forces into one national army with 50 Nationalist and 10 Communist divisions. This agreement broke down within a few weeks.

Operations in Manchuria, 1946–1948

1946, March 1. Soviet Forces Begin Withdrawal from Manchuria. Chinese Communist troops, scattered about the countryside, moved toward the cities, as Nationalist troops advanced up the main roads and railroads from the southwest. The Soviets had completely dismantled all Japanese-built factories and industrial facilities, and moved the equipment to Siberia. Vast stores of captured Japanese military equipment, however, were left behind by the Russians where they could be seized by the Chinese Communists, enough to equip the entire Chinese Communist Army.

1946, March 10–15. Battle for Mukden (Shenyang). The day following the Russian withdrawal from the city, a battle broke out for

control. The Nationalists were successful; they pushed northward.

1946, March 17. First Battle of Szeping. A massive Chinese Communist counterattack drove Nationalist spearheads back. The Communists entrenched this important rail center.

1946, April 14–18. First Battle of Ch'angch'un. A Nationalist contingent of 4,000, airlifted into Ch'angch'un, was driven out by numerically superior Communists.

1946, April 16–May 20. Second Battle of Szeping. The Nationalist New First Army, 70,000 veterans of the Burma Campaigns under **Sun Li-jen,** drove out 110,000 well-entrenched Communists, who claimed they had been attacked by American planes. The Nationalists immediately pushed north toward Ch'angch'un.

1946, April 25–28. Communists Seize Harbin and Tsitsihar. The National Government made no effort to seize these northern cities as the Russians completed their withdrawal from Manchuria (May 3).

1946, May 22. Communists Evacuate Ch'angch'un. Nationalist troops seized the city and continued their northward drive against ineffectual resistance.

1946, June 1. Crossing the Sungari. The Nationalists continued their drive toward Harbin, as Communist resistance stiffened.

1946, June 7–30. Cease-Fire in Manchuria. Brought about by efforts of General Marshall. The Nationalists halted at Shuangcheng. When negotiations broke down, hostilities resumed.

1946, June–December. Stalemate in Manchuria. During the truce the Communists had strengthened their defenses south of Harbin; the Nationalist advance was stalled. The Nationalists, now over 200,000 strong, held the principal centers of southern and central Manchuria, a bridgehead north of the Sungari, and controlled the railroads. The drain of garrisoning these areas precluded assembling and supporting forces large enough to continue the drive toward Harbin. The Communists, who had recruited the disbanded Manchukuan army, had a strength of over 500,000 and held the countryside, but were unable to mount effective attacks against the Nationalists. After cessation of U.S. military assistance (see below), Nationalist forces in Manchuria went completely on the defensive, to conserve supplies and to permit Nationalist offensives elsewhere in China (see p. 1426ff).

1947, January–March. Communist Sungari River Probes. General Lin Piao, commanding Communist forces in Manchuria, launched three offensives across the Sungari, southwest of the Nationalist bridgehead. All were repulsed.

1947, May–June. Sungari River Offensive. Some 270,000 Communists converged on Ch'angch'un, Kirin, and Szeping. All three cities were isolated, and supplied by air. The Nationalists evacuated their bridgehead. Two Nationalist armies were rushed north from Liaotung.

1947, June–July. Third Battle of Szeping. The Communists briefly occupied the rail center (June 16), but were finally repulsed. A lull followed, as both sides prepared for further action (July–August).

1947, September 20. Communists Begin Liaosi Corridor Offensive. The purpose was to cut off Mukden from overland communications to North China. Counter-offensive by Nationalist field commander in Manchuria, **Cheng Tung-kuo,** finally secured the corridor (October 10).

1948, January–February. Renewed Liaosi Corridor Offensive. Chiang Kai-shek flew to Mukden to take personal command. Nationalist counterattacks again secured the corridor. Chiang returned to Nanking.

1948, March–September. Nationalist Erosion. Steady Communist pressure eroded the Nationalist defenses. Nationalists evacuated Kirin to strengthen isolated Ch'angch'un. The defensive attitude and psychology adversely affected Nationalist morale.

1948, September 12. Renewed Liaosi Corridor Offensive. The Communists seized the corridor, repulsing all Nationalist efforts to reopen the line of communications to the south. Chiang flew to Peking to assume command. Finding the situation in Manchuria to be hope-

less, he ordered the garrisons to withdraw, fighting their way south. Ch'angch'un was evacuated (October 21).

1948, October 27–30. Battle of Mukden-Chinchow. Retreating Nationalist columns, 3 armies, were struck by a massive Communist counteroffensive. All were killed, captured, or dispersed. The Nationalist commander, General **Liao Yueh-hsiang,** competent Burma veteran, was killed.

1948, November 1. Fall of Mukden. The small remaining Nationalist garrison surrendered. By the end of the year the Communists held all of Manchuria. The Nationalists had lost 300,000 of their best troops.

Operations in North and Central China, 1946–1949

1946, May 1. National Capital to Nanking. The Chinese government officially returned to Nanking from Chungking.

1946, May 5. Hostilities at Hankow. This was one of many breakdowns in the cease-fire established in January (see p. 1424).

July–November. Nationalist North China Offensive. Claiming the provocation of frequent Communist truce violations, Chiang ordered a major offensive to seize North China, hoping to prevent Communists from entrenching themselves. The offensive was highly successful. The Nationalists recovered most of Kiangsu, reopened the Tsinan-Tsingtao railway in Shantung, occupied Jehol and much of Hopeh. The Communists undertook minor counteroffensives, winning temporary successes along the Lung-Hai Railway (Sian-Kaifeng-Hsuchow) and in north Shansi.

1946, July 29. U.S. Halts Military Equipment Assistance. General Marshall, annoyed by the Nationalist offensive, and under strong Communist propaganda attack for U.S. assistance to the Nationalists, ordered an embargo of all U.S. military assistance to both sides. This actually only affected the U.S.-equipped armies of the National Government. Chiang ordered units in Manchuria to go on the defensive, but continued the North China offensive in belief he could win before supplies ran out. This U.S. action had serious psychological as well as practical effects on the National military situation.

1946, September. U.S. Marines Begin Withdrawal. This was interpreted by many Chinese as further evidence of U.S. abandonment of the National Government.

1946, November 8. Chiang Orders Nationalist Cease-fire. He informed General Marshall that he was willing to resume negotiations. Nationalist overtures and U.S. mediation efforts were rejected by the Communists.

1947, January 6. Failure of the Marshall Mission. At Marshall's request, he was recalled by President Truman. Marshall left China, criticizing both sides (January 7). Remaining U.S. Marines in North China (about 12,000) were ordered to withdraw, save for one regiment left in Tientsin under terms of 1901 Boxer Protocol.

1947, January–December. Nationalists on the Defensive. They held the towns and main railroads. Elsewhere the Communists seized the initiative, save for one continuing Nationalist offensive in Shensi.

1947, March 19. Nationalists Capture Yenan. The Nationalist offensive in Shensi captured the Communist capital; Mao Tsetung was forced to flee. Elsewhere the Communists held the initiative, and Mao refused to call back any troops from more important theaters of the war to defend his capital.

1947, October. Communist Offensives. Coordinated with offensives in Manchuria, **Liu Po-ch'eng**'s Central Plains Army and Chen Yi's East China Field Army were active in the area between the Yangtze River and the Lung-Hai Railway and in Shantung. Chen Yi's forces cut the railroad line north of Kaifeng, cutting the main line of communications of Nationalist armies in North China.

1948, March–April. Communist Offensive in Shensi. Troops of General **P'eng Teh-huai** recaptured Yenan (April).

1948, May–September. Communist Offensives in Yellow River Valley. Armies of Chen and Liu steadily reduced Nationalist holdings north of Yellow River. This offensive

culminated in the **Battle of Tsinan** (September 14–24), in which 80,000 Nationalist troops defected or were captured.

1948–1949, November–January. Battle of the Hwai Hai. Under overall command of Chen Yi, his army and Liu Po-ch'eng's attacked the Nationalist Seventh and Second Army groups, deployed along the Lung-Hai Railway generally east of Kaifeng. About 500,000 troops were involved on each side. While the East China Field Army pinned down the Seventh Army Group, between Hsuchow and the sea, the Central Plains Field Army smashed into and through the flank of the Second Army Group, west of Hsuchow toward the Hwai River. Efforts of the Seventh and Second Army Groups to retreat to the Hwai were blocked. Much of the Second Army Group broke through, but the Seventh Army Group was destroyed. Total Nationalist casualties exceeded 250,000 men; among those killed were the commanders of both Nationalist Army groups.

1949, January 21. Chiang Resigns. Vice President **Li Tsung-jen** became Acting President.

1949, January 22. Fall of Peking. Nationalist General **Fu-Tso-yi** surrendered to the Communists after a long siege. Mao Tsetung soon thereafter moved the Communist capital to Peking from Yenan.

1949, February. Evacuation of Last U.S. Troop Contingent. Withdrawal of the U.S. 3rd Marine Regiment from Tientsin was considered by both sides to indicate American abandonment of the National Government.

1949, April 1. Nationalist Peace Effort. Li Tsung-jen sent a delegation to Peking to seek Communist agreement to a division of China at the Yangtze. The Communists rejected this, insisting upon Nationalist surrender.

1949, April 20. Communists Cross the Yangtze River. Liu Po-Ch'eng's redesignated Second Field Army and Chen Yi's Third Field Army crossed on a broad front between Nanking and Wuhan. During the crossing two British warships on the Yangtze were attacked and severely damaged by Communist artillery. As Communist troops approached Nanking, the movement of the National Government capital to Canton (begun January 19) was completed.

1949, April 22. Fall of Nanking. This was followed by the capture of Hsuchow (April 26), Wuhan (May 17), Nanchang (May 23), and Shanghai (May 27). Two other important beleaguered cities north of the Yangtze also surrendered: Taiyuan (April 24) and Sian (May 20).

1949, May–December. Nationalist Collapse. Many Nationalist commanders and troop units defected to the Communists. As the Communist armies approached Canton (October), the capital was shifted to Chungking.

1949, August 5. U.S. White Paper. This State Department document, criticizing the National Government, formally announced cutoff of all further military aid.

1949, October 15. Fall of Canton. Chinese Communist troops occupied Canton without opposition. Chiang returned to head the collapsing National Government.

1949, November 30. Fall of Chungking. Chiang established a new capital at Ch'engtu.

1949, December 7. Withdrawal to Formosa. Chiang's government and all his remaining troops successfully completed withdrawal from the mainland as Communist columns approached Ch'engtu. Nationalist troops retained offshore islands of Quemoy, Tachen, and Matsu.

1950. National Government Reforms. Following institution of social and political reforms of the sort promised while the government was still on the mainland, the U.S. resumed economic and military assistance.

1950, June 25. Chiang Offers Military Assistance to U.N. in Korea. Favorably considered by General MacArthur, the offer was turned down by President Truman, who (June 27) ordered the U.S. Seventh Fleet to prevent either Red Chinese attack on Formosa or Nationalist assault against the mainland.

1950, July 24. Intensive Artillery Bombardment of Quemoy.

1951, January 30. U.S. Military Assistance Group Established.

1952, February 1. U.S.S.R. Censured by U.N.

General Assembly. A resolution was approved charging Russia with obstructing the efforts of the National Government of China to retain control of Manchuria following Japan's surrender, and giving military assistance to the Chinese Communists.

1953, February 2. Chiang "Unfettered." President Eisenhower declared that the Seventh Fleet would no longer "serve as a defensive arm of Communist China."

1954, August 17. Communist Threats against Formosa. President Eisenhower said that the Seventh Fleet would go to the defense of Formosa if the Chinese Communists should attempt to invade.

1954, September 3. Heavy Bombardment of Quemoy. Increased activity threatened an invasion of Formosa, and the Seventh Fleet moved to take up positions to defend it.

1954, December 2. Mutual Defense Treaty with the United States. Fear of further involvement of the U.S. in Asian war led to new restrictions on Nationalist China, whose territorial limits were described in the treaty (signed March 3, 1955) as "Formosa and the Pescadores." Communist bombardment of Quemoy and Matsu continued.

1955, January. Tachen Islands Threatened. Intense Chinese Communist pressure against the islands by airplane raids and small-craft raids. The U.S. Seventh Fleet helped to evacuate 25,000 military and 17,000 civilians from the islands (February 6–11). Meanwhile, President Eisenhower asked Congress for emergency powers to permit U.S. armed forces to protect Formosa and the Pescadores islands, and to assist the National Government in defending the islands (January 24).

1955, June 7. "De Facto" Cease-Fire. An uneasy truce settled over Quemoy and Matsu.

1958, August 23. Blockade of Quemoy by Communist Artillery. Continuous bombardment interrupted supply to the islands for both garrison and civilian population. Strenuous effort of Seventh Fleet, convoying supply by water and air, defeated the Red plan (September). The blockade fire gradually died down (October), dwindling to almost nothing (June 1958).

1962, March 24. Chinese Communist Planes over Quemoy. Rumors of pending invasion and heavy mainland troop concentrations produced another tense situation. Once again U.S. sea-power potential asserted itself. Chinese Nationalist planes shot down several Communist aircraft. The U.S. warned the Communists to keep hands off Quemoy and Matsu (January 22). All threat of invasion soon ended.

1962–1974. Civil War Continues. For several years tension between Formosa and the mainland was undiminished, with sporadic guerrilla operations by the Nationalists harassing the Chinese mainland. This tension abated, however, in the later 1960s, with only occasional, prepublicized, shellings of Quemoy reminding both sides that nominally, at least, they were still at war. Severe blows were struck at hopes of Nationalist return to the mainland first by the replacement of the Republic of China in the United Nations by the People's Republic (1972), and second by the United States' recognition of the rival government in Peking (1973).

China (People's Republic)

1949, September 21. People's Republic Proclaimed at Peking. Mao Tse-tung was named chairman of the Central People's Government; **Chou En-lai,** premier. Immediate recognition was granted by the U.S.S.R. and its satellites, also by India, Burma, and Ceylon. Great Britain soon recognized the new state (January 6, 1950).

1950, February 15. Treaty of Friendship and Alliance with U.S.S.R.

1950, April 23. Communist Conquest of Hainan Island Completed.

1950, October 7. Invasion of Tibet. **(See p. 1429.)**

1950, October 26. Intervention in Korean War. **(See p. 1359.)**

1954–1964, September 3. Bombardments of Quemoy. **(See p. 1427.)**

1957–1965. Rift with U.S.S.R. Increasing ideological differences and mutually conflicting power ambitions by the end of the period

widened the crack in the "monolithic" structure of world communism.

1959, August 29. Indian Border Violated by Chinese Troops. **(See p. 1405.)**

1960, January 28. Sino-Burmese Treaty. **(See p. 1411.)**

1960, June 3. Anti-Chinese Revolt in Tibet. **(See p. 1430.)**

1960, June 29. Border Friction with Nepal.

1962, October 20–November 21. India-China Border War. **(See p. 1405.)** Before the fighting ended, some 3,213 Indian soldiers and 800 Indian civilians had been made prisoner; total casualties are unknown. Prisoners were later returned (April 1963).

1963–1965. Chinese Support of North Vietnamese Aggression. **(See p. 1415.)** This became another issue exacerbating strained relations between the U.S.S.R. and Communist China.

1964–1974. Intermittent Border Violence along Sino-Soviet Frontiers. This was the result of tensions created by Chinese demands for return to China of vast areas of Soviet East Asia taken by Czarist Russia in the 19th century. Most incidents seem to have occurred at places where border demarcation was unclear.

1964, October 16. China Explodes Its First Atomic Bomb. China became the world's fifth nuclear power.

1966–1969. "Cultural Revolution." Unrest and violence spread throughout much of mainland China, apparently to some extent deliberately inspired by Chairman Mao Tse-tung for the purpose of rejuvenating the revolutionary spirit among members of the Communist party and the people. Initially the Army seems to have supported, or at least endured, excesses of Communist youth, but as the unrest continued unabated, Army leaders seem to have taken the lead in restoring order, apparently with the somewhat reluctant approval of Mao.

1966, October 27. China Reports Firing a Nuclear Missile. This was China's fourth nuclear explosion, the first in which actual weaponry was tested.

1967, June 17. China Explodes Its First Hydrogen Bomb. China's fifth nuclear explosion, like the others, was conducted at the test site at Lop Nor, in Sinkiang.

1969, March 2–15. Undeclared Combat Between Chinese and Soviet Troops. These clashes took place at different points along the Manchurian frontier. Although there had been no previous public announcements, these were mainly intensifications of armed clashes between Chinese and Soviet forces that had been going on for at least 5 years. Clashes occurred frequently in subsequent months, with both sides accusing the other of provocation.

TIBET

1949, November 24. Communist "Liberation" of Tibet Urged. This was a radio appeal from Peking by the **Panchen Lama**—refugee rival of Tibet's nominal ruler, the **Dalai Lama.** The Chinese Communist government soon announced its intention of doing just this (January 1, 1950).

1950, October. Chinese Communist Invasion. A large Chinese force swept across the frontiers despite a Tibetan appeal to the U.N. (November 10), soon overrunning the entire country. The Dalai Lama was permitted to remain as a figurehead ruler in Lhasa. Widespread revolt continued despite fierce Communist repressive measures (1950–1954).

1954, Spring and Summer. Widespread Revolt. This was suppressed by Chinese Communist troops. Most of the 40,000 rebels were killed or executed.

1956–1959. Renewed Unrest. Mass deportations, Chinese infiltrations, and forced Tibetan labor on the military highway connecting Lhasa and Chungking stirred the population.

1959, March 10–27. Rebellion. This was suppressed by Chinese Communist troops. The Dalai Lama fled from Lhasa to India, where political asylum was afforded. He formally accused Communist China of genocide and suppression of human rights, asserting that 65,000 Tibetans had been killed in the revolt, 10,000 young people and children deported to China, and 5 million Chinese moved into Tibet in a resettlement project.

1959–1974. Continued Guerrilla Warfare. Resistance was sporadic, weak, and relatively ineffective.

Mongolian People's Republic

1945, October 20. Mongolia Votes for Independence from China. This was the overwhelming result of a plebiscite required under the terms of the Sino-Soviet treaty of friendship and alliance (August 14 1945; see p. 1423).

1946, February 27. Treaty with the U.S.S.R. This treaty of friendship, for 10 years, has been regularly renewed.

1947, June 5–8. Mongolian Raid into Sinkiang. Mongolian troops attacked Peitashan to rescue Mongols captured by Chinese in prior border skirmishes.

1945, December 27. Moscow Declaration. The U.S., Soviet, British, and French foreign ministers announced the establishment of a U.S.–Soviet Joint Commission for the purpose of unifying Korea in accordance with the terms of the Cairo Agreement (see p. 1423).

1946–1947. Failure of the U.S.–Soviet Joint Commission. No agreement could be reached on the establishment of an interim government for all Korea.

North Korea

1948, May 1. Soviets Proclaim North Korean Independence. By establishing the Democratic People's Republic, the U.S.S.R. defied a planned U.N. plebiscite for all Korea. The president was veteran Communist **Kim Il Sung.**

1948, October 19–December 25. Russian Troops Withdraw. A large Soviet training mission remained in North Korea.

1950–1953. Korean War. (See p. 1355.)

1961, July 6. Treaty with the U.S.S.R. Soviet Russia provided assurance of defense protection, plus financial and military equipment assistance.

1968, January 23. *Pueblo* Incident. The The USS *Pueblo,* a Navy electronic intelligence vessel, was attacked and seized by North Korean gunboats, on the pretext that the vessel had violated the territorial waters of North Korea. U.S. naval forces, including the nuclear-powered carrier USS *Enterprise,* took station off the coast of North Korea, but no reprisals were taken.

1968, December 22. Release of the Crew of the *Pueblo.* This was the result of a complicated agreement with North Korea, whereby the United States representative on the Mixed Armistice Commission in Panmunjon signed a "confession" that the vessel had been engaged in "espionage," then immediately, and with the agreement of the North Koreans, denounced the document as false.

1969, April 15. North Koreans Shoot Down U.S. Reconnaissance Plane. The attack by North Korean aircraft took place about 100 miles off the coast of North Korea. Again U.S. naval forces threatened North Korea, but no action was taken.

South Korea

1948, August 15. Proclamation of the Republic of Korea. This was the result of U.N.-supervised elections early in 1948. The first president of the new republic was **Syngman Rhee.**

1948, October 20–27. Communist-Inspired Army Revolt. A Communist cell in a military unit sparked an uprising which briefly controlled the cities of Yosu and Sunchon in southern South Korea. After vicious fighting, in which at least 1,000 were killed on both sides, loyal troops and police suppressed the insurrection. Another revolt in Taegu was quickly subdued (November 3).

1948–1950. Tension in Korea. Border incidents, Communist infiltration across the border, and Communist-inspired disorders throughout South Korea continued and intensified.

1949, June 29. Withdrawal of U.S. Occupation Forces Completed. (See p. 1354.)

1950, June 25. North Korean Invasion of South Korea. (See p. 1355.)

1950–1953. Korean War. **(See p. 1355.)**

1953–1971. Continued Tension. Deliberate Communist violations of armistice force limitations in North Korea caused the U.S. and South Korea to announce a compensatory build-up of forces and weapons (beginning June 21, 1957). North Korean raids intensified during the period 1967–1971, but no large-scale hostilities occurred.

1960, April 6–27. Korean Violence Forces Resignation of Rhee. Demonstrations and protests by students against the repressive regime of President Syngman Rhee led to widespread riots and disorders. Rhee's efforts to reorganize the government failed to satisfy the protesters, and Rhee resigned, apparently in part as a result of pressure from the United States. Foreign Minister **Huh Chung** became the acting president under the constitution.

1961, May 16. Coup d'État. General **Chung Hee Park** seized power and dismissed the existing government. Later Park was formally elected president (October 15, 1963).

1965, February 25. First South Korean Troops Arrive in South Vietnam. A contingent of 600 troops arrived, scheduled to be increased to 2,000. By early 1966 this force had risen to 21,000, and by late October 1966, to 41,000, including 2 divisions organized as a corps. This was a demonstration of solidarity with the United States.

Japan

1945–1951. MacArthur as Supreme Commander for the Allied Powers. Under the firm control and guidance of MacArthur's military government, the Japanese government and nation began recovery from the devastation of the war.

1946, November 3. New Constitution. This became effective May 3, 1947. Among its provisions was a renunciation of the right to wage war.

1951, September 8. Peace Treaty with the Allies. Unable to obtain Soviet agreement to negotiate a peace treaty, the U.S. and 48 other non-Communist nations signed a treaty with Japan (effective April 28, 1952). At the same time, the U.S. signed a bilateral defense agreement with Japan.

1951–1954. Japan Begins Limited Rearmament. Despite apparently sincere devotion to the war-renunciation clause of the constitution, it became apparent to Japan that internal and external security required military forces. With U.S. encouragement, Japan began to develop small "self-defense forces."

1954, March 8. Mutual Defense Agreement with U.S. Under this the U.S. was to give Japan about $100 million in subsidies for production of munitions and food.

1954, July 1. Official Rearmament Approved. After prolonged national and legislative debate, Japan enacted legislation authorizing new armed forces.

1956, October 19. State of War with Russia Terminated. A joint Japanese-Soviet declaration.

1960, January 19. Renewed Mutual Defense Treaty with the U.S.

1972, May 15. Okinawa Returns to Japanese Control. This was a result of a treaty with the United States (June 17, 1971).

1972, September 29. Peace Treaty with Communist China. Signed by Japanese Prime Minister **Kakuei Tanaka** and Chinese People's Republic Prime Minister **Chou En-lai,** this ended the state of war which had technically existed between Japan and China since 1937. Simultaneously Japan severed relations with the Republic of China (Formosa).

AFRICA

Before World War II, Africa, the second largest continent in land area, included but one truly independent nation: tiny, unimportant Liberia. The Union of South Africa, in fact independent,

as a dominion was a part of the British Empire. Egypt, nominally independent, was actually under British protection and influence. Ethiopia, which had been truly independent, had recently been conquered by Italy (see p. 1139). In the 20 years after World War II, complete independence was achieved by all nations and regions of Africa, save for a few insignificant Spanish coastal colonies and the large Portuguese colonies of Angola and Mozambique. This achievement of independence, however, did not in the slightest halt the working of the forces of nationalism (and related anticolonialism) in the independent nations or in the few remaining colonial areas. Revolution, new nationalism, new and indigenous imperialism, Communist subversion (of two varieties, one directed from Moscow and the other from Peking), racial antagonisms, and sweeping technological change kept most of Africa in constant turbulence for the entire period. There were internal and external military actions and hostilities of one sort or another in practically every nation and colonial region of the continent. Only the most important will be noted here.

Organization of African Unity

The Organization of African Unity (OAU) was formed in 1963 through the efforts of the leaders of Nigeria, Ethiopia, and Guinea and was the culmination of earlier efforts to form a broad-based continental organization. All African countries are members except South Africa and Rhodesia. The charter prescribes noninterference in the internal affairs of states, observance of sovereignty and territorial integrity of members, peaceful settlement of disputes, condemnation of political assassination and subversive activities, nonalignment with power blocs, and emancipation of the white-ruled African territories. (The OAU Liberation Committee supports the various liberation movements directed against the white-dominated regimes.)

The OAU succeeded in arbitrating the Algerian-Moroccan border war of 1963 and in helping Tanzania replace with African troops the British troops which had quelled its 1964 army mutiny. However, it was ineffective in assisting Zaire (then Democratic Republic of the Congo) during its rebellion in 1964–1965, in resolving the Nigerian-Biafran civil war in 1969, in reconciling various rival liberation movements, or in successfully prosecuting a war of liberation in Southern Africa or Rhodesia. Following an allegedly Portuguese-inspired mercenary raid on Guinea (December 1970) consideration was given to establishment of a common African army, but nothing came of that. At a meeting of African leaders at Cairo, July 21, 1964, it was agreed that nuclear weapons would be banned from Africa.

African and Malagasy Common Organization

The African and Malagasy Common Organization (OCAM) was formed in 1965 as an outgrowth of earlier attempts at cooperation among French-speaking states, including the African and Malagasy Union and the Regional Council of France, Ivory Coast, Niger, and Dahomey. Aside from political and economic motives, the prime factors were establishment of a common front to meet Ghana's then subversive activities, Chinese Communist infiltration and subversion, and endemic chaos in the former Belgian Congo (now Zaire). OCAM is largely consultative, and no common defense staff or organization exists. Most members still have

bilateral defense treaties with France, which ensures their immediate internal and external security when threatened beyond their means to cope. The 14 members are: Cameroon, Central African Republic, Chad, Congo (People's Republic of the Congo), Dahomey, Gabon, Ivory Coast, Malagasy Republic, Niger, Rwanda, Senegal, Togo, Upper Volta, and Zaire.

North Africa

Algeria

1945–1954. Autonomy Demanded. The first clash (May 8, 1949) between nationalists and French caused the death of 88 French and more than 1,000 Algerians.

1954–1962. Open Rebellion. The FLN (Front de Libération Nationale, organized 1951) started organized warfare, which was to continue until freedom had been attained. Use of Tunisian bases by the FLN strained French relations with Tunisia (see p. 1435). The insurrection drew nearly one-half of the entire French Army into Algeria, with resulting casualties of 10,200 French soldiers and some 70,000 Algerian insurgents killed.

1958, May 13. French Officer Uprising. Brigadier General **Jacques Massu** established a Committee of Public Safety, protesting against political leadership in the war. This started the chain of political events in France that brought de Gaulle to power (see p. 1377).

1958, June 1. De Gaulle Offers Self-Determination by Referendum. This was opposed by the *pieds noirs* (Algerians of French descent). Rioting and terrorism were manipulated by the "Secret Army" (or OAS, an extremist group organized by *pieds noirs* and French military men). De Gaulle visited Algeria and demanded dissolution of the Committee of Public Safety, restoring French government control in Algeria.

1960, January 22–February 1. Uprising of French Rightists in Algiers. They were opposed to de Gaulle's policy of self-determination for Algeria. This was suppressed by loyal French troops under General **Maurice Challe.**

1961, January 6–8. French Voters Support de Gaulle's Algerian Program. An overwhelming majority approved a referendum to permit Algerian self-determination.

1961, April 22–26. French Military Revolt. A mutiny headed by Generals Challe and **Raoul Salan** was quickly put down (April 25) by loyal French troops on de Gaulle's order (see p. 1377). Salan escaped and directed intensified OAS terrorism in France and Algeria.

1961, May 20. Peace Talks Begin. These took place at Evian-les-Bains in France between representatives of the French government and the rebel Algerian provisional government.

1962, March 7–18. Cease-Fire. Evian negotiations brought a cease-fire between Moslem nationalists (FLN) and French Army. **Ahmed Ben Bella** was chosen as premier.

1962, July 3. Algerian Independence.

1962–1965. Continuing Internal Unrest. There was widespread opposition to Ben Bella's relatively inefficient and dictatorial government, closely aligned with the U.S.S.R. and with the U.A.R. There were several mutinies, revolts, and uprisings around the country.

1963, October 6–12. Berber Revolt. Under the leadership of a dissident Army officer, Colonel **Mohand ou el Hadj,** Berber tribesmen of the Kabylin Mountains region rose against the government. President Ben Bella claimed the insurgency was incited by Morocco, as a result of tense relations over a border dispute (see below). The defeated rebels were forced to flee into the mountains. Colonel Mohand soon ended his revolt and joined in the war against Morocco (October 24).

1963, October 13–30. Border War with Morocco. **(See p. 1435.)**

1965, June 19. Overthrow of Ben Bella. Control of the nation was seized in a near-bloodless *coup d'état* by the army commander, Communist-trained Colonel **Houari Boume**

dienne, a hero of the revolution against France, who was soon installed as president (July 5).

1967, December 13. Attempted Coup d'État. The uprising, involving army officers, was suppressed.

1967, June. Algeria Sends Contingent to Support Egypt. (See p. 1343.)

Libya

1949–1951. Anticolonial Rioting. This was directed at both British occupation authorities and Italian administration.

1951, December 24. Independence of Libya.

1953, July 29. Treaty with Britain. This gave Britain 20-year rights to maintain military establishments in Libya, in return for which Britain was to pay Libya £1 million a year for 5 years for economic development and £2.75 million a year to aid in balancing the Libyan budget.

1954, September 9. Agreement with the U.S. An agreement was signed in Benghazi, giving the United States use of air bases in Libya in return for payment of $5 million in 1954, $2 million yearly for 20 years.

1969, September 1. Coup d'État. King **Mohommed Idris Al Mahdi as-Sanusi** was overthrown, while out of the country, by a military uprising led by young officers, of whom the leader was Captain **Muammar el Qaddafi.**

1969, December 10. Unsuccessful Coup Attempt. Qaddafi blamed "invisible foreign hands."

1970, January 21. Sale of French Aircraft to Libya. The sale of 100 French Mirage-III supersonic fighter jets to Libya was seen by most of the world as a transparent French evasion of their own embargo on weapons for the warring nations of the Middle East, since it was generally assumed (despite French denials) that these planes would be turned over by Libya to Egypt.

1970, June 11. Departure of Last Americans. As a result of pressure from the government of President Qaddafi, the United States abandoned Wheelus Air Force Base in Libya.

1971, September 1. Loose Union with Egypt and Syria. (See p. 1395.)

1972, August 2. Agreement to Unite with Egypt. This was the result of 3 days of conversations between Presidents Sadat of Egypt and Qaddafi of Libya at Tobruk and Benghazi.

1973, August 29. Reaffirmation of Unification with Egypt. The joint announcement by Sadat and Qaddafi made it clear that the unification would be a slow and gradual process, despite the obvious desire of Qaddafi for immediate union.

1974, January 12–14. Plan for Union with Tunisia. Joint announcement of the merger (January 12) was soon followed by a Tunisian announcement (January 15) that it would be delayed, probably indefinitely.

Morocco

1947–1953. Nationalistic Unrest. Sultan **Mohammed V** gave his support to the nationalist movement, in defiance of the French administration.

1953, August 15–20. French-Inspired Uprising. Tribal leaders in Marrakesh rose against the sultan, under the influence of pro-French leader **Thami Al-Glaoui.** The sultan was deposed and sent into exile by the French.

1953–1955. Increased Unrest. Terrorism and guerrilla operations of nationalists spread throughout Morocco.

1955, August 19–November 5. Intensified Guerrilla Hostilities. French efforts to suppress the risings of Berber tribes and the terrorism in the countryside and in the cities were not very successful.

1955, November 5. France Agrees to Independence. Mohammed V was restored to power.

1956, March 2. Protectorate Status Ceases. France and Morocco by mutual agreement terminated the Treaty of Fez (March 30, 1912). Spain relinquished her protectorate over Spanish Morocco (April 17), and the international status of the Tangier zone later ended (October 29).

1957–1964. Foreign Troops and Bases Withdrawn. Morocco called for evacuation of foreign troops. The last of a large complex of U.S. air bases was returned in 1964; French and Spanish forces had been previously withdrawn. As the period ended, the enclave of Spanish Sahara still remained *in statu quo.*

1957, November–December. Border Clashes at Ifni. Moroccan irregulars were repulsed by Spanish troops after seizing much of the colony. Later Spain ceded Ifni to Morocco (April 1, 1958).

1958, October 21. Pro-Monarchist Revolt. Army units, supporting King Mohammed V in his dispute with the Istiqlal Party, were attacked by loyal troops. Although disowned by the King, they were soon joined by Rif tribesmen in the Tasa area (November).

1959–1960. Revolt in Rif. Antigovernment operations in the Rif continued (see above) despite severe rebel defeats (January 1959) until the region was finally pacified (April 1960). Leader of the government troops was Crown Prince **Montay Hassan.**

1963, October 13–November 4. Border War with Algeria. Large-scale hostilities broke out along a disputed frontier area in the Atlas Mountain-Sahara Desert region after prolonged tension and a number of incidents. A cease-fire was arranged through the mediation of Emperor Haile Selassie of Ethiopia and President **Modibo Keita** of Mali. The Moroccans had the better of the fighting in the Hassi-Beida, Tindouf, Figuig area.

1971, July 10. Attempted Coup. The revolt was suppressed in bloody fighting which began when insurgents attacked the royal palace during a birthday party for King **Hassan II.**

1972, August 17. Attempted Coup. The leader of the revolt, trusted General **Mohommed Offkir,** Minister of Defense since the previous coup attempt, committed suicide when an attempt to shoot down the King's plane failed.

1973, March 2–7. Guerrilla Activity. Guerrillas, apparently from outside the country, disrupted at least 2 towns in southern Morocco. They were defeated and more than 100 were captured, some admitting support from Libya.

Tunisia

1952, March. Violence and Unrest. National self-determination came to a boiling point in disorders and riots directed against French rule.

1955, June 3. Full Internal Autonomy Granted by France. This was effective September 1.

1956, March 17. Independence. All former treaties and conventions were abrogated. **Habib Bourguiba** was chosen premier (March 25). France retained several military bases.

1956, July 25. Republic Proclaimed. Bourguiba became president. Despite disagreements—and one subsequent conflict—with France, Bourguiba kept his nation oriented to the West.

1957, May 26–June 7. Clashes with France. These were the result of activities of French and Tunisian troops in the vicinity of the Algerian border. Similar incidents occurred sporadically until the end of the insurgency in Algeria (see p. 1433).

1958, February–June. Clashes with France. These sporadic border incidents were mostly French punitive action in response to Tunisia-based operations of Algerian nationalists.

1961, July 19–22. Hostilities with France. **(See p. 1377.)** Tunisian attacks against French military posts brought prompt retaliation. French troops occupied Bizerte. Hostilities were ended by U.N. mediators.

1962, June. French Evacuation Completed. Air-base rights were retained by France.

1962, December 22. Unsuccessful Coup Attempt.

1965, April 28. Tunisia Boycotts Arab League Meetings. This was because the other states refused to consider President Bourgiba's proposals for peace negotiations with Israel.

1966, October 3. Tunisia Breaks Relations with United Arab Republic. This was a result of continued disagreement about peace negotiations with Israel.

1974, January 12–15. Plan for Union with Libya. **(See p. 1434.)**

East Africa

Ethiopia

1952, September 11. Union with Eritrea. Moslem Eritrea and Christian Ethiopia were united in a federation.

1954, May 14. Agreement with the U.S. Ethiopia gave the United States 99-year military base rights.

1960, December 13–17. Military Revolt. During the absence of Emperor Haile Selassie, members of the Imperial Guard seized control of Addis Ababa and proclaimed Crown Prince **Asfa-Wossen** the new emperor. Loyal troops suppressed the rebellion. The emperor pardoned his son, who had apparently acted under duress.

1964. Frontier Warfare with Somalia. **(See p. 1437.)**

1965–1974. Revolt in Eritrea. Eritrea's Assembly had voted unanimously for permanent union with Ethiopia (November 14, 1962). However, nationalist, Communist, and pan-Arab elements had joined forces to compel dissolution of the union. This dissidence, apparently financed by neighboring Arab states (primarily Sudan and Somalia), flared into guerrilla war.

1971–1974. Intensification of Eritrean Revolt. The Eritrean Liberation Front (ELF) stepped up guerrilla-terrorist activities against the government that spread to Addis Ababa.

1974, February 26–28. Army Mutiny. This spread from Asmara to Addis Abada. In an effort to retain control, Emperor Haile Selassie formed a new cabinet and raised Army pay. The nation remained, however, under virtual military control.

1974, June 28. Army Seizes Control. The Emperor became a figurehead, and his remaining power was soon reduced (August 16).

1974, September 12. Army Deposes Haile Selassie. Crown Prince **Asfa Wossen,** in Geneva, said he would serve as a constitutional monarch, as the Army demanded, but he didn't return. General **Aman Michael Andom,** chairman of the Provisional Military Government, became virtual head of state.

1974, November 22–24. Coup d'État. A power struggle among leaders of the Military Council ruling Ethopia led to the ouster of General Aman (November 22), who was killed the next day during, or executed after, an armed clash of rival forces near his home. This was followed by the execution of about 60 former officials, including 32 military officers as well as cabinet ministers, provincial governors, and members of the nobility, including at least one royal prince. One reason for the power struggle was differences in philosophy and policy with respect to the continuing Eritrean separatist insurrection.

Kenya

1945–1952. Unrest and Violence. This British crown colony became a hotbed of revolution. A secret organization—the Mau Mau—began a campaign of dissidence, which finally erupted in an appalling area-wide blood bath, white colonists and native negroes alike, men, women, and children, being murdered under conditions of terror and treachery.

Mau Mau Revolt

1952, October 20. Britain Declares a State of Emergency. Britain sent a warship and troops to Kenya to restore order and to suppress the Mau Mau uprising. Guerrilla war spread.

1953, January–May. British Military Measures. Major military and punitive measures were initiated. Leading Kikuyu tribe nationalist leaders, known or suspected to have connections with the Mau Mau Society, were arrested, tried, and convicted, including a 7-year prison sentence for Mau Mau leader **Jomo Kenyatta** (October 20). Central Kenya was sealed off from the rest of the country, and a separate East African command comprising

Kenya, Uganda, and Tanganyika was set up under General Sir **George Erskine.**

1953, June 15. British Victory in the Aberdare Forest. More than 125 Mau Mau were killed, bringing the total of terrorists killed since October to approximately 1,000. Meanwhile, the colonial government undertook measures to improve housing conditions in Nairobi, and soon afterward dropped leaflets over known Mau Mau strongholds promising lenient treatment to all who surrendered and who were not guilty of murder or serious crimes.

1955, February–June. Climactic Campaign Begins. Some 10,000 troops dispersed about 4,000 terrorists in the Mt. Kenya and Aberdare areas.

1955, September 2. Britain Begins to Reduce Forces. Since October 1952, almost 10,000 terrorists had been killed, 1,538 had surrendered, and over 24,000 had been captured or were held as suspects. The campaign against the remaining scattered dissidents continued into early 1956.

1961, August 14. Kenyatta Released from Prison. He immediately became leader of the principal political independence party and began negotiations with the British for independence.

1963, March. Frontier Clashes with Somalia. Somali claims to frontier regions of northern Kenya led to border hostilities. Somalia broke relations with Britain (March 14).

1963, June 1. Kenyatta Prime Minister of Kenya.

1963, December 12. Independence of Kenya. She became an independent state within the British Commonwealth of Nations. Assured by the new status, and under promise of amnesty, Mau Mau adherents began surrendering en masse.

1963, December. Diplomatic Relations Broken with Somalia. Serious border warfare broke out.

1964, January. Unrest and Violence. Communist-inspired violence spread from Zanzibar and Tanganyika.

1964, January 25. British Troops Restore Order in Kenya. British intervention was requested by Kenyatta to suppress Communist-inspired native uprisings. The period ended with the nation threatened by internal turmoil and external war.

1968, January 31. Peace with Somalia. An informal understanding of October 1967 was affirmed by the resumption of diplomatic relations.

Malagasy Republic (Madagascar)

1947–1948. Revolt against France. A nationalist uprising, centering on the east coast, was suppressed by French troops after much bloodshed.

1960, June 25. Independence. The Malagasy Republic elected to remain a member of the French community.

1971, April 1. Rebellion Suppressed. Leftist rebels in Tulear Province, southern Madagascar, were overwhelmed by loyal troops.

1972, May 18. Military Coup d'État. The government of President **Philibultsiranana** was ousted following 4 days of violence. General **Gabriel Pomanantsoa** became head of state.

Somalia

1948–1960. Anticolonial Disorders. These were directed against British occupiers and Italian administrators.

1960, July 1. Independence of Somalia. Italian and British Somaliland were combined as a single state. Somalia almost immediately claimed substantial regions of Ethiopia and Kenya, where Somali populations had been placed by arbitrary colonial frontiers.

1960, August 14. Border Clashes along Ethiopian Frontier.

1961, December 10. Unsuccessful Army Revolt.

1963–1968. Hostilities with Kenya. (See above.)

1964, February 8. Renewed Ethiopian-Somalian Hostilities. Despite a truce resulting from mediation of the Organization of African States, frontier warfare continued.

1968, January 31. Peace with Ethiopia.

1968, September 20. Peace with France. Frontier violence by Somali intruders into the French Territory of the Afars and Issas was ended by agreement.

1969, October 21. Coup d'État. Army and police officers joined to overthrow the regime and to establish a Supreme Revolutionary Council, under Army control.

1970, April 21. Unsuccessful Coup Attempt.

1971, May 25. Unsuccessful Coup Attempt.

Sudan

1953, February 12. Self-Government. Egypt and Great Britain signed an agreement providing for self-government in the Anglo-Egyptian Sudan.

1955, August 16. British and Egyptian Withdrawal Demanded. The parliament of Sudan asked Britain and Egypt to evacuate their troops from the Sudan in 90 days. Britain with 900 troops and Egypt with 500 agreed to be out by November 12.

1955–1972. Revolt in Southern Sudan. The black inhabitants of southern Sudan, in the jungled swamps of the Upper Nile, rebelled against the Arab-Moslem ruling group in Khartoum. Small-scale but bitter fighting continued for 8 years.

1956, January 1. Independent Republic Proclaimed.

1958, November 17. Military Coup. Control of the government of Sudan was seized by Lieutenant General Ibraham Abboud.

1959, November 10. Unsuccessful Coup Attempt.

1964, October–November. Violence Forces Overthrow of Abboud Government. Unable to quell mounting disorders, and faced with a possible military coup, General **Abboud** resigned as president. He was replaced by a council under Premier Sir **el-Khatim el-Khalifa.**

1966, December 28. Unsuccessful Coup Attempt. Loyal army troops subdued insurgents in a training center, after a sharp fight.

1967, June. Sudan Sends Units to Support Egypt in Sinai.

1969, May 25. Coup d'État. The government of Prime Minister **Mohommed Ahmed Mahgoub** was overthrown by a leftist military coup headed by Colonel **Mohommed Gafaar al-Nimeiry.**

1970, March 30–31. Unsuccessful Coup Attempt. In bloody fighting rebel leader Imam **el-Hadi Ahmed el-Mahdi** was killed by troops loyal to President Nimeiry.

1971, July 19–21. Coup and Countercoup. A group of Communist-oriented officers, apparently with covert Soviet support, briefly seized control of the government in a bloodless *coup d'état.* President Nimeiry, however, apparently with support from Egypt and Libya, staged a countercoup and regained power.

1972, March 27. Agreement Ends North-South Civil War. The Arab-Moslem government of northern Sudan reached an accommodation with the black Christians and pagans of the south, ending 17 years of strife.

1973, March 2. Palestinian Terrorists Assassinate American and Belgian Diplomats. The Black September terrorists were convicted of murder (June 1974), but freed by the government and released to the Palestine Liberation Organization (PLO) in Cairo. The U.S. at once recalled its new ambassador.

Tanganyika, Zanzibar, and Tanzania

1961, December 9. Independence of Tanganyika. It remained in the British Commonwealth.

1963, December 10. Independence of Zanzibar. It remained in the British Commonwealth.

1964, January 12. Zanzibar Rebellion. The government was overthrown by African nationalist rebels, some of whom had been trained in Communist China. Nationalist unrest, stirred up by Communists, spread to nearby mainland nations; widespread mutinies resulted.

1964, January 25. British Intervention. At the request of local governments, British troops suppressed mutinies of African troops in Tanganyika, Kenya, and Uganda.

1964, April 26. Establishment of Tanzania. This resulted from the merger of Tanganyika and Zanzibar.

1971, August 24–30. Border Clashes with Uganda. President Amin's pretext for attacks on Tanzanian troops was the accusation that Tanzania was assisting Ugandan rebels (see below).

Uganda

1949–1962. Anticolonial Disorders.

1962, October 9. Independence of Uganda. Freedom was granted by Great Britain to the kingdom, under King **Mutesa II,** Kabaka of Buganda. The new state was initially governed as a dominion, with a loose federal relationship between Uganda proper and the kingdom of Buganda.

1963, October 9. Uganda a Republic. King Mutesa II was elected president (as **Edward Mutesa**) under a new constitution, under which Uganda became a sovereign state within the British Commonwealth. Prime Minister was **Milton Obote,** principal Ugandan politician.

1966, March 3. Obote Deposes President Mutesa. The President fled to Kampala, Buganda, where he was still the Kabaka, and began a separatist movement, demanding withdrawal of Uganda troops by May.

1966, May 23–24. Uganda Suppresses Bugandan Separatist Movement. In 2 days of fighting in Kampala, federal troops seized the Kabaka's palace and restored federal control to Buganda. Mutesa escaped to England. Obote became president.

1971, January 25. Bloody Coup d'État. While Obote was attending a Commonwealth conference in Singapore, a group of officers, headed by Major General **Idi Amin,** seized control of the government and overwhelmed loyal troops. Obote took refuge in Tanzania.

1971, August 24–30. Border Skirmishes with Tanzania. Tense situations between Tanzania and Uganda following Amin's coup resulted in a protracted outburst of hostilities along the border west of Lake Victoria.

Central Africa

Union of Central African States

This loose federation for defense and economic cooperation was established by Zaire (then still known as Congo-Kinshasa), Chad, and the Central African Republic (April 2–3, 1968). It has not played an important role in the policy of its members.

Burundi

1962, July 1. Independence of Burundi. A former German colony and later Belgian mandate and trusteeship, Burundi became an independent monarchy under King **Mwami Mwambutsa,** of the dominant but minority Watusi (Tutsi) tribe. The first years of independence were extremely shaky.

1966, July 8. Coup d'État. Prince **Charles Ndizeye** overthrew his father and proclaimed himself King **Mwami Ntare V.**

1966, November 28. Coup d'État. The new King was overthrown by his appointed Prime Minister, Colonel **Michael Micombero,** who proclaimed himself president. Burundi became a republic.

1970, October 19–20. Unsuccessful Army Mutiny and Coup Attempt. Army officers from the majority, but suppressed, Bahutu (or Hutu) tribe, aided by some Watusi soldiers and police, staged an abortive coup attempt. Bahutu tribesmen revolted and massacred several thousand Watusis. The fierce and bloody Watusi reprisal eliminated all of the Bahutu leaders in and out of the government and army.

1972, April 29–July 31. Civil War and Massacres in Burundi. An effort by Bahutu tribesmen and some Watusi monarchists to free former King Mwami Ntare V failed. Mwami was killed, but armed rebellions spread throughout the country. At least 100,000 people were killed in the first 2 months, largely in reprisal massacres by official and unofficial Watusi organizations. The reprisal killings ended in August, with the government of President Micombero firmly in control.

Central African Republic

1960, August 13. Independence of the Central African Republic. A former French colony, the CAR had been self-governing since 1958. Its President, **David Dacko** established strong ties with Communist China.

1966, January 1. Coup d'Ètat. Military officers, led by Colonel **Jean Bedel Bokassa,** ousted the Dacko government. Bokassa became chief of state and immediately broke relations with Communist China.

1967, November 16. French Troops Support Regime. They were airlifted into the capital, Bangui, to help President Bokassa suppress a threatened uprising.

Republic of Chad

1960, August 11. Independence of Chad. A former French colony, Chad had been autonomous since 1958.

1968–1971. Rebellion of Northern Arabs. This was initiated by a fierce battle in the Tibesti Desert region (March 15 1968). The revolt was suppressed by the central government with the assistance of French troops (see p. 1377). French troops were later withdrawn (June 1971).

1971, August 27. Unsuccessful Coup Attempt. The rebels apparently were supported by Libya. Chad broke diplomatic relations with Libya. Relations were resumed in 1973 when Chad broke relations with Israel.

Malawi

1959–1964. Anti-Colonial Disorders in Nyasaland.

1964, July 6. Independence of Malawi. This was granted by Great Britain to the former self-governing colony of Nyasaland. The new republic joined the British Commonwealth.

Rwanda

1959–1961. Civil War in Belgian Rwanda. Shortly after self-government was granted by Belgium, and following U.N.-supervised elections, the suppressed Bahutu (or Hutu) majority rose in revolt against the minority but dominant Watusi (or Tutsi) tribesmen and seized control after bloody tribal warfare against the giant Watusis.

1962, July 1. Independence of Rwanda. A former German colony and later Belgian mandate and trusteeship, Rwanda became a republic, with the majority Bahutu tribe controlling the country.

Zaire

1949–1960. Widespread Unrest and Disorder in Belgian Congo. Colonial authorities were only partially successful in maintaining order.

1960, June 30. Belgium Grants Independence to the Congo. The first president, **Joseph Kasavubu,** appointed leftist **Patrice Lumumba** as premier. The new republic was unprepared for independence and chaos followed; soldiers and civilians rioted, looted, raped, and murdered. The white population fled the country, taking their expertise with them and adding further to the chaos. Central control disappeared from remote provinces. A few pockets of order were kept by some 10,000 Belgian troops remaining in the Congo, mostly in Katanga, where they were protecting the extensive manufacturing complex created by Belgium to process Katanga's great natural wealth.

1960, July 11. Katanga Proclaims Independence. Moise Tshombe, leader of Katanga, refused Lumumba's demands to submit to central control and to oust Belgian troops; he proclaimed secession of Katanga from the Congo and requested more Belgian military assistance to meet threatened Congo invasion. Lumumba appealed to the U.N. for military assistance in suppressing the Katanga revolt.

1960, July 14. International Crisis. The U.N. Security Council approved establishment of a U.N. security force by Secretary General Dag Hammarskjöld to restore order in the Congo (see p. 1368). The first contingent (from Tunisia) reached Leopoldville the next day, as Khrushchev was threatening military intervention on behalf of Lumumba. Eventual strength of the force was 20,000 men.

1960, July 22. U.N. Demands Belgian Troop Withdrawal. The Belgians complied partially (July 31), save for a few local security detachments and a garrison in Katanga remaining at Tshombe's request.

1960, August 12. Katanga Crisis. Hammarskjöld and 240 Swedish U.N. troops arrived at the Elizabethville airport in Katanga. He repeated earlier demands that all Belgian troops be withdrawn and replaced by U.N. troops. Tshombe refused to permit the U.N. force entry into Elizabethville and threatened to use force if necessary. Erratic Lumumba denounced Hammarskjöld for using white troops, for conniving with Tshombe, and for not placing U.N. forces under his command.

1960, August 24. Revolt in Kasai. Lumumba sent a military force to Kasai to suppress revolt of Buluba chief **Albert Kalonji.** Results were inconclusive.

1960, August 30. Belgium Announces Combat Troop Withdrawal. Hammarskjöld insisted that some still remained on in Katanga.

1960, September 14. Lumumba Overthrown. Colonel **Joseph Mobutu,** Army Chief of Staff, seized virtual control of the government. Kasavubu named **Joseph Ileo** as premier. Lumumba, at first arrested, then fled to east-central Congo.

1960, September 20. U.N. Votes Confidence in Hammarskjöld. Following Soviet representative **Valentin A. Zorin**'s bitter denunciation of Hammarskjöld's policies and action in the Congo, the U.N. overwhelmingly voted its confidence in the Secretary General.

1960, October–November. Widespread Violence and Disorders. These were largely the responsibility of undisciplined Congo troops; there were some clashes with U.N. troops.

1960, December 1. Lumumba Arrested. Government troops seized him and flew him to Leopoldville.

1960, December 14. Stanleyville Revolt. Antoine Gizenga, who had been Lumumba's vice-premier, proclaimed himself premier and established a pro-Communist government in Stanleyville. His adherents began to expand their control over much of east-central Congo.

1961, February 9. Lumumba Murdered. Kasavubu ordered Lumumba transferred to a "more secure" prison in Katanga (January 17). Soon afterward, under circumstances not clear, Lumumba was murdered. Tshombe has been accused, probably correctly, of responsibility.

1961, February 21. Katanga Mobilization. This was ordered by Tshombe in response to U.N. threats to force integration of Katanga with the Congo.

1961, February 24. U.N. Action against Stanleyville Requested. Premier Ileo asked for help after Gizenga forces seized Luluabourg, capital of Kasai province.

1961, March 12. Proclamation of a New Congo Federation. This was a reorganization of the government, proclaimed at a meeting in Tananarive, Malagasy, of President Kasavubu, Premier Ileo, and all regional leaders except Gizenga.

1961, April 17. Congo-U.N. Agreement. This document, signed by Congolese President Joseph Kasavubu, authorized the U.N. to use force if necessary to prevent civil war in the Congo.

1961, April 26–June 2. Tshombe Arrested. Following a "unity" conference in Leopoldville, Tshombe was seized and detained by the Congo government. After promising to bring Katanga into the Congo, he was released by

Mobutu. Tshombe thereupon repudiated his agreements made under duress.

1961, August 1. New Government. The reconvened Congo parliament elected **Cyrille Adoula** as premier; Gizenga was named vice-premier.

1961, August 21. U.N. Action in Katanga. After a gradual force build-up, U.N. troops in Katanga seized communications centers in and around Elizabethville to force Tshombe to dismiss white mercenary officers. Reluctantly, he complied, but began measures for the defense of Elizabethville.

1961, September 13–21. Hostilities in Katanga. U.N. forces, attempting to seize control of Elizabethville, were unsuccessful; they lost face while Tshombe and his army gained prestige. Tragically, Hammarskjöld, flying in to bring about a cease-fire, was killed in a plane crash near Ndola, Northern Rhodesia (September 18).

1961, November. Congolese Invasion of Katanga Repulsed. Congolese forces were repelled by the Katanga Army.

1961, December 18. U.N. Capture of Elizabethville. This led to an agreement between Tshombe and Premier Adoula to restore the unity of the Congo (December 21). Tshombe again failed to comply and retained autonomy.

1962, January. Renewed Stanleyville Revolt. Gizenga again attempted an uprising from Stanleyville, but his troops were defeated by Congo Army troops; he was dismissed from the government by Adoula.

1962, December 29–1963, January 15. U.N. Offensive in Katanga. Operations against Elizabethville were begun in response to Katangese provocations, and with the objective of ending Katanga's secessioin from the Congo. Katanga forces were completely defeated, and Tshombe forced to flee. After accepting the integration of his province with the central government (January 15), he went into exile.

1963–1964. Steady Reduction of U.N. Forces. This was largely because of lack of funds to support them. Unrest and revolt continued throughout the country, particularly in the northeastern region.

1964, June 16. American Civilians Fighting as Mercenaries. The U.S. State Department conceded, after several denials, that "some American civilian pilots under contract with the Congolese Government have flown T-28 sorties in the last few days in the eastern part of the Congo." This was part of the central government's effort to suppress a revolt of Bafulero tribesmen in Kivu Province.

1964, June 30. Last U.N. Troops Leave the Congo.

1964, July 9. Moise Tshombe Named Premier. This was obviously a last desperate effort to achieve stability in the Congo. Returning from exile, he immediately began a campaign of combined conciliation and threat of force with the various rebel groups. He also strengthened the Congo Army by bringing in white mercenary troops and officers to help train it. Further training assistance was given by a U.S. military-aid mission. Tshombe, considered a traitor to Africans (even by many moderate African leaders) because of his history in Katanga and his more recent recruiting of white troops, was bitterly denounced throughout Africa, and particularly in Communist-bloc states.

1964, August 30. Congolese Army Retakes Albertville. This had been in rebel hands for 2 months.

1964, September–October. Rebel Gains in East-Central Congo. The alarming increase in strength was largely due to assistance from Communists, and from the U.A.R., through Sudan and Uganda.

1964, November. Congo Army Prepares Offensive against Stanleyville. The rebels then seized some 2,000 white hostages and threatened massacre if Congolese troops approached the rebel capital.

1964, November 25–27. Belgian-U.S. Intervention. A surprise airborne landing by a Belgian paratroop battalion, flown by U.S. air units from Belgium via Ascension Island, seized Stanleyville and rescued some 1,650 white hostages. Violent outcries from the Communist bloc and from anti-Tshombe Africans led to the overly quick withdrawal of the Belgian troops and American planes. As a result, other

planned rescue missions were abandoned, and several hundred white hostages were brutally massacred.

1965, October 13. Tshombe Ousted from Office. In a power struggle, the Prime Minister was defeated by President Kasavubu.

1965, November 25. Coup d'État. General Mobutu, Commander in Chief of the Army, ousted Kasavubu in a bloodless coup and named himself president. (He later changed his name to Mobutu Sese Seho.)

1966, May 30. Unsuccessful Coup Attempt. Mobutu gained more strength.

1967, June–November. Revolt by Katangese and Foreign Mercenaries. Belgian and French mercenaries attempted to seize control of Katanga and Kivu provinces. Lack of local support, and prompt counteraction by Mobutu, soon resulted in collapse of the revolt. The mercenaries fled the country.

1967, August 9. Rebels Capture Bukava. The capital of Kivu Province was seized by 1,500 Katangese rebels and 160 mercenaries. The rebels failed to receive expected local support and were soon attacked by forces of the central government.

1967, November 5. Rebels Flee to Rwanda; Revolt Collapses. After recapturing Bukava, Congolese troops pursued some 2,000 rebels and mercenaries across the border of neighboring Rwanda.

1968–1974. Stability Returns to the Congo.

1971, October 27. Congo's Name Changed to Republic of Zaire. This was part of the policy of President Mobutu to replace with African names those brought in by colonists in the 19th and 20th centuries.

Zambia

1952–1964. Anticolonial Disorders in Northern Rhodesia.

1964, January 22. Independence of Zambia. This was granted by Britain to the former self-governing protectorate.

1965–1974. Zambia Becomes a Base for Anticolonial Forces. While scrupulously avoiding incidents with Portuguese Angola and Mozambique, and with Rhodesia, Zambia did allow insurgent forces to operate from its territory. The result was strained relations, and some border clashes with Portuguese and white Rhodesian frontier forces.

West Africa

Angola

1961, February 4–7. Antigovernment Riots. These were apparently connected with the *Santa Maria* incident (see p. 1381).

1961–1974. Rebellion against Portugal. The efforts of separatist rebels to throw off Portuguese colonial rule were generally unsuccessful. Portuguese military repression eliminated most of the rival groups from Angolan territory. Raids against the Portuguese continued, however, from insurgent bases in Zaire and Zambia.

1974, October 15. Cease-fire Agreed. After the coup in Portugal (see p. 1381), the new Portuguese government moved rapidly to grant autonomy, and the opportunity for independence, to its African colonies. The problem was complicated by the rivalries of different insurgent groups. Unrest and violence continued, mostly between the rival national groups.

Cameroon

1956–1959. Anticolonial Terrorist Activities.

1960, January 1. Independence of East Cameroon. This former French mandate and trusteeship (the eastern part of the former German colony of Cameroons) had been autonomous for 2 years.

1961, October 1. Establishment of the Federal Republic of Cameroon. Following a referendum, most of West Cameroon, a former British mandate and trusteeship (the western part of the old German colony), joined East Cameroon to form a federal union. (The northern part of West Cameroon voted to join Nigeria.)

1962–1971. Insurgent Rebellion. Communist insurgents, based in Congo (Brazzaville), kept up a low-keyed rebellion against the central government until the capture and execution of their leader (1971).

People's Republic of the Congo

1960, August 15. Independence of Congo (Brazzaville). A former French colony, Congo had for 2 years been autonomous. Taking the name of Republic of Congo, the new nation was generally referred to as Congo (Brazzaville), to distinguish it from the Democratic Republic of Congo, known as Congo (Kinshasa). This need to distinguish the two Congos by means of their capitals became unnecessary when Congo (Kinshasa) changed its name to Zaire (see p. 1443).

1963, August 15. Coup d'État. The government of President **Fulbert Youlou** was overthrown by a trade-union coup (see also p. 1377). The new President, **Alphonse Massamba-Debat,** established close relations with Communist China.

1966, June 28–29. Coup d'État.

1968, September 4. Coup d'État. Military officers led by Major **Marien Ngoubai** ousted the former government, after fierce fighting between the Army and Cuban-trained militants. Ngoubai soon became president (January 1 1969). The pro-Peking orientation was not changed. The following year the name of the state was changed to People's Republic of the Congo (January 1970).

Dahomey

1960, August 1. Independence of Dahomey. Self-governing since 1958, Dahomey was granted independence by France.

1963, October 28. Coup d'État. The government of President **Hubert Maga** was overthrown by a group of officers under General **Christophe Soglo,** who installed a civilian government.

1965, December 22. Coup d'État. Again General Soglo led a military coup. This time he retained power as president.

1967, December 17. Coup d'État. A military junta under Major **Maurice Kouandete** overthrew President Soglo.

1969, July 12. Unsuccessful Coup Attempt.

1969, October 21. Unsuccessful Coup Attempt.

1969, December 10. Coup d'État. In the sixth coup or coup attempt since independence, the Army overthrew the government of President **Emile D. Zinsou.**

1972, October 26. Coup d'État. Major **Mattneu Kerekou** became president.

Gabon Republic

1960, August 17. Independence of Gabon. Granted by France, the former colonial power.

1964, February 17–18. Unsuccessful Coup Attempt. The government of President **Leon Mba** was briefly overthrown by the Army, but was restored the next day when French troops flew in and routed the revolutionaries.

The Gambia

1965, February 18. Independence of The Gambia. Granted by Britain. The Gambia changed its government from dominion status to a republic within the Commonwealth (April 1970).

Ghana

1948–1956. Anticolonial Disorders.

1957, March 6. Independence of Ghana. Initially with dominion status, Ghana became a republic within the Commonwealth, with **Kwame Nkrumah** as president (July 1 1960).

1966, February 24. Coup d'État. The armed forces seized power during the absence of Nkrumah on a visit to Communist China. Leader of the revolt was Lieutenant Colonel (soon General) **Joseph Ankrah.**

1966, March–April. Invasion Threat from Guinea. President **Sekou Toure** of Guinea, after welcoming Nkrumah (March 10), threatened to use force to restore his old friend to power. He backed down in the face of mobilization by Ghana and Ivory Coast.

1972, January 13. Coup d'État. Prime Minister **Kafi A. Busia** was deposed by army officers while he was in London for medical treatment. The military men, under Colonel **Ignatius Kutu Acheampong,** suppressed a countercoup (January 15).

Guinea

1958, October 2. Independence of Guinea. Under the leadership of Prime Minister Sekou Toure, Guinea refused to participate in a French plan for gradual independence of its former African colonies, and proclaimed independence. Toure became president.

1966, March–April. Threat of War with Ivory Coast and Ghana. (See above.)

1970, November 22–24. Portuguese-Supported Invasion Attempt. Dissident Guineans, with some Portuguese support, attempted a seaborne invasion but were repulsed. The Portuguese support was in retaliation for Toure's support of rebels in Portuguese Guinea. Portugal was censured by the United Nations.

Guinea-Bissau

1962–1974. Rebellion against Portugal. Rebels in Portuguese Guinea were the most successful of the African nationalists opposing Portuguese rule. By the time of the coup in Portugal (see p. 1381), the rebel organization—African Independence Party of Guinea and Cape Verde (PAIGC)—held at least 50 percent of the countryside.

1974, July 27. Independence of Guinea-Bissau. Portuguese Guinea was the first of Portugal's dissident African colonies to receive independence.

Ivory Coast

1950–1960. Sporadic Anticolonial Disorders.

1960, August 7. Independence of the Ivory Coast. Granted independence by France after a 2-year period of autonomy, under the leadership of President **Felix Houphouet-Boigny.**

1966, March–April. Threat of War with Guinea. When President Sekou Toure of Guinea threatened to invade Ghana, to reinstate Nkrumah as president (see above), he planned to march through the Ivory Coast. President Houphouet-Boigny refused passage and mobilized his army. Toure backed down.

Liberia

1963, February 5. Unsuccessful Coup Attempt.

Mali (Sudanese Republic)

1959, January 17. The Mali Federation Established. The Sudanese Republic, former French Sudan, elected in 1958 to accept French assistance in reaching independence through progressive autonomy. The region joined with Senegal to establish a new federation.

1960, June 20. Independence of the Sudanese Republic. Despite increasing internal strains, the federation with Senegal continued.

1960, August 20. The Sudanese Republic Withdraws from Federation with Senegal. The new state officially adopted the name Republic of Mali (September 22).

1968, November 19. Coup d'État. The socialist government of President **Mobido Keita** was overthrown by a military group under Lieutenant **Moussa Traore,** who became president (December 6).

1971, April 7. Unsuccessful Coup Attempt.

Mauritania

1957, February 15. Unsuccessful Efforts to Annex Mauritania to Morocco. A so-called

Moroccan Army of Liberation, based in Morocco, although disavowed by the Moroccan government, raided into Mauritania in an unsuccessful attempt to incite rebellion and to join Mauritania to Morocco, which claims sovereignty. The effort was suppressed by French troops.

1960, November 28. Independence of Mauritania. Granted by France.

1962, April 1. Rebel Invasion Attempt from Morocco. The rebels were driven out, again preventing efforts to reunite Morocco and Mauritania.

Niger

1960, August 3. Independence of Niger. Granted by France.

1961–1974. Endemic Unrest. This was exacerbated by famine in the early 1970s.

Nigeria

1960, October 1. Independence of Nigeria. It became a republic within the British Commonwealth. Internal tensions soon appeared, based largely on regional tribal allegiance and jealousies.

1966, January 16. Coup d'État. The government of Prime Minister Sir **Abudakar Tafawa Balewa** was overthrown by dissident army officers. Balewa was killed. Following a power struggle among the officers, the army commander, General **Johnson Aguyi-Ironsi,** took control and established a provisional federal military government.

1966, July 29. Coup d'État. A group of mutinous army officers, mostly from the northern Hausa tribe, kidnapped the Chief of State, General Aguyi-Ironsi, and killed him. During another confused power struggle among officers with regional ties, a group of northern officers led by Colonel **Yakubu Gowon** seized control. Bloodshed continued in the country, with most of the victims members of the industrious southeastern Ibo tribe, predominantly Christians, who had achieved coveted positions in government or commerce in other regions. Most of the Ibo survivors moved from the Moslem northern regions back to their own area.

1967, May 30. Secession of Biafra from Nigeria. Southeastern Nigeria, inhabited mostly by Ibos and rich in agricultural and mineral resources, primarily petroleum, declared independence from Nigeria, under the leadership of Army Lieutenant Colonel **Chukwuemeka Odumegwu Ojukwu,** who became president of the Republic of Biafra.

CIVIL WAR

1967, June 7–1970, January 12. Nigeria-Biafra Civil War. Colonel Gowon's federal government refused to accept the secession of Biafra and moved to subdue the rebellious region by force. Initial efforts of federal troops—about 12,000 strong—to move into Biafra were repulsed. Biafran forces, hastily recruited, invaded the mid-western region and captured the capital, **Benia** (August 9 1967).

1967, September–1968, May. Federal Invasion of Biafra. With substantial superiority in numbers and quality of equipment, the expanded military forces of the federal government slowly occupied almost half of Biafra, but were halted on a defensive line protecting the Biafran capital of Umuahia. Tentative peace negotiations in London (May) and Kampala (June) were fruitless.

1968, September. Renewed Nigerian Offensive. Federal troops captured **Aba** (September 4) and **Owerri** (September 16). Again the Biafran defenses stiffened and halted the invading forces. Biafra had lost direct access to the sea but maintained contact with the outside world through a tenuous airlift to Fernando Po, a Spanish colony.

1969, February–March. Biafran Counteroffensive. In a surprise counteroffensive, Biafran troops pushed southward in an effort to reopen a seaport. They reached the outskirts of Aba before being halted (March 3). A stalemate followed, during which Nigerian aircraft repeatedly bombed Biafran military targets and civilian centers.

1969, June–December. Final Nigerian Offensive. In a slow but steady offensive, the enlarged, well-equipped Nigerian Army—now about 180,000 strong—overwhelmed the desperate Biafran defense.

1970, January 12. Surrender of Biafra. The last organized defense collapsed. Colonel Ojukwa fled by air to seek refuge in the Ivory Coast. The population of Biafra, which had been about 12 million at the start of the revolt, had suffered approximately 2 million dead (many of these children), mostly from starvation. The region, which had been one of the best-developed in Africa before the war, was devastated.

Senegal

1959, January 17. Senegal and Sudan Form the Mali Federation. These colonial regions, which had been granted autonomy by France in 1958, joined to form a federated republic.

1960, June 20. Independence of Senegal Granted by France. The federal union with the Sudanese Republic continued.

1960, June 20. Collapse of the Mali Federation. The Sudanese Republic adopted the name of Mali (see p. 1445); Senegal continued an independent status.

1962, December 17. Unsuccessful Coup Attempt.

Sierra Leone

1955–1960. Anticolonial Disturbances.

1961, April 27. Independence of Sierra Leone. It assumed dominion status within the British Commonwealth.

1967, March 23. Coup d'État. A military junta seized power without bloodshed, under the leadership of Majors **Charles Blake** and **Andrew T. Juxon-Smith.**

1968, January 25. Coup d'État. Military insurgents seized power.

1968, April 18. Coup d'État. A group of noncommissioned officers overthrew the government of Colonel **Juxon-Smith.** They called back from exile Colonel **John Bangura** to head a new junta, which installed **Siaka Stevens** as Prime Minister.

1968, November 21–25. Violence Suppressed by Government.

1970, October 5. Unsuccessful Coup Attempt.

1971, January 21. Unsuccessful Coup Attempt.

1971, April 19. Sierra Leone Becomes a Republic. Prime Minister Stevens became president. The nation remained in the Commonwealth.

Togo

1960, April 27. Independence of Togo. Granted by France, following 2 years of autonomy.

1963, January 13. Coup d'État. A military junta of noncommissioned officers seized power after killing President **Sylvanus Olympio.**

1967, January 13. Coup d'État. The government of President **Nicholas Grunitzky** was overthrown without bloodshed by Army Chief of Staff Lieutenant Colonel **Etienne Eyadema.**

1970, August 8. Unsuccessful Coup Attempt.

Upper Volta

1960, August 5. Independence of Upper Volta. Granted by France, following 2 years of autonomy.

1966, January 3. Coup d'État. Army Chief of Staff Lieutenant Colonel **Sangoule Lamizana** bloodlessly overthrew the government of President **Maurice Yameogo.** Lamizana proclaimed himself chief of state.

Southern Africa

Botswana

1966, September 30. Independence of Botswana. The former British colony of Bechuanaland remained in the Commonwealth.

Lesotho

1966, October 4, Independence of Lesotho. The former British protectorate of Basutoland, completely surrounded by the Union of South Africa, remained in the Commonwealth.

1970, January 30. Coup d'Etat. In a bloodless and apparently reasonably amicable action, the Prime Minister, Chief **Jonathan,** placed King **Moshoeshoe II** in house arrest and seized power. The King left the country for 6 months, returned, took an oath not to get involved in politics, and was returned to the throne.

Mozambique

1962–1974. Rebellion against Portugal. A number of minor separatist movements united under the Frente de Liberatacao de Mocambique (FRELIMO), which established its headquarters in Dar es Salaam. Although other rival groups were organized, FRELIMO carried most of the burden of sporadic guerrilla war against the Portuguese Army and was able to establish control in a number of regions of the country, operating mainly from bases in Tanzania and (to a lesser extent) Zambia.

1974, September 7. Independence from Portugal Agreed. After the coup in Portugal (see p. 1381), the new Portuguese government moved promptly to grant independence to its African colonies. By agreement signed by Portuguese and FRELIMO representatives in Lusaka, Zambia, a cease-fire was initiated. Formal independence followed (June 25, 1975).

Rhodesia

1960, July–October. Rioting in Southern Rhodesia.

1965, November 11. Unilateral Declaration of Independence. The white population (270,000) of the British colony of Southern Rhodesia, fearful of British policies that seemed directed toward placing political power in the hands of the majority black population (5,400,000), declared independence from Great Britain, under Prime Minister **Ian D. Smith.** Economic sanctions were announced by Great Britain, the U.S., and most African nations.

1968, May 9. United Nations Security Council Orders Trade Embargo on Rhodesia. This action was taken after the failure of repeated British peaceful efforts to get Rhodesia to grant political rights to the black population.

1970, March 2. Rhodesia Proclaims Itself a Republic.

1971–1974. Low-Level Insurgency. Although no immediately serious threat to the stability of the Rhodesian government, incursions of black insurgents, based in neighboring countries, particularly Zambia, aroused fears and tension in the white population.

Republic of South Africa

1949–1962. Sporadic Race Riots. Of these the most significant were at Durban (January 1949; June 1959; January 1960), Kimberley (November 1952), and Sharpeville (March 1960). They were suppressed ruthlessly by government police and troops.

1949, July 13. The United Nations Defied. The Union of South Africa rejected a U.N. Trusteeship Council demand that Southwest Africa become part of the trusteeships system.

1950–1953. Korean War. South Africa provided an air unit to the U.N. command.

1960, March 21. Sharpeville Race Riot. Police opened fire on a crowd of 20,000 blacks attacking a police station; 56 were killed, 162 wounded. Other riots, breaking out throughout the country, were quickly suppressed. There was a wave of international revulsion against South Africa and its racial policy of *apartheid* (apartness).

1961, May 31. South Africa Becomes a Republic. The new republic withdrew from the British Commonwealth.

1966, October 27. United Nations Resolves and End to South African Mandate over South West Africa. This was a League of Nations mandate, after World War I, over the for-

mer German colony. South Africa refused to recognize the authority of the U.N. to interfere with its authority over the territory.

1970, July 23. United Nations Security Council Arms Embargo. This was in response to repeated South African defiance of the authority of the U.N. over South West Africa.

1974, November 25. U.N. General Assembly Votes to Suspend South Africa from Membership.

NORTH AMERICA

United States

1945, September 14. Pearl Harbor Investigation. A Joint Congressional Committee was appointed to investigate the Pearl Harbor disaster. The investigation opened 2 months later (November 15), and submitted an inconclusive report (July 20, 1946).

1945, December 19–1947, July 26. Military Unification Controversy. President Truman sent a special message to Congress outlining a program of unification for the Army and the Navy and the establishment of the new Air Force in a single Department of Defense. Senior naval officers testifying before the Senate Military Affairs Committee had already expressed vehement opposition to the unification concept. Despite this opposition, President Truman later submitted to Congress a specific plan for the merger of the Army and Navy and a new Air Force in a Department of National Defense (June 15, 1946).

1945–1947. The Marshall Mission to China.

1946, January–March. Crisis in Iran. **(See p. 1402.)**

1946, March 5. Churchill Speech at Fulton, Mo. In an address at Westminster College, Churchill advocated a fraternal association between the U.S. and Great Britain to deter Soviet aggression. He coined the expression "Iron Curtain."

1946, April 4. Horse Cavalry Abolished. Remaining cavalry units and individuals were merged with armored forces; cavalry disappeared as a separate service.

1946, July 1–25. Bikini Nuclear Tests. First peacetime weapons tests in history were carried out at Bikini Atoll in the Marshall Islands in the Pacific.

1946, December 16. Establishment of Unified Overseas Commands. This was ordered by President Truman on the advice of the Joint Chiefs of Staff.

1947, January 1. Civilian Control of Nuclear Affairs. The U.S. Atomic Energy Commission formally took command of all U.S. atomic-energy affairs.

1947, January 7. General Marshall Appointed Secretary of State. The State Department made public his report on his mission to China, in which he criticized both reactionaries in the Nanking government and the Chinese Communists.

1947, March 12. Truman Doctrine. This proposed economic and military aid to nations threatened by Communist aggression. Specifically, President Truman asked Congress for $400 million to give economic and political aid to Greece and Turkey, both seriously threatened by the possibility of Soviet aggression and both further endangered by Britain's recent decision to withdraw forces from Greece. This was approved by Congress (May 15) and signed by the President (May 22).

1947, March 31. The Selective Service Act Expired.

1947, June 5. Marshall Plan. In a speech at Harvard, Secretary of State Marshall suggested American economic assistance to help Europe recover and to gain the strength necessary to avoid internal subversion and external aggression.

1947, June 5. Satellite Peace Treaties. The Senate ratified peace treaties with Italy, Hungary, Rumania, and Bulgaria.

1947, July 26. The National Security Act of

1947. This was based upon the unification plan submitted a year earlier by President Truman. Three armed services were unified within a National Military Establishment. Secretary of the Navy **James Forrestal** was appointed the first Secretary of Defense.

1947, September 26. Establishment of the U.S. Air Force. Pursuant to the Act of July 26 (see above).

1948, March 27. Key West Agreement. Publication of an agreement between the 3 armed services to resolve disputes regarding their respective roles and missions in the national defense of the U.S.

1948, April 3. Marshall Plan in Operation. President Truman signed the first foreign-aid bill for $6.98 billion.

1948, June–1949, May. Berlin Blockade. **(See p. 1378.)**

1948, June 11. Vandenberg Resolution. A resolution sponsored by Senator **Arthur H. Vandenberg** proclaimed U.S. policy to give military aid to defensive alliances among the free nations of the world.

1948, June 19. New Selective Service Act. Conscription was reinstated by Congress.

1948, August 23. Newport Agreement; New Roles and Missions. At a meeting at Newport, R.I., Secretary of Defense Forrestal and the Joint Chiefs of Staff agreed on further revision of the roles and missions of the armed forces.

1949, April 23. Construction Stopped on Supercarrier. Secretary of Defense Johnson ordered abandonment of construction on the 65,000-ton USS *United States*.

1949, June 3–August 25. B-36 Controversy. This began with accusations and rumors in the press (by Navy adherents in an interservice controversy) that the B-36 bomber had been chosen as the principal Air Force weapon for personal and political reasons. Secretary of Defense **Louis Johnson** and Secretary of the Air Force **Stuart Symington** were anonymously accused of having personal-gain motives in the decision. After a 2-month investigation, the House Armed Services Committee cleared top-ranking government officials and Air Force officers of "charges and insinuations that collusion, fraud, corruption, influence, or favoritism played any part whatsoever in the procurement of the B-36 bomber."

1949, July 21. North Atlantic Treaty Ratified. This was signed by President Truman (July 25) after Senate ratification. The treaty went into effect after ratification by all 12 signatories (August 24).

1949, August 2. Military Reorganization. Congress approved military recommendations suggested by the Hoover Committee and by Secretary of Defense Forrestal (December 1948). The National Military Establishment was renamed the Department of Defense with increased powers for the Secretary of Defense. The Departments of Army, Navy, and Air Force were reduced from cabinet to departmental rank, and a Chairman was provided for the Joint Chiefs of Staff.

1949, August 5. State Department White Paper on China. **(See p. 1427.)** Secretary of State **Dean Acheson** blamed Generalissimo Chiang Kāi-shek for the defeats of the National Government. Dr. **Wellington Koo,** Chinese Ambassador to the U.S., acknowledged that China might have made some errors, but insisted that mistakes were not confined to his country (August 7).

1949, October 3–27. "Revolt of the Admirals." This was a continuation of the B-36 controversy. Senior Navy officers publicly and privately charged that the Army and Air Force were trying to destroy naval aviation in order to reduce Navy influence in the military establishment. The Chief of Naval Operations, Admiral **Louis Denfeld,** and Admiral **Arthur Radford,** Commander in Chief of the Pacific Fleet, wrote strong letters criticizing unification of the armed forces. In a subsequent Navy Department investigation, it was ascertained that the instigator of this controversy was Captain **John G. Crommelin,** U.S.N. During a House Armed Services Committee investigation, Admiral Radford attacked the B-36 and the concept of nuclear war as advocated by the Air Force. In subsequent testimony before the House Armed Services Committee, Admiral

Denfeld accused the other services of not accepting the Navy "in full partnership." General **Clifton B. Cates,** Commandant of the Marine Corps, personally attacked Secretary of Defense Johnson and the Chiefs of Staff of the Army and Air Force (October 16). Army Chief of Staff General **Omar Bradley,** in testifying before the committee, declared that the Navy admirals were "fancy Dans" "in open rebellion" against civilian authority. Following an investigation, Navy Secretary **Francis P. Matthews** recommended that Truman relieve Admiral Denfeld as Chief of Naval Operations; this effectively ended the revolt (October 27).

1949, October 29. Controversy on Air Force Build-up. President Truman impounded more than $600 million earmarked by Congress for a 58-group Air Force; he instructed Secretary of Defense Johnson not to build more than 48 groups.

1949, December 7. Secretary of Defense Johnson "Cuts Fat." He announced that by more efficient operation the 1949–1950 budget of $15.7 billion had been cut to $13.0 billion for 1950 without reducing preparedness. Most military men believed preparedness was dangerously impaired, an opinion seemingly corroborated by early results in Korea (see p. 1356).

1950, January 5. Truman Announces Continued Economic Aid to Nationalist China. No more military assistance was contemplated.

1950, May 5. Enactment of Uniform Code of Military Justice.

1950, June 25. Korean War Begins. (See p. 1354.)

1950, June 30. Partial Mobilization; Selective Service Extended. President Truman signed a bill extending the Selective Service Act until July 9, 1951. The measure also authorized the President to call the National Guard and Organized Reserves for 21 months of active service.

1950, September 18. Congress Approves General Marshall as Secretary of Defense. Legislation was necessary, since he had recently been a Regular Army officer.

1950, December 8. Truman Confers with British Prime Minister Attlee. Attlee had come to Washington to convey British hopes that the atomic bomb would not be used first by the United States in the Korean War. President Truman stated that he hoped that world conditions would never call for the use of the atomic bomb. They agreed to support the U.N. in attempts to achieve a free and independent Korea.

1950, December 16. Truman Proclaims State of National Emergency. This was to facilitate prosecution of the war in Korea.

1951, May 1. Publication of Wedemeyer Report. This controversial report on China and Korea had been submitted to President Truman, on September 9, 1947, by retiring General Albert C. Wedemeyer. It had been partially described in the State Department's White Paper on China (August 5, 1949).

1951, May–June. Senate Investigates Relief of General MacArthur. (See p. 1361.)

1951, September 1. Security Treaty with Australia and New Zealand (ANZUS Pact).

1952, March 4. Universal Military Training. The House of Representatives defeated a proposal for universal military training, based upon recommendations of an advisory commission to President Truman (June 1, 1947) and of former Army Chief of Staff Eisenhower (February 15, 1948).

1952, July 13. Military Aid to Yugoslavia Approved. (See also p. 1387.)

1952, August 4. ANZUS Pact. The U.S., Australia, and New Zealand established a Pacific Council. At the first meeting in Washington, the ANZUS Council pledged to guard against the threat of communism and maintain peace in the Pacific (September 9–10, 1953).

1952, November. First Hydrogen Weapon. The U.S. exploded a thermonuclear weapon at Eniwetok. President Truman had broken an AEC controversy earlier by ordering the development (January 31, 1950).

1953, April 3. Military Reorganization Plan. President Eisenhower proposed to give civilian officials in the Defense Department more

control. The plan was approved by Congress (June 27).

1953, December 19. Emphasis on Air Power. President Eisenhower and the National Security Council supported plans for the Department of Defense to emphasize air power and continental defenses by increasing Air Force strength and budget, decreasing the Navy and Marine Corps by 15 percent, and decreasing the Army by one-third. The next budget request (January 21, 1954) provided for an Army budget of $10.198 billion, Navy $10.493 billion, and Air Force $16.209 billion. Later General Ridgway, in a magazine article, denied President Eisenhower's statement that the JCS had approved Army cuts (January 1956).

1954, March 8. President Eisenhower's Report on the Mutual Security Act. The U.S. had shipped $7.7 billion of arms and other military equipment to allies since October 1949, and about $3.8 billion in 1953. Almost $6 billion had gone to Western European nations alone, who themselves had spent over $35 billion to build up NATO defenses, of which $11.5 billion had been spent in 1953. Since 1949, military aid to Greece and Turkey totaled $761 million; Far East aid totaled $1.18 billion.

1954, March 16. Presidential Authority under NATO and Rio Treaties. Secretary of State John Foster Dulles said the President had authority to order instant retaliation without consulting Congress in the event of an attack against the U.S., its western European allies, or the Western Hemisphere.

1954, May 7. U.S. Rejects Russian Application to NATO. Britain and France had been consulted prior to the rejection.

1954, September 30. First Atomic-Powered Submarine. The USS *Nautilus* was commissioned.

1955, January 12. "Massive Retaliation" Concept. Secretary of State Dulles announced that the President and the National Security Council had taken a basic decision "to depend primarily upon a great capacity to retaliate instantly [against aggression anywhere] by means and at places of our choosing."

1955, January 17. Defense Budget Controversy. The national defense budget of $34 billion included $15.6 billion for the Air Force, $9.7 billion for the Navy, and $8.85 billion for the Army. General Matthew B. Ridgway, Army Chief of Staff, subsequently testified before the House Armed Services Committee that this budget, and planned cuts in Army armed forces, jeopardized the safety and security of the U.S.

1955, July 11. Opening of U.S. Air Force Academy. Temporarily at Lowry Air Force Base, Denver, Col., it was permanently located at Colorado Springs (September 1958).

1956, May 18. Outbreak of "Colonels' Revolt." Newspaper publication of "leaked" Army and Air Force staff papers revealed bitter interservice rivalry, with Army jealousy and suspicion of the Air Force particularly outspoken in a paper challenging Air Force doctrine that national security lay mainly in air power. Newspapermen, remembering the "Revolt of the Admirals" (see p. 1450), noted that the Army papers had been prepared by a small staff group composed primarily of colonels. Secretary of Defense **Charles E. Wilson** called a special press conference of the Joint Chiefs of Staff to try to demonstrate interservice solidarity (May 21). The Army officers involved were reprimanded and ordered away from the Pentagon.

1956, October 28. Eisenhower Warns Israel. He warned against taking any "forceful initiative in the Middle East." When Israel attacked Egypt the following day (see p. 1341) and Britain and France subsequently became involved at Suez (see p. 1342), Eisenhower forcefully opposed their "aggressions" directly and in the U.N.

1956, November 26. Army Roles and Missions Curtailed. Secretary Wilson gave the Air Force control of all missiles with a range of more than 200 miles. He also severely restricted the Army's planned aviation program.

1956, February 12. Army Opposes Force Levels. Chief of Staff General M. D. Taylor said that 19 authorized divisions were inadequate; 27 or 28 were required to back up U.S. international commitments.

1957, March 9. "Eisenhower Doctrine." The President signed bills authorizing him to use armed forces in Middle East if necessary.

1956, December. End of an Era. The Army announced deactivation of the last mule unit (December 1) and the end of carrier pigeons in the Signal Corps (December 4).

1957, September 24–25. Eisenhower Sends Troops to Little Rock. This ended local defiance of court-ordered school integration.

1958, January 31. First U.S. Satellite. Designed and developed by the U.S. Army, this was "Explorer I." Later, after several more successful launchings, the Army Ballistic Missile Agency was transferred to the newly created National Aeronautics and Space Administration, taking the Army out of space exploration (October 21, 1959).

1958, March 8. Deactivation of Last U.S. Battleship. This was the USS *Wisconsin*.

1958, May 12. NORAD Established. Formal establishment of the Joint Canadian-U.S. North American Air Defense Command confirmed measures already initiated through informal agreement of the two governments (October 1957). NORAD Headquarters was established at Colorado Springs.

1958, May 20. Strategic Army Corps Established. The Pentagon announced that 4 combat-ready divisions, comprising (with supporting troops) 150,000 men, were being combined into a force capable of action at short notice "to meet or reinforce any initial emergency requirements throughout the world."

1958, July 15. U.S. Intervention in Lebanon.

1958, August 6. Department of Defense Reorganization Act. This was the result of a plan submitted to Congress by President Eisenhower (April 16), to (1) stop "unworthy and sometimes costly [interservice] bickering"; (2) assure "clear-cut civilian responsibility, unified strategic planning and direction and completely unified commands"; (3) stop "inefficiency and needless duplication"; and (4) assure "safety and solvency." The Act (a) substantially strengthened the position and authority of the Secretary of Defense in relation to the service departments; (b) authorized a limited general staff type organization for the Joint Staff, capable of more efficient and more comprehensive service to the Joint Chiefs of Staff; and (c) removed service elements in unified commands from the command jurisdiction of the service secretaries and chiefs of staff.

1959, March 3. Warning of Submarine Menace. Admiral **Arleigh A. Burke,** Chief of Naval Operations, warned of the ever-present danger to U.S. warships and commercial shipping posed by Soviet submarines in international waters.

1959, December 10. Withdrawal of U.S. Troops from Iceland.

1959, December 30. First Operational Polaris Nuclear Submarine. USS *George Washington* was commissioned.

1960, January 19. No Missile Gap. Defense Secretary **Thomas S. Gates** told the Senate Armed Services Committee that previously announced Pentagon estimates of a "missile gap," or "deterrent gap," were based on evaluation of Soviet production potentiality, rather than actual Soviet production. He later (March 16) told the Senate Preparedness Subcommittee that the U.S. had, and would maintain, a nuclear destructive power "several times" greater than that of the U.S.S.R.

1960, May 1. U-2 Reconnaissance Plane Shot Down over Russia. Khrushchev made the announcement to the Supreme Soviet that the plane had been shot down from an altitude of 65,000 feet near Sverdlovsk.

1960, May 10. First Submerged Circumnavigation of the Earth. U.S. nuclear-powered submarine *Triton* went 41,519 miles in 84 days.

1960, May 17. Summit Conference Collapses in Paris. Khrushchev, angrily denouncing American spying by the U-2 plane over Russia, broke up the meeting. President Eisenhower later reported on TV to the people on the U-2 incident and the failure of the summit conference (May 25).

1960, June 13. Soviet Spy Net. Senator **J. William Fulbright** made public a U.S. State Department report that the Soviet bloc

maintained a network of 300,000 spies throughout the world.

1960, July 14. U.S. Reaffirms Monroe Doctrine. A response to Khrushchev's threats to retaliate with missiles if the U.S. should intervene militarily in Cuba.

1960, July 20. First Successful Polaris Firing. This was from the submerged nuclear submarine USS *George Washington.*

1960, September 24. Launching of USS *Enterprise.* This was the largest ship ever built and the world's first nuclear-powered aircraft carrier.

1960, November 1. Nuclear Submarine Base Agreement with United Kingdom.

1960, November 14. First Polaris Patrol Mission. The USS *George Washington,* armed with 16 thermonuclear Polaris misiles, sailed from Charleston, S.C.

1961, January. Kennedy Reappraises U.S. Defense Posture. In his first State of the Union Message, he said that he had ordered an appraisal of U.S. strategy, and had directed action to increase U.S. airlift capacity, to step up the Polaris submarine program, and to accelerate the missile program. Shortly thereafter, in a revised budget (March 28), President Kennedy requested $1.954 billion more in defense appropriations than the $41.84-billion budget submitted by Eisenhower.

1961, April 15–20. Bay of Pigs Incident in Cuba. (See p. 1460.)

1961, May 5. First U.S. Manned Space Flight. This was a suborbital flight made by Navy Commander **Alan B. Shepard, Jr.,** launched from Cape Canaveral, Fla., and landed safely in the Atlantic after reaching an altitude of 116.5 miles.

1961, June 3–4. Kennedy-Khrushchev Meeting at Vienna. No agreement was reached, and Kennedy left the meeting apparently with grave doubts as to a peaceful future.

1961, July 10. Berlin Crisis. (See p. 1379.) The United States rejected a Soviet proposal that the U.S., Britain, and France withdraw their forces from West Berlin, to be replaced by a smaller U.N.-supervised force.

1961, September 26. Establishment of the Arms Control and Disarmament Agency.

1962, January 3. Army Increase. President Kennedy announced an increase from 14 to 16 divisions. The Army soon thereafter (February 23) announced an increase in the size of the Strategic Army Corps from 3 to 8 divisions, and its strength had gone from 90,000 to 160,000 men in 6 months since the beginning of the Berlin crisis.

1962, May 6. First Polaris Nuclear Warhead Test. The missile was fired from the nuclear submarine USS *Ethan Allen* and exploded in the Christmas Island testing area.

Cuban Missile Crisis, September–November 1962

1962, September 4. Soviet Military Aid to Cuba. President Kennedy announced that Cuba's military strength had been increased by deliveries of Soviet equipment, but that there was no evidence of significant offensive capability in Cuba. A few days later, despite prodding from members of Congress (particularly Senator **Kenneth Keating**), President Kennedy said that he opposed any invasion of Cuba (September 12). Next day he warned the U.S.S.R. and Cuba against any build-up of offensive strength.

1962, October 22. Crisis Begins. President Kennedy announced to the nation on TV that U.S. surveillance had "established the fact that a series of offensive missile sites is now in preparation" in Cuba that could menace most of the major cities of the Western Hemisphere, and that jet bombers capable of carrying nuclear weapons were being uncrated. He said he had ordered a naval and air quarantine of Cuba that would not be lifted until all offensive weapons were dismantled and removed from Cuba under U.N. supervision. He declared that the launching of any nuclear missile from Cuba against any Western Hemisphere nation would be considered an attack on the U.S. "requiring a full retaliatory response upon the Soviet Union." U.S. forces were placed on alert, and preparations were begun to invade Cuba if necessary.

1962, October 23. Action in U.N. and OAS. A

U.S. demand for dismantling of the bases was lodged in the U.N. Security Council. The Council of the Organization of American States approved a resolution authorizing the use of force to carry out the quarantine.

1962, October 23. Soviet Alert. Alerting its armed forces, the Soviet government challenged the U.S. right to quarantine its shipments to Cuba. U.S. invasion preparations continued.

1962, October 24–29. Secret U.S.-Soviet Negotiations. Prime Minister Khrushchev backed down after an exchange of letters with President Kennedy. He agreed to halt construction of bases in Cuba, to dismantle and remove Soviet missiles there under U.N. supervision. In turn Kennedy agreed to lift the quarantine when the U.N. had taken the necessary measures, and pledged that the U.S. would not invade Cuba, and would withdraw its missiles from Turkey (a step ordered before the crisis, but not publicized).

1962, November 2. Quarantine Lifted. President Kennedy reported to the nation that the Soviet missile bases were being dismantled, and "progress is now being made for the restoration of peace in the Caribbean." The U.S. Defense Department later announced that the U.S.S.R. had begun withdrawal of its jet bombers from Cuba, as pledged by Khrushchev (December 3). In response to congressional criticism, Secretary of Defense **Robert S. McNamara** proved by photographs that offensive weapons had been fully removed from Cuba (February 6 1963). The U.S. and U.S.S.R. later reported to U.N. Secretary General Thant that the crisis was ended (January 7 1963).

1962, December 19. Missile Inventory. The Air Force announced that the U.S. had 200 operational ICBM's: 126 Atlas, 54 Titan, and 20 solid-fuel Minuteman.

1963, May 9. Russians Remain in Cuba. The Defense Department estimated that 17,500 Russians were still in Cuba, including 5,000 combat troops.

1963, August 30. Opening of the "Hot Line." Direct communications were provided between White House and Kremlin.

1963, October 22–24. Operation Big Lift. Fifteen thousand men in a U.S. division were airlifted 5,600 miles in 63 hours and 20 minutes from the U.S. to West Germany.

1964, February 6. Cuba Cuts off Supply of Water to Guantánamo Base. A U.S. distillation plant made the base self-sufficient.

1964, August 7. Gulf of Tonkin Resolution. **(See p. 1415.)**

1964, September 17. Announcement of Perfection of U.S. Antimissile Defense Systems. President Johnson also announced that U.S. weapons could intercept and destroy hostile armed satellites in orbit. Secretary of Defense McNamara described 2 rocket systems: the Army's 3-stage solid-fueled "Nike Zeus" and the Air Force's liquid-fueled "Thor."

1964, December 12. Defense Secretary McNamara Proposes to Combine Army Reserve and National Guard. After violent public and Congressional protest the plan was dropped.

1965, February 7–1973, January 23. Vietnam War, **(See p. 1321.)**

1965, April 28. U.S. Intervention in the Dominican Republic. **(See p. 1460.)**

1965, September 30. Reorganization of Army Reserve and National Guard. Secretary McNamara achieved part of his objective of reserve component reorganization by eliminating a number of Reserve units and increasing the readiness of the remaining Reserve and National Guard units. Additional reorganization to this same end was accomplished 2 years later (June 2 1967).

1967, July 12–17. Race Riots in Newark, N.J. National Guard troops were employed to restore order.

1967, September 18. McNamara Announces Plans for Antiballistic Missile System. "Nike-X" (later called "Sentinel") would be a "light" system employing "Sprint" and "Spartan" missiles, capable of countering any long-range missile that Communist China might deploy in the next 10 years. A system to prevent Soviet missiles from reaching this country would be impossibly expensive. Congress failed to approve.

1968, January 23. *Pueblo* Incident. **(See p. 1430.)**

1968, March 2. C-5A "Galaxy" Displayed. This jet transport was the world's largest aircraft.

1968, March 30. NORAD Renewed. The U.S. and Canada agreed to extend the treaty against long-range bombing attack (see p. 1453) for another 5 years. Canada was not committed to involvement in continental defense against missiles.

1968, March 31. President Johnson Announces Cessation of Bombing of North Vietnam. (See p. 1329.)

1968, May 29. Disappearance of Nuclear Submarine U.S.S. *Scorpion*. This was announced after the vessel was 2 days overdue from a 3-month training exercise. There was a crew of 99 aboard.

1969, March 14. President Nixon Announces the "Safeguard" Antiballistic Missile System. This modification of the "Sentinel" system plan was approved by Congress (November 6).

1969, March 29–1970, March 17. Investigation of Alleged 1968 Massacre of Vietnamese Civilians at My Lai. (See p. 1328.) The allegation was made in a published letter to Secretary of Defense McNamara and several members of Congress by a former soldier, **Ronald L. Ridenhour.** An investigating committee headed by Lieutenant General William R. Peers was appointed by Secretary of the Army **Stanley Resor.** Nearly one year later Resor announced that the Peers investigation report had been submitted to him (March 14), that it established that a massacre had in fact occurred, and that information about the incident had been "kept from being passed up the chain of command" by "several individuals."

1969, July 20. First Men Reach Surface of Moon. Astronauts **Neil Armstrong** and Colonel **Edwin Aldrin, Jr.,** U.S.A.F., were carried to the moon by the Apollo 11 spacecraft.

1969, October 15. Vietnam War "Moratorium." Hundreds of thousands of Americans participated in an antiwar demonstration. In a similar demonstration 250,000 "marched on Washington" a month later (November 15).

1969, November 24. Nuclear Nonproliferation Treaty Signed. Signing by President Richard M. Nixon and Soviet President Nikolai V. Podgorny took place on the same day. The Senate had ratified it March 13.

1970, May 4. Kent State University Incident. Ohio National Guard troops, called out to control disorders at Kent State, fired into demonstrating students with insufficient provocation, killing four.

1970, May 25. Announcement of Deployment of MIRV Missiles. Multiple Individual Reentry Vehicles, or multiple warheads, were fixed on U.S. intercontinental ballistic missiles (ICBMs).

1970, August 28. Successful Test of Safeguard ABM System. A "Spartan" ABM missile launched from Kwajalein intercepted the nose cone of a "Minuteman" ICBM, launched from Vandenburg Air Force Base, 4,200 miles away.

1970, November 23. U.S. Coast Guard Returns Defector to Soviet Control. When a member of a crew of a Soviet fishing trawler jumped from his vessel to the USCGC *Vigilant*, Soviet sailors were allowed to board and seize him. The *Vigilant*'s Commander **Ralph W. Eustis** was subsequently relieved of command, and the First Coast Guard District commander and his chief of staff were retired.

1971, March 29. Lieutenant William H. Calley Convicted by Court-martial of Murder of Civilians at My Lai. This ended more than 4 months of frequently interrupted proceedings and 13 days of deliberation by the military court. Because of discrepancies in testimony, Calley was found guilty of only 22 of the 102 murders with which he had been charged. Four days later he was sentenced to life imprisonment. Although Calley's guilt in the taking of innocent lives was clear, paradoxically the verdict was opposed by as many liberal "dove" opponents of the war (who thought Calley an unfortunate victim of a cover-up by superiors who were responsible for the war and its alleged atrocities) as it was by ardent "hawk" supporters of the war (who thought he had merely been trying to do his duty in obedience to orders as he understood them). The resulting public furor assured lenient treatment

for Calley and his eventual release from a few months' confinement in prison 3½ years after his conviction (December 1974). Also contributing to sympathy for Calley was the fact that only 4 people had been tried for the incident and the alleged cover-up, and only Calley had been convicted. (See pp. 1328, 1456.)

1971, April 12. Largest "Conventional" Bomb Announced. This was the 15,000-pound "daisy cutter," being used in Vietnam to clear jungle areas the size of a baseball park, when set to explode 7 feet above ground.

1971, April 19–24. Antiwar Demonstrations. Vietnam veterans were prominent among the demonstrators in Washington and San Francisco.

1971, May 19. Defeat of the Mansfield Amendment. Senator **Mike Mansfield's** proposal for a 50 percent reduction of the 300,000 U.S. combat troops in Europe was defeated 61-36.

1971, June 13. *New York Times* **Publishes "Pentagon Papers."** A highly classified official record of U.S. involvement in Vietnam, prepared in the late 1960s at direction of Secretary of Defense McNamara, was covertly delivered to the *New York Times* by **Daniel Ellsberg,** a former government official and later a research analyst with the Rand Corporation, who was authorized access to the closely guarded documents. Ignoring the official classification stamps on the documents, the *Times* began publishing excerpts from the 47-volume collection until prohibited by government injunction 2 days later. The *Times* appealed the case to the Supreme Court, which ruled in favor of the newspaper. Publication was renewed, and selections were published in book form. Ellsberg was later tried for violation of government security legislation, but the case was dismissed on technical grounds.

1971, June 17. Treaty with Japan on Okinawa. The island was returned to Japan, but U.S. bases were to remain.

1971, November 6. Explosion of 5-Megaton H-Bomb under Amchitka Island. This was the last of some 20 underground tests for a "Spartan" missile warhead. Efforts by environmentalists and antiwar protesters to block the test were rejected by the Supreme Court. There were none of the immediate effects prophesied by the protesters.

1972, May 27. Cessation of Work on "Safeguard" ABM System. This was the result of a "summit" agreement between President Richard M. Nixon and Soviet Chairman Brezhnev (see p. 1371).

1972, June 3. Partial Release of Peers Report on My Lai Massacre. The report of Peers' investigating committee charged that some 300 civilians had been slaughtered in the My Lai incident, and that there was serious misconduct on the part of Americal Division commander, Major General **Samuel W. Koster,** and his assistant division commander, Brigadier General **George H. Young, Jr.,** in their failure to investigate the affair or to take disciplinary action against subordinates who had been obviously guilty of misconduct either in the operation which led to the massacre or in subsequent failure to take corrective or investigative action. General Koster was demoted and reprimanded (May 19, 1971) and allowed to retire; General Young was also reprimanded and allowed to retire. The full report was released 2 years later (November 13; 1974 see above and pp. 1328, 1456.)

1972, September 14. U.S. Senate Approves U.S.-Soviet Offensive Nuclear Missile Agreement. (See p. 1371.) By the "Jackson Amendment," proposed by Senator **Henry M. Jackson,** Senate approval was contingent upon U.S. reservation that the accord should not limit the U.S. "to levels of intercontinental strategic forces inferior to the limits provided for the Soviet Union." The agreement had permitted the U.S.S.R. to have about 1,618 ICBMs, including some 300 massive SS-9s, compared to 1,054 American ICBMs, generally smaller, but mostly with multiple warhead (MIRV) capability, in addition to a substantially larger fleet of U.S. long-range bombers.

1973, January 23. Vietnam Peace Accord. (See p. 1333.)

1973, January 27. End of U.S. Conscription. It was announced by Defense Secretary

Melvin Laird, 6 months earlier than expected, principally because of the end of the Vietnam War. Legislation remained in effect for use in event of an emergency.

1973, May 14–June 22. First Orbiting Space Station. A Navy crew manned the station, "Skylab."

1973, November 7. Congress Limits Presidential Authority to Commit Forces to Hostilities Abroad. Congress passed, over President Nixon's veto, legislation requiring (1) the president to inform Congress within 48 hours of committing any U.S. forces to a foreign conflict, or of "substantially" enlarging the size of a combat force already in a foreign country, and (2) the end of such commitment within 60 days unless its continuation was specifically authorized by Congress.

1974, December 14. U.S. Senate Ratifies Geneva Protocol. After a delay of nearly 40 years the Senate Foreign Relations Committee agreed to U.S. adherence to the Protocol on prohibition of gas and biological warfare (see pp. 1123, 1370).

Canada

1950–1953. Korean War. (See p. 1354.) Canada contributed 1 brigade of infantry, 1 artillery group, and an armored battalion to U.N. forces.

1953, January 8. Agreement on Radioactive Resources. Agreement between Britain, U.S., and Canada to share in uranium ore produced in Australia.

1954, May 13. St. Lawrence Seaway Approved by U.S. President Eisenhower signed legislation authorizing the U.S. to join Canada in constructing the Seaway. This was later dedicated by Queen Elizabeth and President Eisenhower (June 26, 1959).

1954, November 19. Joint Hemisphere Defense. The U.S. and Canada announced plans to construct a Distant Early Warning (DEW) radar line across Arctic Canada.

1958, May 19. NORAD Established. (See p. 1453.)

1963, May 11. U.S. Nuclear Warheads to Canada. Canada accepted U.S. Nuclear warheads for missiles installed on Canadian soil and used by Canadian NATO forces.

1963, August 16. Joint Control of Nuclear Air Defense Weapons. U.S. and Canada signed an agreement under which the U.S. would arm the Canadian Air Defense System.

1968, March 30. NORAD Extended for Five Years. (See p. 1456.)

1969, September 19. Canada Announces Reduction of NATO Force in Europe. Following a previous announcement (April 3, 1969), Prime Minister **Pierre Elliott Trudeau's** government announced that Canadian forces in Europe were to be reduced from 9,800 to 5,000 men in 1970, and that Canada would end its nuclear role in NATO by 1972.

LATIN AMERICA

Organization of American States

1947, September 2. Treaty of Rio de Janeiro. The Inter-American Defense Treaty, transforming the old Pan American Union into the Organization of American States, was signed by all nations of the Western Hemisphere except Canada. This was ratified by the U.S. Senate (December 8) and became effective when ratified by the 14th nation, Costa Rica (December 3, 1948).

1948, April 26. Charter for the Organization of American States. This was established at a conference in Bogotá.

1954, March 1–28. Caracas Resolution. The Tenth Inter-American Conference of Foreign Ministers, at Caracas, declared that control of the political institutions of any American state by the Communist movement, an extension of the political system of a Continental power outside the Western Hemisphere, would be a threat to the peace of America.

1959, August 12–18. Emergency OAS Ses-

sion. This was in response to Cuban threats of invasion or infiltration in the Caribbean area.

1962, February 14. Cuba Excluded from the Organization of American States.

1964, July 26. OAS Votes Sanctions against Cuba. This action was sparked mainly by Cuban subversion efforts in Venezuela in 1963. OAS members were to sever all diplomatic and consular relations with Cuba; all trade and transportation to Cuba was banned, save for food and medicine.

1964, August 3. Mexico Refuses to Adopt Sanctions against Cuba. (See above.)

1968, May 6. OAS Establishes Peace Force for the Dominican Republic. (See p. 1460.)

Mexico

1964, August 3. Mexico Refuses to Adopt Sanctions against Cuba. (See above.) Mexico was thus the only state in the hemisphere retaining diplomatic relations and normal trade connection with Cuba.

1968, July 26–October 2. Student Disorders at National University. In an effort to end 7 weeks of sporadic violence, the Mexican Army seized the university (September 18). Student protests erupted into bloody battles, mostly involving students against police (September 19–24). There were several deaths. Two months of unrest climaxed in a major battle between the Army and students, in which about 50 students were killed. The result, however, was an end to the disorders.

Caribbean Region

Anguilla

1967, July 11. Independence of Anguilla. The tiny island withdrew from confederation with St. Kitts and Nevis, and vainly sought association with Britain, Canada, or the U.S.

1969, March 19. British Occupation. Unrest and economic troubles led Britain to send a mixed force of 100 paratroops, Marines, and policemen to take control. They were soon withdrawn (September 15), but the island remained virtually a British dependency.

Cuba

1952, March 10. Coup d'État. General **Fulgencio Batista** seized control of the country and established a dictatorship.

1953, July 26–27. Uprising in Santiago and Bayamo Suppressed. An effort by **Fidel Castro** to seize a government armory was defeated; Castro and his brother Raúl were captured and imprisoned.

1956, April 29. Rebellion Suppressed. The uprising occurred at Matanzas.

1956, December 2. Cuba Claims Castro Killed. Castro, who had been released from prison, went to Mexico and led an insurgent group landing in Oriente Province (November 30), was defeated and presumed (erroneously) to have been killed. Actually he and his followers fled to safety in the Sierra Maestra Mountains.

1957–1958. Insurrection. Revolutionaries under Fidel Castro carried out a successful guerrilla campaign from the Sierra Maestra Mountains of Oriente Province, gaining increasing popular support. Castro took the offensive and moved out of the mountains (October 1958).

1959, January 1. Castro Victorious. Batista fled the country as the revolutionaries swept through the country and seized Havana (January 8).

1959, January 7. U.S. Recognizes Castro Government.

1960, May 7–Sept. 25. Cuba Joins Soviet Bloc. This was initiated by resumption of diplomatic relations (May 7), which had been broken in 1952; culminated by Khrushchev's threat to use intercontinental rockets to support Cuba if attacked by U.S. (September 25).

1960, November 1. Castro Rebuffed. President Eisenhower, in response to Castro's threats against Guantánamo, said the U.S. would "take whatever steps are necessary to defend" the base.

1961, January 3. U.S. Breaks Diplomatic Relations.

1961, April 15–20. Bay of Pigs Incident. An attempted invasion of Cuba by approximately 1,400 anti-Castro Cuban revolutionaries clandestinely supported by the U.S. Central Intelligence Agency, who did not receive the air and naval support from U.S. forces which they had been promised, was defeated by Castro forces. This failure was a serious blow to American prestige.

1961, May 1. Castro Proclaims Cuba a Socialist Nation. Secretary of State **Dean Rusk** next day said that Cuba had become a full-fledged member of the Communist bloc.

1962, September 11. Soviet Threatens War in Support of Cuba. The U.S.S.R. accused the U.S. of preparing for an invasion of Cuba, and warned that any U.S. attack on Cuba or on Soviet ships bound for Cuba would mean war.

1962, September–December. Missile Crisis. **(See p. 1454.)**

1963, March 30. U.S. Bans Exile Raids Against Cuba.

1964, July 26. OAS Sanctions against Cuba.

1965, November 6. Cuba Permits Refugees to Fly to United States. These flights continued until August 1971, during which time 246,000 Cubans flew from Havana to Miami.

1966, February 6. Castro Accuses Communist China of "Betraying" Cuban Revolution. He denounced Chinese propaganda efforts in Cuba and failure of China to provide promised assistance.

Dominican Republic

1949, June 20–21. Revolt Suppressed.

1959, June 23. Cuban Invasion. Cuban-supported invasion of the Dominican Republic by 86 men was crushed by forces of dictator **Leonidas Trujillo.**

1961, May 30. Assassination of Trujillo. This ended the repressive dictatorial regime, which had lasted for 31 years.

1962, January 13. Unsuccessful Coup Attempt.

1963, April 27–30. Dispute with Haiti. This resulted from a raid by Haitian police into the Dominican embassy in Port au Prince. The OAS mediated the dispute.

1963, September 25. Military Coup d'État. The leftist government of President **Juan Bosch** was overthrown by military leaders. Later the government was returned to civilian control (October).

1965, April 24–25. Military Coup d'État. The civilian triumvirate was overthrown. A bloody civil war broke out between leftist and military adherents of former President Bosch and Army and Air Force units under the command of Brigadier General **Elias Wessin y Wessin.** Although Wessin gained control of much of the capital and the country, fighting continued.

1965, April 28. United States Intervention. President Johnson sent in a force of Marines to protect Americans. These were followed by U.S. Army airborne units, as the fighting continued, with the pro-Bosch "rebels" regaining some lost ground, and the adherence of previously uncommitted army units.

1965, May 5. Truce Agreement. Under pressure from the U.S. and the OAS, a cease-fire was agreed upon between the rebel units, under the provisional President, Colonel **Francisco Caamans Deno** and a newly established 3-man military junta led by Brigadier General **Antonio Imbert Barreras.** U.S. forces in the country were 12,439 Army troops and 6,924 Marines. More than 2,000 Dominican deaths were reported in the confused fighting.

1965, May 6. OAS Agrees to Establish Interamerican Peace Force. This would replace the United States force. Participating countries were Venezuela, Brazil, Guatemala, Costa Rica, Honduras, Paraguay, and the U.S.

1965, May 13–19. Renewed Civil War. The junta attacked the rebel forces and drove most of them from the capital. U.S. forces, attempting to hold open an International Security Zone, were accused of aiding both sides. Under U.S. pressure a new truce was agreed.

1965, May 23. OAS Interamerican Armed Force Becomes Operational. The United States began to reduce its 21,000-man force,

which had had 19 men killed during the hostilities.

1965, August 31. Provisional Government Approved. Following resignation of the 3-man junta, the rival factions agreed with an OAS Peace Committee to establish a government under Provisional President **Hector Garcia-Godoy.** Sporadic violence continued in the country, however, for several months, becoming more intense in early 1966.

1966, June 3. Election of President Joaquin Balaguer. A centrist, he defeated left-wing candidate Juan Bosch and a right-wing candidate.

1966, June 28. Withdrawal of OAS Force Begins. The first units of the 6,000-man U.S. contingent of the 8,200-man force began to leave the country following an OAS resolution (June 24).

Haiti

1946, January 11. Military Coup d'État. President **Élie Lescot** was overthrown. The military junta selected **Dumarsais Estimé** as president (August 16).

1950, April. Military Coup. Estimé was ousted and replaced by Colonel **Paul Magloire** (October 23).

1956–1958. Chaos in Haiti. Magloire was forced to resign (December 13, 1956) and **François Duvalier** was elected president (September 22, 1957). By ruthless repression he restored order (July 1958).

1959, August 12–18. Emergency session of the Organization of American States was called to ease tensions in the Caribbean area.

1959, August 13. Cuban Invasion. The invading force of 30 armed men was crushed.

1960, November 22. Duvalier Proclaims Martial Law. The dictator took advantage of disorders at the University of Haiti to increase his control over the country.

1962–1963. Border Incidents with Dominican Republic.

1963, August 5–7. Rebel Invasion from the Dominican Republic. A force of Haitian exiles, hoping to overthrow the government of dictator President François Duvalier, landed by sea in northern Haiti, having embarked in the Dominican Republic. The rebels were defeated and fled across the border into the Dominican Republic, which was charged with complicity by Haiti.

1969, June 4. Unidentified Aircraft Attacks Port-au-Prince. Six homemade incendiary bombs dropped from a transport plane caused 3 deaths. Haiti accused Cuba.

Trinidad-Tobago

1962, August 31. Independence Granted by Great Britain.

1970, April 21–25. Riots and Army Mutiny. Racial tension between blacks (47 percent of population) and East Indians (36 percent) flared into violence, which became more serious when perhaps one-fourth of the 800-man army mutinied in support of black-power rioters. Loyal troops suppressed the rebellion after much shooting but negligible bloodshed.

Central America

Costa Rica

1948, April 13–20. Revolution. The dictatorial government of President **Teodoro Picado** was overthrown by rebels led by Colonel **José Figueres.**

1948, December 12. Invasion by Armed Rebels from Nicaragua. This was repelled; strained relations with Nicaragua resulted.

1949, April 3. Unsuccessful Coup Attempt.

1955, January 11. Invasion and Rebellion Suppressed. President José Figueres again accused Nicaragua of aggression and asked the OAS Council for aid. An OAS committee set up as a result of this complaint reported (February 17) that the rebels were mostly Costa Ricans who had been based in Nicaragua, and called for conciliation of the dispute between the 2 nations.

1956, January 9. Agreement with Nicara-

gua. It provided for effective cooperation in joint surveillance of borders.

1960, November 9–14. Clash with Nicaraguan Rebels. **(See p. 1463.)**

El Salvador

1948, December 12. Military Revolt. President **Castaneda Castro** was overthrown, and replaced by a revolutionary junta.

1960, October 26. Coup d'État. The government of President **Jose Maria Lemus** was overthrown by a military junta led by Colonel **Cesar Yanes Urias.**

1969, June 24–28. War with Honduras. Long-smoldering economic and territorial border disputes (1967–1969) were sparked to war by rioting over a series of soccer games. El Salvadoran troops had occupied considerable Honduran territory when both sides accepted a cease-fire arranged by the OAS. Sporadic fighting continued for more than a month, however, with the advantage remaining with El Salvador.

1972, March 25. Attempted Coup d'État. Troops loyal to the president, General **Fidel Sanchez Hernandez,** suppressed a military revolt in brief but bloody fighting; more than 300 were killed on both sides.

Guatemala

1949, July 16–18. Rebellion Suppressed.

1954, June 18–29. Revolution. Anti-Communist forces under Lieutenant Colonel **Carlos Castillo Armas** invaded the country and called on the people to overthrow leftist President **Jacobo Arbenz Guzmán.** Arbenz sought asylum in the Mexican embassy (June 27). A cease-fire was effective after about 100 casualties had been incurred on both sides. Castillo Armas became leader of a junta, and shortly afterward was declared president (July 1).

1955, January 20. Revolt Suppressed. Continuing Communist-inspired insurgency.

1957, October 25. Coup d'État. President **Luis Arturo Gonzalez Lopez** was ousted by a military junta headed by Colonel **Oscar Mendoza.** Colonel **Guillermo Flores Anendaño** was proclaimed president (October 26).

1960, November 16. Threatened Cuban Invasion. U.S. warships protected Guatemala and Nicaragua, threatened by invasion from Cuba.

1963, March 30. Coup d'État. Colonel **Enrique Peralta Azurdia** proclaimed himself president. Low-level, Communist-inspired insurgency continued to cause sporadic violence throughout the country.

1968, August 18. Communist Guerrillas Kill U.S. Ambassador. John Gordon Mein was slain in an apparent kidnap attempt.

1970, April 5. Communist Guerrillas Kill West German Ambassador. Count **Karl von Spreti** was kidnapped, then assassinated.

Honduras

1956, October 21. Military Coup. A junta took control after charges of election fraud against President **Julio Lozano Diaz** caused violence and bloodshed (October 7).

1957, May 2–3. Border Clashes with Nicaragua. **(See p. 1463.)**

1961, January 27. Invasion Attempt from Nicaragua. Honduran rebels, possibly encouraged by Nicaragua, were repulsed.

1963, October 3, Coup d'État. President **Ramon Villeda Morales** was ousted after sharp fighting between rebel and loyal troops by Colonel **Osvaldo Lopez Arellano,** chief of the armed forces, who proclaimed himself President.

1969, June 24–28. War with El Salvador. **(See above.)**

Nicaragua

1947, May 26. Coup d'État. General **Anastasio Somoza** overthrew the government of President **Leonardo Argüello.**

1948–1955. Disputes with Costa Rica. **(See p. 1461.)**

1956, September 21. Assassination of President Somoza. His son, **Luís,** was elected by Congress to complete his term.

1957, May 2–3. Border Clashes with Honduras. Troops of both sides withdrew following OAS mediation.

1959, May 30–June 14. Attempted Insurgent Invasion. Air-transported rebels were defeated by forces of General **Anastasio Somoza Debayle** (brother of President **Luis A. Somoza Debayle**), who accused Cuba of fomenting insurrection.

1960, January–May. Insurgent Border Raids. These were from Honduras (January 2, February 29, and May 14) and Costa Rica (January 9).

1960, November 11–15. Insurgent Invasion from Costa Rica. This was defeated by Nicaraguan troops, aided by Costa Rican troops (November 9–14). Cuba was blamed for supporting the insurgency.

1961, July 26. Sandinista National Liberation Front (FSLN). Nicaraguan insurgents, trained and indoctrinated in Cuba, established the new organization in Honduras, named in honor of the 1920–1930s revolutionary leader, César Augusto Sandino (see p. 1148).

1963. Sandinista Base Established in Nicaragua. The FSLN began guerrilla operations in the northern mountains of Matagalpa, but failed to rally the local peasants to the cause of armed insurrection. Sporadic raids continued.

1967, January 22–23. Attempted Coup d'État. A coalition of civilians and dissatisfied military officers attempted a coup that was suppressed by the National Guard, commanded by Anastasio Somoza Debayle; this youngest son of Anastasio Somoza was elected president (February 5).

1972–1974. Civil Unrest. The increasingly despotic rule of dictator Somoza and his ruthless National Guard alienated much of the population.

Panama

1949, November 26. Coup d'État. Dr. **Arnulfo Arias** was installed as president by the national police.

1951, May 10. Coup d'État. President **Arnulfo Arias** was overthrown in violent fighting. He was succeeded by Vice President **Alicibiades Arosmena.**

1955, January 25. Treaty with the U.S. Yearly payments for the Canal Zone were increased from $430,000 to $1,930,000.

1959, April 24–May 1. Cuban-Based Insurgent Invasion. More than 100 invaders, many Cuban, were defeated, and most killed or captured.

1959, November 3. Anti-U.S. Riots in Panama.

1964, January 9–10. Anti-U.S. Riots. Panama broke diplomatic relations with the U.S. because of riots in the Canal Zone.

1964, April 3. Resumption of Diplomatic Relations with the U.S.

1968, October 11. Coup d'État. Recently inaugurated President Arnulfo Arias was overthrown by the National Guard. A military junta elected 2 of its members, Colonel **Bolivar Urrutia** and Colonel **Jose M. Pinella,** as president and vice president, respectively.

1969, December 15. Coup d'État. Brigadier General **Omar Torrijos,** who had been a principal leader in the October 11 coup against President Arias, ousted the 2 colonels who had outmaneuvered him to gain power after the coup.

South America

Argentina

1948, March 4. Agreement with Chile against Britain. The 2 nations agreed on joint defense of their rights in the Antarctic and the Falkland Islands against British claims and occupation.

1951, September 28. Revolt Suppressed. President **Juan Perón** blamed the military revolt, suppressed by loyal troops, on the activities of former U.S. Ambassador **Spruille Braden.** A state of virtual martial law was declared, which gave Perón dictatorial powers.

1955, June–September. Violence, Disorders, Unrest. Minor military and civilian revolts were ruthlessly suppressed by the Perón regime. Perón was excommunicated by the

Catholic Church for suppressing Catholic schools and imprisoning priests.

1955, September 16–19. Perón Overthrown. As disorders spread, Perón declared a state of siege (September 11). The armed forces then rose in a brief revolt. Perón fled. A junta under Major General **Eduardo Leonardi** took control.

1955, November 13. Military Revolt. Leonardi, accused of being "fascist," was overthrown and replaced by Major General **Pedro Aramburu.**

1956, June 10–14. Peronist Revolt Suppressed. Later Peronist plots were discovered and smashed (August 15, November 22).

1960, June 13. Unsuccessful Revolt. An army unit in San Luis surrendered without bloodshed when no other military unit responded to radio appeals for a national uprising.

1962, March 29. Military Coup d'État. President **Arturo Frondizi** was ousted by the armed forces.

1962, August 8–11. Army Mutiny. President **Jose Maria Guido** accepted Army demands for a change in the War Secretary and Army commander in chief.

1962, December 11–12. Military Revolt. This was suppressed by loyal troops.

1963, April 2–5. Military Mutiny and Rebellion. The rebels, mostly naval, were defeated after brief fighting at scattered locations.

1966, June 28. Coup d'État. A military junta ousted President **Arturo Illia** and installed Lieutenant General **Juan Carlos Ongania** as provisional president.

1970–1975. Growth of Terrorist Violence. The country was plagued by a rash of kidnappings and assassinations.

1970, June 8. Coup d'État. A military junta ousted President Ongania and installed Brigadier General **Roberto Marcelo Levingston** as president.

1971, March 23. Coup d'État. A military junta, headed by Army Commander General **Alejandro Augustin Lanusse,** ousted President Levingston.

1971, July 1. Britain and Argentina Agree to Disagree on the Falkland Islands. Although neither side relinquished its claim to sovereignty (Malvinas Islands to Argentina), they agreed to resolve outstanding issues by negotiation.

1973, July 13. Return of Peron. He was elected president, with his second wife, **Isabel,** vice president. She succeeded him upon his death (July 1, 1974).

Bolivia

1946, July 17–21. Popular Revolution. President **Gualberto Villaroel** was killed and succeeded by a liberal government.

1949, May–September. Unrest and Rebellion in the Tin Mines. Suppressed by the army, but left the nation on the verge of bankruptcy.

1950, January 14. Unsuccessful Coup Attempt.

1950, May 18–19. Unsuccessful Coup Attempt.

1951, May 16. Military Coup. A 10-man military junta, led by General **Hugo Ballivián,** seized control in Bolivia.

1952, April 8–11. Revolution. The junta was overthrown by a popular revolt under **Hernán Siles Zuazo.** Doctor **Victor Paz Estenssoro** was proclaimed president (April 16).

1953, November 9. Unsuccessful Revolt.

1958, May 16–22. Unsuccessful Revolt. Uprising in Santa Cruz, suppressed by troops.

1958, October 21. Revolt Suppressed.

1959, April 19. Unsuccessful Revolt in La Paz.

1959, June 26. Unsuccessful Revolt in Santa Cruz.

1960, March 19. National Police Revolt. Crushed by the army.

1964, November 3–4. Military Revolt. President Paz Estenssoro was overthrown by Army General **Alfredo Ovando Candia** and Air Force General **René Barrientos Ortuno.** Ovando soon resigned, leaving popular Barrientos in control.

1966–1967. Cuban-Sponsored Insurgency. Guerrilla activity intensified after arrival of

Ernesto (Che) Guevara from Cuba (November 7, 1966).

1967, October 8–16. Elimination of Che Guevara and His Guerrillas. Military forces commanded by Brigadier General **Juan Jose Torres,** an anti-Communist officer with socialist political views, methodically tracked down, surrounded, then annihilated Che and his small band of followers. Guevara, wounded, was captured (October 8) and died the next day.

1969, April 27. Death of President Barrientos. He was killed in a helicopter crash. He was succeeded by Vice President **Adolfo Siles Salinas.**

1969, September 26. Coup d'État. General Ovando seized control in a bloodless coup and named himself president.

1970, October 6–7. Coup d'État and Countercoup. President Ovando resigned under pressure from right-wing military officers. During the confusion, however, leftist General Torres seized control and proclaimed himself president.

1971, August 19–22. Coup d'État. Right-wing military officers, led by Colonel **Hugo Banzer Saurez,** ousted President Torres after a brief and not very intensive struggle.

Brazil

1954, August 8–25. Civil Disorder. Unable to restore order, President **Getulio Vargas** resigned under military pressure, then committed suicide (August 24).

1955, November 11. Coup d'État. Military officers, led by Lieutenant General **H. B. D. Teixeira Lott,** deposed Acting President **Carlos Coimbra da Luz,** who was accused of fostering a coup to cancel the election of **Juscelino Kubitschek** as president. Kubitschek took office as scheduled (January 31, 1956).

1961, August 26. Military Coup.

1963, September 12. Military Revolt Suppressed.

1964, March 31. Military Revolution. President **Joao Goulart** was deposed and a military dictatorship was established.

1969, August 31. Military Junta Takes Control. Leaders of the 3 armed forces assumed authority after President **Artur da Costa e Silva** was incapacitated by a stroke.

Chile

1973, September 11. Coup d'État. The Chilean tradition of military subordination to civilian political authority ended when a 4-man military junta seized power from President **Salvador Allende Gossens,** an avowed Marxist, after 3 years of increasing chaos under his presidency. (It is not clear to what extent this chaos was the result of Allende's inefficiency, of obstructionism by right-wing civilian and military elements, and of subversion prompted by the U.S. Central Intelligence Agency.) During brief but bitter fighting for the Presidential Palace, Allende was killed, apparently by suicide.

Colombia

1945–1965. Endemic Civil War Continues.

1948, April 9–10. Uprising in Bogotá. This revolt, embarrassing to the government because it occurred during a meeting of the Inter-American Conference, was suppressed.

1948–1958. La Violencia; Low-Scale Guerrilla Insurrection. A variety of local and national issues and problems were exploited by Colombian Communists to stir up a constant state of revolt and insurrection in rural areas of the country. At least 250,000 violent deaths occurred during this decade of violence.

1953, June 13. Military Coup d'État. President **Laureano Gomez** was overthrown by the military under Lieutenant General **Gustavo Rojas Pinilla.**

1957, May 10. Military Coup d'État. Rojas Pinilla overthrown by junta.

Ecuador

1947, March 14. Unsuccessful Coup Attempt.

1947, August 23. Military Coup d'Etat. President **Jose Maria Velasco Ibarra** was overthrown in a bloodless revolt by Colonel **Carlos Mancheno.** (Velasco Ibarra had also been ousted in 1935.)

1947, September 1–3. Successful Counterrevolution. Mancheno was overthrown and replaced by **Carlos Julio Arosemena Monroy.**

1951–1955. Dispute with Peru. This was due to disputed frontier locations in an area which had been in dispute for over a century. There were intermittent border clashes and arguments before the International Court of Justice.

1961, November 7–9. Coup d'Etat. Antigovernment riots led to the overthrow of the government of President Jose Maria Velasco Ibarra and clashes between military units supporting rival candidates to replace Velasco. After brief fighting, Army and Air Force leaders agreed to install Vice President **Carlos Julio Arosemena Monroy** as president.

1963, July 11. Coup d'Etat. Military leaders ousted President Arosemena, who was replaced by a 4-man military junta.

1966, March 29. Antimilitary Coup. The junta resigned as a result of antigovernment riots.

1971, January 18. United States Suspends Arms Aid to Ecuador. This was a result of numerous incidents (28 since 1966) of Ecuadoran seizure of American tuna fishing boats, more than 12 miles off shore but within Ecuador's claimed territorial waters, extending 200 miles from shore. Ecuadoran seizures continued.

1972, February 15. Military Coup d'Etat. President Jose Maria Velasco Ibarra was ousted by a military junta, which named General **Guillermo Rodriguez Lara** as President. This was the fourth time Velasco had been ousted as president by a military coup.

Guyana

1953, October 9. British Intervention. The left-wing government of Prime Minister **Cheddi Jagan** was ousted by British troops to prevent a Communist takeover of the self-governing colony.

1962–1966. Endemic Violence. Promised independence in 1966, the colony was torn by disorders, riots, and bloodshed, primarily because of racial and political strife between East Indians (49 percent of the population) and blacks (32 percent).

1966, May 26. Independence of Guyana. Despite the continuing explosive internal situation, Britain granted the promised independence, leaving a military garrison in the country. Following national elections Guyana became a republic, but remained in the British Commonwealth (February 23, 1970).

1969, January 2–4. Rebellion Crushed. Rebels from Brazil, apparently supported by large ranch owners and possibly by Venezuela (because of a long-standing border dispute) were driven out; some were killed and captured.

1969, August 19–September 10. Border Clash with Surinam. This resulted from Dutch occupation of territory in a disputed border region. It ended when the Dutch withdrew.

Paraguay

1947, March 30–August 20. Civil War. Efforts by former President **Rafael Franco** to seize control were defeated by the government of President General **Higinio Morínigo.**

1948–1949. Chaos. After the retirement of Morínigo the nation had 5 presidents in 5 months.

1954, May 5. Army Revolt. President **Frederico Chaves** was deposed. General **Alfredo Stroessner,** commander of the armed forces, later was installed as president (August 15).

1959–1960. Rebel Invasions. About 1,000 rebels, based in Argentina, invaded and were crushed (December 1959). President Stroessner blamed the action on Cuba. Six smaller invasions were also crushed (1960).

1963–1974. Stability under Relaxed Dictatorial Control. President Stroessner, allowing limited opposition political activity, was thrice reelected president (1963, 1968, 1973).

Peru

1948, October 27–29. Military Revolt. The government of President **José Bustamante** was overthrown by a military junta under General **Manuel Odría.**

1951–1955. Disputes with Ecuador. **(See p. 1466.)**

1956, February 16–25. Revolt at Iquilas. The military uprising collapsed when all army units failed to join.

1962, July 18. Military Coup d'État. President **Manuel Prado Ugarteche** was overthrown. A military junta took over, under the leadership of General **Ricardo Perez Godoy.**

1963, March 3. Coup d'État. Chief of State Perez was ousted by the junta following 2 months of internal violence. He was succeeded as chief of state by General **Nicholas Lindley Lopez.**

1964–1965. Communist Revolt. A very minor state of revolt was maintained by Castroite Communist agents in remote Andes regions.

1968, October 3. Coup d'État. The government of President **Fernando Belaunde Terry** was ousted without bloodshed; Army Chief of Staff General **Juan Velasco Alvarado** proclaimed himself president.

Uruguay

1961, January 11–12. Riots and Street Fighting. The government blamed these on Cuban and Soviet agitation.

1967–1973. Era of the Tupamaros. This leftist guerrilla organization, including members of many prominent families and a large number of professionals, terrorized the nation with large-scale robberies and kidnappings their specialty. Victims included U.S. police advisor Dan A. Mitrione, kidnapped, then killed (August 10, 1970), and British Ambassador Geoffrey Jackson, kidnapped and held for 8 months (January 8–September 9, 1971).

1973, February 10. Military Control Granted by President. Under great pressure from rebellious military leaders, President **Juan Maria Bordaberry** ceded practically all governmental authority to military commanders, to permit them to marshal the resources of the nation against the Tupamaro guerrillas.

1973, February–December. Elimination of the Tupamaros. The Army conducted a wholesale campaign, arresting and imprisoning hundreds of members. Some fled to Argentina, where they led an antigovernment group.

Venezuela

1945, October 18. Military Revolt.

1948, November 24. Bloodless Coup d'État. Colonel **Carlos Delgado Chalbaud** seized control. He was later assassinated (November 13, 1950) and replaced by **Germán Suárez Flámerich.**

1951, October 13. Revolt Suppressed.

1952, December 2. Coup d'État. Colonel **Marcos Perez Jimenez,** a member of the junta, seized power "by decision of the armed forces," nullifying the results of a national election 3 days earlier.

1958, January 1–23. Revolt. President **Marcos Pérez Jiménez** suppressed the first revolutionary actions, but was ousted by a military junta in a renewed revolt (January 21–23).

1958, July 23. Counter-revolt Suppressed.

1958, September 7. Unsuccessful Coup Attempt.

1960–1974. Communist Insurgency. Continuous small-scale harassment of the central government through the period.

1961, June 26. Military Uprising Suppressed.

1962, May 4–5, June 4. Military Uprisings Suppressed. President **Romulo Betancourt** became more firmly seated in control.

1963, November. Castro Plot Discovered. Cuban agents and large quantities of arms were captured by government troops.

AUSTRALASIA

Australia

1950–1953. The Korean War. **(See p. 1354.)** Australia contributed 2 infantry battalions, 1

air fighter squadron, 1 air transport squadron, 1 aircraft carrier, 2 destroyers, and a frigate to the United Nations forces.

1965–1972. The Vietnam War. (See p. 1321.) As a member of SEATO, Australia contributed forces ranging from a battalion to a brigade group and supporting elements (about 7,500 troops) to the allied forces supporting the government of South Vietnam.

1965, June 3. First Australians Arrive in Vietnam. A contingent of more than 100 infantrymen arrived, soon followed by 400 more (June 8).

1966, March 8. Conscription Adopted. This was the first peacetime draft in Australia's history, provoking antigovernment demonstrations. The purpose was to send draftees to an augmented Australian contingent in Vietnam.

1971, November 1. ANZUK Force Established at Singapore. (See p. 1421.)

1972, December 5. End of Conscription. The newly elected government of Prime Minister **Gough Whitlam** carried out its electoral campaign promises of ending the peacetime draft and withdrawing from Vietnam.

1972, December 18. Last Unit Withdraws from Vietnam.

1973, January 21–22. Australia and New Zealand Reaffirm Ties with SEATO and the United States. Announcements were made by Prime Ministers Gough Whitlam and **Norman Kirk** at a meeting in Wellington, N.Z.

New Zealand

1950–1953. The Korean War. (See p. 1354.) New Zealand contributed an artillery group and 2 frigates to the United Nations forces.

1965–1972. The Vietnam War. As a member of SEATO, New Zealand contributed an artillery battery (later increased to a battalion of 550 men) to the allied forces supporting the government of South Vietnam. (See p. 1321.)

1971, November 1. ANZUK Force Established at Singapore. (See p. 1421.)

1973, January 21–22. New Zealand and Australia Reaffirm Ties with SEATO and the United States. (See above.)

1973, July 21–29. New Zealand Warship Enters French Nuclear Test Zone. As a protest against French nuclear tests near Tahiti (see p. 1377), a New Zealand frigate cruised just outside the 12-mile limit of the territorial waters of Mururoa Atoll, where the French were conducting their tests.

Nauru

1968, January 31. Independence. An Australian-administered United Nations trust territory (1947–1968), Nauru was a small, nitrate-rich island northeast of the Solomon Island chain.

Fiji

1970, October 10. Independence. This was the 96th anniversary of Fiji becoming a British crown colony (1874).

XXII

THE DOMINANCE OF TECHNOLOGY:

1975–1991

SIGNIFICANT WARS

Iran–Iraq Gulf War

1980, September 9. Iraq Invades Iran. Sensing military weakness in Iran because of the Iranian revolution, Iraq launched a major offensive to resolve the long-standing border dispute (see p. 1403). The Iraqis at first met slight resistance. However, they were very cautious and failed to exploit opportunities for quick victory. The Iranians recovered from the initial defeats and a stalemate ensued along a battle line penetrating into Iran more than 30 miles in some places. The city of Khorramshahr was captured by the Iraqis.

1980–1982. Stalemate. Both sides made repeated efforts to break through the opposing lines. Casualties were heavy, but little was accomplished.

1982, January 23–March 3. Jordanian Volunteers Aid Iraqi Gulf War Efforts. (See p. 1512.)

1982, March 22–30. Iranian Counteroffensive. The Iranians began a determined attempt to drive the Iraqi forces from Iranian soil, and pushed Iraqi forces back as much as 24 miles in some places.

1982, April 30–May 20. Renewed Iranian Offensive. The Iranians again pushed the Iraqis back. The Iranians drove until they approached the Iraqi defenses near the port city of Khorramshahr, which the Iraqis had captured early in the war.

1982, May 22–23. Recapture of Khorramshahr. In the night attack the Iranians encircled the Iraqi force in Khorramshahr, which surrendered. The Iranians captured large quantities of Soviet arms, apparently supplied by Syria. The Iranians, ebullient because of their victory, proclaimed as their war aim and "greatest right" the deposition of Iraqi President Saddam Hussein (May 26).

1982, June 10–20. Iraq Offers Truce and Troop Withdrawal. Iraq proposed a truce and promised to withdraw all Iraqi troops from Iranian soil within 2 weeks of an Iranian acceptance of the truce. Iraq also declared a unilateral cease-fire. Iran responded by reiterating its demand for Hussein's removal from office (June 11, June 20).

1982, July 14–30. Iranian Offensive. Iran launched another offensive. The Iranians made some headway, but suffered heavy casualties for minimal gains.

1982, July 21–August 30. Air War Escalates. Iranian planes attacked Baghdad (July 21). Iraq retaliated with air attacks on Khargh Island, striking Iran's oil shipping facilities and sinking 2 merchant ships (August 18–30).

1982, September–November. New Iranian Offensives. The Iranians regained some territory on the northern front near the border town of Sumar, which Iraq had taken early in the war (October 1). The Iranians again attacked west of Dezful and advanced 3 miles into Iraqi territory near the town of Mandali (November 2). Iraqi troops counterattacked and drove the Iranians back to the border. To the south the Iranians advanced to within artillery range of the stategically important Baghdad-Basra highway (November 17).

1982, December 21. Arab Peace Initiative. The leaders of Algeria, United Arab Emirates, and Saudi Arabia attempted to mediate between the two warring gulf states.

1983, February 2–March 9. Iraqi Air Attacks Cause Massive Oil Spill. Iraqi air attacks on Iranian Persian Gulf oil-producing facilities resulted in the largest oil spill in Persian Gulf history.

1983, February 7–16. Al Amarah Offensive. Iranians advanced toward the Baghdad-Basra road in an attempt to cut that road at Al Amarah. They reached within 30 miles of Al Amarah before being halted and thrown back by an Iraqi counterattack. The Iraqis claimed they knocked out 100 Iranian tanks and took 1,000 POWs.

1983, April–October. Repeated Iranian Offensives. Attacks west of Dezful failed to make significant gains (April 11–14). Next the Iranians launched an offensive into northern Iraq (July 23). Advances were negligible. Iranian troops then tried to break the Iraqi line west of Dezful in a major offensive (July 30). The Iraqis repulsed a number of Iranian thrusts, then counterattacked, but were repulsed in turn (August 6–12). Casualties were severe on both sides. The Iranians launched still another offensive on the northern front and closed a salient that had been opened by Iranian Kurdish rebels (October 20).

1983, July 20. Iraq again Attacks Iranian Oil Centers. Iraqi planes struck Iranian oil industry facilities.

1984, February 11–22. Renewed Iranian Offensive. Iran tried to carry the war deeper into Iraq by resuming the offensive on both the northern and central fronts (February 11). Iraq claimed that on the central front its troops had approached the Baghdad-Basra highway. The Iranians renewed attacks toward Basra in the south (February 22). The Iraqis repulsed the attack, only after severe loss of troops and some territory. Their counterattacks to recapture undeveloped Iraqi oil fields on Majnoon Island also failed. The Iranians claimed that Iraq used poison gas in these battles. International observers confirmed that mustard gas was apparently employed. During this battle Iraqi planes attacked Iranian oil installations near Kargh Island.

1986, July. Capture of Faw. A surprise Iranian offensive, spearheaded by carefully-trained commandos employing infiltration tactics, defeated Iraqi forces on the Faw peninsula and captured the area. This battle signalled the failure of Saddam Hussein's efforts to wage the war on a "limited budget."

1986, Autumn. Shifting Iraqi Strategy. Abandoning the essentially defensive strategy employed since 1982, Saddam Hussein and the Iraqi Ba'athist leadership opted for a more vigorous approach to the war. They expanded the army from 12 divisions to over 40, tapping previously untouched university students as a manpower source for the vastly expanded Republican Guard. The Iraqis also began to employ their air force more aggressively, and with an eye toward closer cooperation with the army in ground operations.

1987, May 17. Attack on the USS *Stark*. Iraqi aircraft, apparently by mistake, attacked the frigate USS *Stark* in the Persian Gulf with French-made Exocet surface-skimmer missiles. The *Stark*'s crew suffered 37 fatalities, and Iraq apologized.

1988, February–August. The War of the Cities. The Iraqis struck at Iranian cities with their Scud missiles, causing considerable dam-

age. The Iranian response, hampered by geography and a lack of missiles, was limited.

1988, April–August. Iraqi Offensives. A series of Iraqi offensives showed the feeble state of the Iranian Army. Four offensives resulted in lopsided victories, with heavy Iranian losses but minimal Iraqi casualties. Faw was recaptured (May), and Iranian forces were left in disarray.

1988, July 3. *Vincennes* Incident. The cruiser USS *Vincennes,* operating in the Persian Gulf, mistook a civilian Iranian airliner for an attacking aircraft, and shot it down, killing all 290 passengers and crew. The airliner had not answered repeated requests for identification, and it was well within missile-launch range of the *Vincennes* when it was shot down. The U.S. government offered to pay compensation to relatives of the dead.

1988, August. Iranian Reorganization. The *Pasdaran* (Revolutionary Guard Corps) was brought under army command, and Speaker of the *majlis* (parliament) Rafsanjani was appointed supreme military commander by Ayatollah Khomeini.

1988, August 20. Cease-fire. Iran announced its acceptance of a U.N.-sponsored cease-fire. Ayatollah Khomeini compared this to "taking poison," but recent defeats coupled with growing Iranian war-weariness compelled the government to end the war.

Britain–Argentina Falkland Islands War

1982, April 2. Argentina Invades the Falklands. A 2,000-man task force landed at Port Stanley. The 84-man Royal Marine garrison surrendered after a 3-hour fight.

1982, April 3. Argentinians Seize South Georgia. A small task force landed at Grytviken, South Georgia, and took control of the island after a 7-hour battle with a 22-man detachment of Royal Marines.

1982, April 3. U.N. Declares Argentina Aggressor. The British took the case to the U.N. Security Council, which voted to declare Argentina an aggressor and demanded immediate withdrawal (Resolution 502). Argentina rejected the resolution, but offered to negotiate with Britain. The British refused to negotiate until Argentina withdrew from the Falklands.

1982, April 5. Falkland Task Force Leaves Britain. Two light aircraft carriers (HMS *Hermes* and HMS *Invincible*) and 28 other vessels sailed from Portsmouth for the Falklands. The naval task force included an amphibious task force of 2,000 Royal Marine commandos.

The commander of the Falkland Islands Task Force, Rear Admiral **Sir John Woodward,** sailed from Gibraltar with 7 warships and Royal Fleet Auxiliary (RFA) support vessels for Ascension Island where they joined the ships sailing from Britain. Approximately 2,000 additional troops sailed from Southhampton soon after on the passenger cruise ship *Canberra,* refitted to be used as a troop and supply ship (April 9.) By this time the RAF had deployed Hercules and VC-10 Air Transport aircraft at Ascension Island, 3,750 miles northeast of the Falklands. Ascension became a vital supply base for the Falklands Task Force, which would receive tons of stores from Ascension transported by the RAF transport aircraft and by ships of the Royal Fleet Auxiliary (RFA) and Merchant Navy. Ascension also served as a base for RAF bombers and reconnaissance aircraft.

1982, April 8–28. U.S. Attempts Diplomatic Solution. Secretary of State **Alexander Haig** carried on shuttle diplomacy by flying back and forth between Buenos Aires and London in an attempt to reach a peaceful solution to the crisis. Both sides refused to budge from their positions. The U.S. then announced support for Britain (April 30).

1982, April 12. Britain Announces Falklands Quarantine. Britain announced that as of April 28 any Argentine vessel within 200 miles of the Falklands would be considered an aggressor and be treated accordingly.

1982, April 18. British Reconnaissance Units Land. Special Boat Service (SBS) troops (Royal Marines) and Special Air Service (SAS) troops (Army) began secret landings on

the Falklands to carry out intelligence operations, which later proved invaluable to the invasion force.

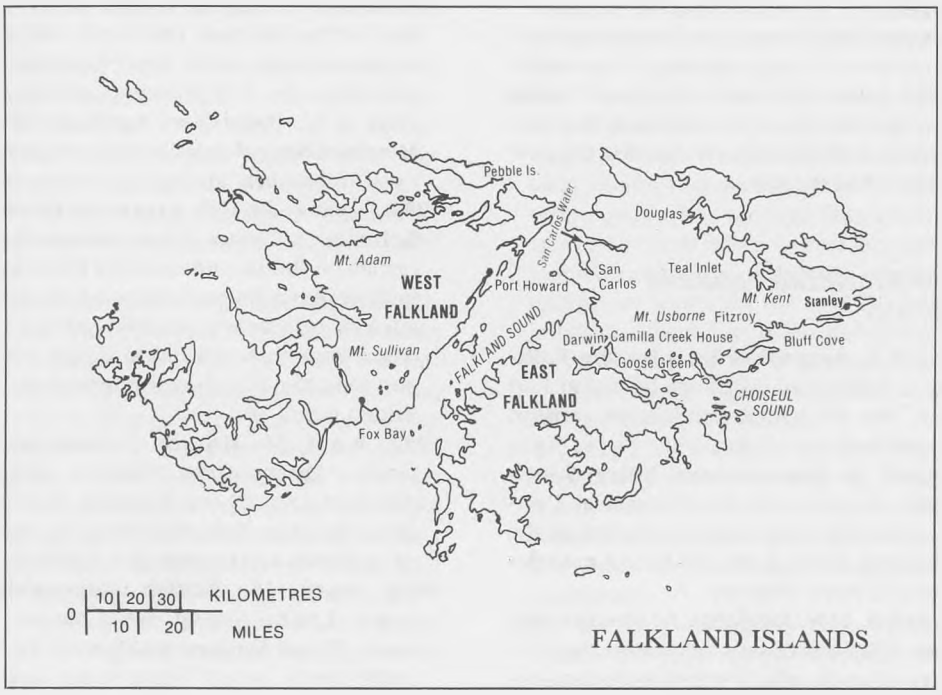
1982, April 25–26. British Recapture South Georgia. British helicopter machine-gun and rocket fire forced an Argentine submarine to run aground at Grytviken Harbor. The next morning a contingent of Royal Marines overcame the Argentine detachment at Grytviken and SAS troops easily recaptured Leith, taking 156 Argentines captive. This concluded operations in South Georgia. The recapture of South Georgia was not only a psychologically important victory, but was of strategic value as well, giving British ships a staging area.

1982, April 28. British Blockade Goes into Effect.

1982, May 1–3. British Air and Naval Successes. A British Vulcan bomber from Ascension Island, and Harrier jump jets from the task force's light carriers, pounded Port Stanley's airfield (May 1). The field was effectively closed. (There were 4 additional Vulcan bombing attacks in the course of the campaign.) Harriers also bombed a smaller airfield at Goose Green while Sea King helicopters strafed Argentine positions at Darwin. That same day a British Harrier shot down an Argentine Mirage with a Side-winder air-to-air missile. Naval combat intensified when Britain's nuclear-powered submarine HMS *Conqueror* hit the World War II vintage cruiser *General Belgrano* with 2 wire-guided torpedos (May 2). The *General Belgrano* sank in less than an hour; 368 men were lost.

1982, May 4. Argentine Reprisal. An Argentinian Super Etendard fighter-bomber fired an Exocet air-to-sea missile, hitting HMS *Sheffield* 30 miles away. Although the *Sheffield* did not sink, the damage was too extensive to warrant salvaging, and she was scuttled.

1982, May 12. *Queen Elizabeth 2* Sails for Falklands. Refitted for service as a troop transport, the liner left for the Falklands carrying the 5th British Army Brigade, composed of Welsh Guards, Scots Guards, and the 7th Gurkhas.



1982, May 14–15. Pebble Island Raid. In a daring night raid, SAS troops with destroyer naval gunfire support severely damaged the Argentine base at Pebble Island, destroying 11 aircraft, the base radio station, and fuel and ammunition dumps.

1982, May 21. San Carlos Beachhead Established. The 3rd Marine Commando Brigade, reinforced with 2 battalions from the Army's Parachute Regiment, established a beachhead at San Carlos on the west coast of East Falkland. British Harriers downed 15 Argentine planes, while losing one Harrier. However, 3 British ships were hit by Argentine planes and one, the HMS *Ardent*, was lost. By the end of the day 3,000 British troops were ashore.

1982, May 23–25. Argentine Air Attacks and British Buildup. Argentine aircraft continued to mount strong attacks against British ships. The British lost 1 ship on May 23 and 2 on May 25. Nonetheless, the British continued their buildup and by May 24 they had 5,000 men and 5,000 tons of ordnance and supplies ashore. British Harriers and surface-to-air missiles fired from ships and by troops ashore shot down 36 Argentinian planes.

1982, May 26–27. Advance on Port Darwin. The British plan was to strike at Port Stanley as quickly as possible. But first it was determined to secure the southern flank and lines of communication by eliminating Argentine positions at Goose Green and Darwin approximately 20 miles southeast of the San Carlos beachhead. The 2nd Battalion of the Parachute Regiment moved south at night from San Carlos toward Darwin.

1982, May 28. British Take Darwin. At 0200, with supporting naval gunfire from British ships offshore, the attack on Darwin began. The 2nd Battalion also got air support from Harriers. The Argentines offered staunch resistance but were pushed out of their positions into the settlement. They surrendered the following afternoon and the paratroops pushed on to Goose Green (May 28).

1982, May 28–29. Goose Green Seized. The Argentines were well dug in and a bitter fight continued into the night. Early in the morning the last Argentinian position surrendered to the paratroops. The British loss was 17 killed, with 31 wounded. The Argentine loss was 250 killed and 121 wounded. The British took 1,000 prisoners.

COMMENT. *The British victories at Darwin and Goose Green secured the British southern flank, and lines of communication to the beachhead at San Carlos. They also gave the British ground forces a decided psychological advantage over the Argentinians.*

1982, May 27–June 1. Advance on Stanley. While the 2nd Battalion of the Parachute Regiment was advancing on Darwin (see above), the 3rd Marine Commando Brigade's 45th Royal Marine Commando and the Parachute Regiment's 3rd Battalion marched northeast from the San Carlos beachhead to Douglas and thence southeast to Teal Inlet, a 50-mile journey over rough terrain (May 27–30). Major General **Jeremy Moore** assumed direct control of the land operations from San Carlos. Meanwhile, a small task force of SAS troops had been dropped by helicopter on Mount Kent, 10 miles west of Stanley (May 28). It was joined by the 42nd Royal Marine Commando and a supporting light artillery unit (June 1–2).

1982, June 1. 5th Infantry Brigade Lands at Beachhead. The 5th Infantry Brigade (Scots Guards, Welsh Guards, and Gurkha Rifles) began landing at San Carlos. At the same time, the 2nd Battalion of the Parachute Regiment advanced from Goose Green to Fitzroy (18 miles southwest of Stanley), which had been abandoned by the Argentinians.

1982, June 6–8. Advance to Bluff Cove. Elements of the 5th Brigade moved forward to Goose Green and were then transported by sea to Bluff Cove northeast of Fitzroy to take up position for the attack on Port Stanley. Disembarkment operations were hindered by air attacks from Argentine Mirages. Two British troop transport ships were hit and abandoned with heavy losses (June 8). British Harriers downed 4 Mirages. British ships and planes began to soften up Argentinian positions at Port Stanley.

1982, June 11–12. British Take Heights Overlooking Stanley. The 3rd Royal Marine Commando Brigade launched a night attack on 3 key Argentine strong points: Mount Longdon, Two Sisters, and Mount Harriet. Despite surprise, resistance was substantial at Mount Longdon on the north flank and Two Sisters in the center. Mount Harriet, enveloped from the rear, fell quickly.

1982, June 13–14. Final Night Assault. The 2nd Parachute Battalion (victors at Darwin and Goose Green) made a surprise night attack on Wireless Ridge 3 miles east of Mount Longdon. To the south a battalion of Scots Guards took Tumbledown Mountain after a tough fight with Argentine Marines. Gurkhas then passed through the Scots Guards to take Mount William less than 4 miles west of Port Stanley. A planned third phase of the operation proved unnecessary as Argentinian resistance collapsed.

1982, June 14. Argentine Surrender. The Argentine military governor of the Falklands, General **Mario Benjamin Menendez,** surrendered to General Moore.

1982, June 14. Surrender of South Thule. An Argentine naval detachment that had maintained a research facility at South Thule since 1976 surrendered to a small task force of Royal Marine Commandos without a struggle.

COMMENT. *The British successfully carried out a very difficult operation on short notice over very long lines of communication (over 8,000 miles). The war was an excellent proving ground for modern high technology weaponry. However, the principal lesson was that wars are still won by well-trained, determined soldiers, sailors, and airmen.*

*The 1982 War in Lebanon**

1982, June 6. Operation "Peace for Galilee." At 11 A.M., 3 division-size Israeli task forces crossed the border into Lebanon. Their immediate objective was to entrap and destroy PLO forces in southern Lebanon. On the left, Task Force A, with support from a small amphibious force that landed north of Tyre, moved rapidly along the narrow coastal plain bypassing or smashing PLO strongpoints. By nightfall they had surrounded Tyre. In the center, Task Force C captured key Litani River bridgeheads, took Beaufort Castle, secured the Arnoun Heights, and encircled Nabatiye. On the right Task Force H advanced up the Bekaa Valley toward Hasbaiya to secure the eastern flank of Task Force C. Although Task Force H at first experienced no serious resistance, upon entering the Hasbaiya area the Israelis came under fire from Syrian artillery. A fourth task force, Task Force B, composed of naval commandos, paratroops, armor, and artillery, made a surprise amphibious landing north of Sidon at the mouth of the Awali River at 11 P.M. They overran several PLO units and isolated PLO forces in Sidon.

1982, June 7. Second Day, Western Sector. While elements of Task Force A moved into Tyre and eliminated PLO resistance south of the Litani River, others approached Sidon from the south. Reserves mopped up areas that had been bypassed. Near Tyre, Task Force A units surrounded and attacked the PLO base at the Rashidiye refugee camp. Meanwhile, Task Force B broke into 3 battle groups. One moved north within 7 kilometers of Damour, south of Beirut; another enlarged the beachhead to the east, forcing the PLO defenders to retreat into the mountains; the third blocked Sidon from the north. Elements of Task Force C took Nabatiye and cleared the Arnoun-Nabatiye plateau of pockets of resistance while other elements pushed northwest toward Sidon to link up with detachments of Task Force A and B to encircle Sidon. Task Force D now entered Lebanon in Task Force C's sector, and by evening approached the Bessri Bridge north of Jezzine to cut off the coastal plain area from the Bekaa Valley. This task force received fire from Syrian artillery as forward elements approached the Bessri River. Although careful to avoid battle with the Syrians, the Israelis returned fire to silence the Syrian artillery.

*See map, p. 1506.

1982, June 7. Second Day in the Bekaa Valley. Task Force H did not advance, but exchanged fire with PLO and Syrian elements. During the day Task Force H was joined by task forces V and Z to form the Bekaa Forces Group (BFG), about 2 divisions in strength, commanded by Major General **Avigdor Ben Gal.** The mission of BFG was to gain control of the Bekaa Valley and the flanking mountains: the western slopes of the Anti-Lebanon Mountains and Mount Hermon on the east, and the Lebanon Mountains on the west. The BFG would then cut the Beirut-Damascus highway.

1982, June 8. Third Day, Western Sector. Task Force A carried out mop-up operations in Tyre and the Rashidiye refugee camp, and captured Sidon. The Israelis were careful to avoid casualties to Lebanese or Palestinian civilians. Task Force B (reinforced by a battle group from Task Force A) and elements of Task Force C continued to advance slowly on Damour. Opposition was light. Meanwhile, Task Force D reached the Bessri River Bridge where it met and defeated the Syrian 85th Brigade. Toward evening the task force reached Beit el Dine and Ain Zhalta about 10 miles south of the Beirut-Damascus highway.

1982, June 8. Third Day in the Bekaa Valley. Task Force Z attacked the Syrian right flank which, with PLO units, held Jezzine. The combined infantry and armor attack crushed the Syrian defenders, destroying 32 tanks and inflicting heavy casualties. To the east Task Force H captured the village of Mimes and by evening was about 15 kilometers from the main Syrian defense zone in the Rashaiya area.

1982, June 9. Fourth Day on the Coast. Elements of Task Force B attacked Damour which, despite fierce PLO resistance, was taken by evening. Task Force C and elements of Task Force A and remaining units of Task Force B bypassed Damour and drove north reaching the southern suburbs of Beirut by nightfall.

1982, June 9. Fourth Day; Israeli Air Victory. The Israeli Air Force attacked Syrian SAM missile batteries in the Bekaa Valley destroying 17 out of 19 in a 3-hour battle without loss of a single plane. Twenty-nine Syrian MiGs were shot down.

1982, June 9. Fourth Day in the Bekaa Valley. Task Force H advanced up the Valley and through the Anti-Lebanon Mountains to envelop the Syrian-PLO left flank. Resistance was substantial, but progress was rapid. Task Force Z advanced north from Jezzine toward the Syrian Kara defense zone. Task Force V was committed to combat in the center of the Bekaa Valley and by evening reached the village of Dneibe.

1982, June 10. Fifth Day on the Coast. Task Force A continued to mop up in southern Lebanon, including Sidon and the El Hilweh refugee camp where there was considerable resistance, but proceeded slowly to avoid civilian casualties. Task Force B advanced toward the mountain town of Kfar Matta while Task Force C, reinforced by elements of Task Force A, reached the outskirts of Khalde about 3 miles from the Beirut international airport. Task Force D mopped up in Ain Zhalta, approached Ain Dara and came to within 2 miles of the Beirut-Damascus highway.

1982, June 10. Fifth Day in the Bekaa Valley. The Israelis approached the Syrian main defense area in 3 task forces on a broad front. In the center Task Force H drove up the Valley and cleared out PLO and Syrian units deployed between the Litani River on the west and the Hasbani River to the east. To the west Task Force Z advanced as far as Zalia, within 10 miles of the Beirut-Damascus highway. On the east, in very mountainous terrain, Task Force V also advanced well into the main Syrian defense zone, south of the Beirut-Damascus road. In the air the Israeli Air Force knocked out 2 more SAM batteries.

1982, June 11. Sixth Day; Israelis Close on Beirut and the Beirut-Damascus Highway. Khalde, on the outskirts of Beirut, fell to Task Force C and Israeli troops took up positions on hills overlooking the Beirut Airport. Task Force D approached the Beirut-Damascus highway, which it could control with fire from the dominating hills. To the east in the Bekaa Valley, the Israelis probed the new Syrian defense line just below the Beirut-Damascus highway.

1982, June 11. Sixth Day; Cease-Fire. The fierce fighting of the 2 previous days had cost the Syrians heavy losses in both men and armor. Both they and the Israelis agreed to a cease-fire as of noon. However, fighting with the PLO continued.

COMMENT. *In 6 days of fighting, the Israelis had destroyed the military forces of the PLO in Lebanon and captured enormous quantities of equipment. They had also decisively defeated the Syrians and had artillery in position within range of Damascus.*

1982, June 12–15. Mop-Up; Resistance at El Hilweh Refugee Camp. The Israelis continued to battle remnants of the PLO in the Sidon area, particularly at the El Hilweh refugee camp. The PLO held thousands of Palestinians hostage in their stronghold, hoping at least for a propaganda victory. The Israelis surrounded the camp and advanced slowly, minimizing casualties to civilians and to their own troops. They gradually squeezed the PLO fighters into the center of the camp and finally overwhelmed the survivors (June 15).

1982, June 12–13, Battle of Ain Aanoub. The Israelis, attempting to link up with Christian Lebanese Phalangist forces near Beirut, battled PLO units and Syrian commandos deployed with the PLO. The Syrians and Palestinians were forced to retreat. They lost many tanks and APCs and suffered heavy casualties. The Israelis then linked up with the Phalangists. PLO and Syrian troops in Beirut were cut off from the Syrian forces to the east.

1982, June 14. Israelis Reach Beirut. Advancing to the eastern and southeastern suburbs of Beirut, the Israelis closed on the Syrian and PLO forces trapped in Beirut. They also took control of the southern part of the international airport. The Israelis subsequently deployed along the "green line," separating Christian eastern Beirut from the Moslem western sector of the city (June 18). The Israelis had effectively invested Beirut.

1982, June 22–26. Final Israeli Offensive. The Israelis launched a combined arms offensive toward the Beirut-Damascus highway just east of Beirut. Combat raged for 4 days. By June 25, the Syrians were driven from the outskirts of Beirut. The Israelis controlled the Beirut-Damascus highway from east Beirut to Sofar, 10 miles to the east of the city, and most of the ridges north and south of the highway. Only the Dahr el Baider Ridge separated the Israeli forces in the western sector from the Syrians in the northern Bekaa Valley.

1982, June 26. New Cease Fire. With a new cease-fire in effect major offensive combat operations were complete; however, the Israelis continued to besiege Beirut in order to assure the withdrawal of the PLO and Syrians from the city.

1982, June 26–September 3. Siege of Beirut. Having trapped the PLO and Syrians in west and southwest Beirut, the Israelis determined to coerce the PLO to leave on terms favorable to Israel rather than assault the city. Wishing to minimize civilian casualties the IDF had pilots drop leaflets warning civilians to leave the city along the coastal road controlled by Christian militamen or by the Israeli-controlled Beirut-Damascus highway (June 27). The Israelis then began aerial, naval, and artillery bombardment of the Moslem sectors of the city. The Israelis demanded the PLO surrender their arms and leave Lebanon. While the Israelis were conducting their siege operations, U.S. Special Envoy **Philip Habib,** with the aid of King **Fahd** of Saudi Arabia, conducted multilateral negotiations between the Israelis, the PLO, the government of Lebanon, and the Syrians. The Israelis tightened the noose around West Beirut by turning off essential utilities and prohibiting food and medical supplies from being sent into the besieged sectors of the city (July 3). They later eased these restrictions (July 7). Habib won PLO approval of a withdrawal plan (August 6). The Israeli Cabinet agreed to the Habib plan (August 19) and the PLO and Syrians began withdrawing 2 days later (see below). The Israelis lifted the siege as the last PLO fighters departed the city (September 3).

1982, August 21–28. Deployment of Multinational Peacekeeping Force. With the agreement of the governments of Israel, Syria, and Lebanon, a multinational peacekeeping force with independent contingents of about 1,200 men each from the United States (U.S. Marines), France, and Italy was deployed in

Beirut to ensure safe withdrawal of the PLO and Syrian forces besieged in Beirut by Israeli forces.

1982, September 16–18. Massacre at Sabra and Shatilla Refugee Camps. Phalangist militiamen slaughtered at least 400 men, women, and children while conducting an operation in search of PLO fighters. Israeli troops in the vicinity had permitted the Phalangists to enter the camp to search for PLO soldiers, and apparently did nothing to prevent these massacres.

THE 1982 WAR IN LEBANON (JUNE 6–SEPTEMBER 3): STRENGTHS AND LOSSES

	Strengths	*Killed*	*Wounded*	*Missing or Prisoners*	*Tanks Lost*	*Aircraft Lost*
Israeli Armed Forces	65,000	305	1,230	2	40	2
Palestine Liberation Organization	18,000	1,100	2,350	5,100	20	—
Syrian Armed Forces	45,000	1,350	4,800	220	420	92
Total Syrian & PLO Forces	63,000	2,450	7,150	5,320	440	92

1982, September 28. Kahan Commission of Inquiry Established. The Israeli government announced that **Yitzhak Kahan,** president of the Supreme Court, would head a commission which would conduct an official inquiry to determine whether or not the IDF or the government of Prime Minister **Menachem Begin** could be held responsible for the massacre of Palestinian refugees at the Sabra and Shatilla camps. The inquiry began several weeks later (October 16) and was completed 3 months later (January 16).

1983, February 8. Israeli Report on Massacre. An official Israeli government inquiry conducted by the Kahan Commission into the Sabra and Shatilla camp massacres concluded that Phalangist militiamen bore all direct responsibility for the massacres. However, Israeli officials were charged with indirect responsibility for failure to heed information that Lebanese Christian Phalangists were likely to seek revenge on Palestinians for the assassination of Lebanon's President-elect **Bashir Gemayel** (see p. 1505). Israeli Prime Minister Menachem Begin and Defense Minister Ariel Sharon were held to be indirectly responsible for the massacres, as were IDF Chief of Staff Lieutenant General **Rafael Eytan,** Director of Military Intelligence Major General **Yehoshua Saguy** and Brigadier General **Amos Yaron,** commander of the Israeli division deployed in Beirut.

1983, November 24. Israeli-PLO Prisoner Exchange. The Israelis and PLO agreed to exchange 4,500 PLO prisoners of war held by the Israelis for 6 Israelis held by the PLO since their capture more than a year before.

Kuwait (Second Gulf) War

1990, April–July. Iraqi Pressure on Kuwait. Dictator-president Saddam Hussein of Iraq brought pressure against Kuwait to yield on 3 main issues. First, he wanted control of Bubiyan and Warbah Islands to improve Iraqi access to the Persian Gulf from Umm Qasr. Second, he desired concessions on repayment of loans provided by Kuwait during the war with Iran, and on disputed oilfield rights in northern Kuwait. Finally, he wanted a higher OPEC-wide oil price, to help pay for postwar reconstruction in Iraq. He hoped to capitalize on widespread popular Arab dissatisfaction with the West, with conservative Arab governments, and with the slow pace of economic development. Few observers credited his threats to attack Kuwait if his demands were not met.

1990, August 2. Iraqi Invasion of Kuwait. Iraqi troops, some moving by helicopter, invaded and occupied Kuwait. The emir fled the

first day; the Iraqis were in full control by August 4. The U.S., the European Community, and Japan swiftly imposed trade sanctions (August 3–4), and Iraqi actions were condemned by the Soviet Union and 14 of 21 Arab League members (August 4).

1990, August 2–6. U.N. Resolutions, U.S. Response. In immediate response to the Iraqi invasion, the U.N. Security Council passed Resolution 660, condemning Iraqi aggression against Kuwait and demanding immediate withdrawal. President Bush ordered U.S. forces to Saudi Arabia (Operation Desert Shield) to protect that country against anticipated Iraqi aggression (August 6). The U.N. Security Council (Resolution 661) imposed economic sanctions on Iraq.

1990, August 8. Iraq Formally Annexes Kuwait. Kuwait became the nineteenth province of Iraq.

1990, August 9. U.S. Forces in Saudi Arabia. A 2,300-man brigade of the 82nd Airborne Division and FB-111 attack aircraft arrived in Saudi Arabia, and B-52 bombers in Diego Garcia, as the first stage of U.S. deployments. Egyptian and Moroccan forces began arriving soon after (August 11). This was the beginning of a major U.S. force deployment to Saudi Arabia, matched by smaller forces from many other U.N. members.

1990, August 13–17. Iraqi "Guest" Policy. With the crisis deepening, Saddam Hussein announced that Westerners in Kuwait and Iraq would be kept in Iraq as "guests," and warned that in case of war they would be used as "human shields" around vital Iraqi installations.

1990, August 22–23. Crisis Deepens. President Bush authorized the activation of 50,000 reservists for U.S. Armed Forces. Iraqi troops surrounded 9 embassies in Kuwait which had refused to close (August 23) following Iraqi annexation of Kuwait.

1990, August 25. U.N. Blockade. In Resolution 665, the Security Council voted 13–0 (Cuba and Yemen abstained) to authorize U.S. and allied warships in the Gulf to use force to impose the sanctions of Resolution 661.

1990, September–1991, February. "Rape of Kuwait." Refugees from Kuwait report massive looting, arson, and random violence by Iraqi troops. The most blatant activity, Iraqi sabotage of Kuwaiti oilwells, left over 500 wellhead fires burning by the war's end. Outcry over Iraqi actions in the West was balanced by approval among many pro-Saddam Arabs, who were jealous of Kuwaiti oil wealth.

1990, September 25. U.N. Air Embargo. In Resolution 670, the Security Council extended the embargo-blockade to cover airborne traffic.

1990, October 29. Iraqi Damage Liability. In Resolution 674, the Security Council affirmed Iraq's liability for damages associated with its invasion and occupation of Kuwait.

1990, November 8. U.S. Force Expansion. U.S. forces in Saudi Arabia and vicinity totaled about 225,000, including 82nd Airborne, 24th Mechanized Infantry, and 101st Airborne (Airmobile) Divisions, and Air Force, Navy, and Marine forces. President Bush announced that another 200,000 troops would be deployed to ensure "an adequate offensive military option."

1990, November 18. Iraqi Response. Saddam Hussein announced that 670,000 Iraqi troops would be deployed to Basra and Kuwait provinces to match the increased U.N.–U.S. deployment. He also announced that, barring hostilities, he would release "guests" at the end of the year.

1990, November 29. U.N. Ultimatum. In Resolution 678, the Security Council authorized members "cooperating with the government of Kuwait . . . to use all means necessary" to compel immediate and unconditional Iraqi withdrawal from Kuwait, if Iraq did not comply with previous resolutions by January 15, 1991.

1990, November 30–December 15. Release of Hostages. Iraq permitted all remaining Americans, Europeans, Japanese, and Soviets to leave Iraq and Kuwait. The U.S. State Department reported that some 500 Americans voluntarily remained in Kuwait and Iraq (December 11). The U.S. closed its embassy in

Kuwait and evacuated the 5 remaining staff members (December 14).

1991, January 17. War Begins. Following the expiration of the deadline imposed by U.N. Resolution 678 (midnight January 15), U.N. air forces begin operations against Iraq at 4 A.M., local time, as part of Operation Desert Storm. During the first day U.S., French, British, and Saudi aircraft flew some 1,200 sorties, with over 600 combat sorties, striking at Iraqi industrial sites, air defense installations, airfields, and military command and communications facilities.

Comparison of Forces

U.N. COALITION

U.S. forces were: 6 aircraft carrier battle groups, 2 Marine divisions (1st and 2nd), and 7 Army divisions (1st Cavalry, 1st and 3rd Armored, 1st and 24th Mechanized, 82nd Airborne, and 101st Airmobile), and 2nd and 3rd Armored Cavalry Regiments, with some 380,000 ground troops, about 2,200 tanks, 500 combat helicopters, and 1,500 combat aircraft in-theater. U.N. Allied forces were about 110,000 combat troops in 8 divisions, with about 1,200 tanks, 150 helicopters, and 350 combat aircraft. The U.N. Allied forces included contingents from the United Kingdom, France, Italy, Canada, Kuwait, Saudi Arabia, Egypt, Syria, Qatar, Bahrain,

Multiple Launch Rocket System (MLRS) in Saudi Arabia, 1991 (*U.S. Army photo*)

UAE, Oman, Morocco, Czechoslovakia, Pakistan, Bangladesh, Senegal, and Niger; there were also Belgian and German contingents based in Turkey. Commanding the coalition forces was American Army General H. Norman Schwarzkopf.

IRAQ

Iraq had about 550,000 troops in Kuwait and southwestern Iraq, organized in some 42 divisions with 4,200 tanks and 150 helicopters, supported by about 550 combat-ready aircraft.

1991, January 16–February 22. The Air War. Allied air forces range virtually unchallenged over Iraq, striking at military, transport, and communications targets. Western precision-guided and "smart" munitions proved very effective, and gun-camera video footage of impressively precise weapons strikes gained wide circulation in the Western media. By the third week of February, the Iraqi Air Force had lost over 40 planes to 21 lost by the Allies, with 30 Iraqi planes downed against no Allied losses in air-to-air combat. There were more than 70,000 Allied sorties, just over half being combat sorties over enemy territory. About 140 Iraqi planes flew to Iran, where they were interned.

1991, January 19–February 26. The Scud Campaign. Employing a large arsenal of Soviet-made Scud surface-to-surface ballistic missiles, plus Iraqi-made variants, Saddam Hussein struck at both Saudi Arabia and Israel (the latter country not even a belligerent). The Scuds inflicted remarkably few casualties, partly because they were limited to conventional high-explosive warheads, and partly because of the effectiveness of U.S. Patriot surface-to-air missiles (SAMs) in intercepting and destroying incoming Scuds. The U.N. Allied air forces also made great efforts to interdict Scud launching sites, but mobile Scud launchers made the task difficult, and scattered launches continued until the end of the war. There were 35 Scud launches in the first week, 18 in the second week, 8 in the third, and about 20 more toward the end of the war, including a total of 39 fired at Israel. The heaviest loss of life from Scuds occurred near the end of the war, when a Scud struck and destroyed a barracks building near Dharhan housing U.S. troops, killing 24 National Guard personnel (February 25).

1991, January 29–31. The Battles for Wafrah and Khafji. Apparently hoping to provoke a battle with U.N. ground forces, several Iraqi battalions launched a series of limited attacks against the Saudi border towns of Wafrah and Khafji, beginning in the predawn hours of January 29. After initial confusion (partly caused by Iraqi attempts to feign surrender), Saudi, Qatari, and U.S. Marine units drove the attackers from Wafrah (early on January 30) and then from Khafji (January 31). U.N. casualties were light, but the Iraqis lost at least 30 tanks and other armored vehicles, and several hundred Iraqi soldiers were captured. The U.S. suffered 11 killed and about 35 wounded, including 6 Marines who were killed in "fratricide," when a Maverick missile from a U.S. F-16 destroyed a LAV-25 light APC (January 29).

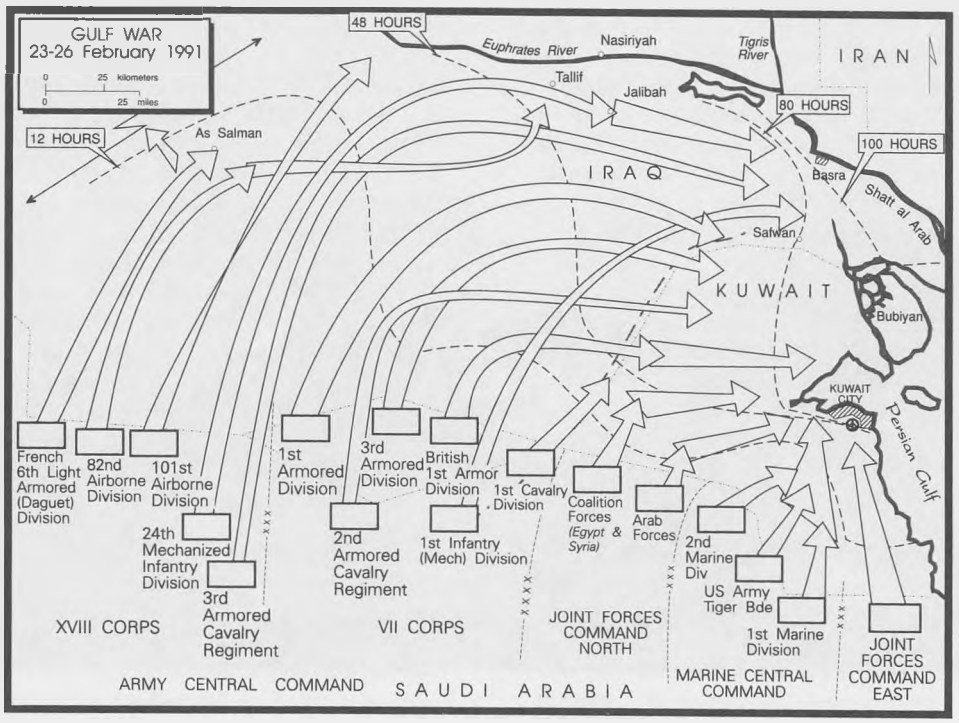
1991, February 13. Baghdad Claims U.S. Air Attacks on Civilians. U.S. aircraft, probably F-117A "Stealth" fighter-bombers, struck and destroyed a communications bunker in Baghdad. Iraq claimed the bunker was a civilian bomb shelter, and saturated the TV waves with pictures of charred bodies and weeping relatives. The U.N. command repeated that its policy was to avoid strikes on strictly civilian targets. Although civilians (possibly military dependants) were apparently sheltered on the lower level, there was undoubtedly military communications equipment on the upper floor.

1991, February 15–22. Last-Minute Soviet Peace Initiative. The U.S.S.R. made a last-ditch (and ultimately futile) effort to arrange a peaceful settlement. The U.N. Allies, led by the U.S., France, and Great Britain, rejected 2

withdrawal proposals, which ignored or conflicted with various portions of the Security Council resolutions. The Soviets repeated an earlier commitment to support, but not participate in, U.N. military actions.

1991, February 22. President Bush's Ultimatum. President Bush demanded that Iraqi forces withdraw from Kuwait by noon EST, February 23, or face further Allied action. The ultimatum was denounced by Saddam Hussein as "shameful."

1991, February 23. Operation Desert Saber. The Ground War Begins. The Allied ground assault began about 4 A.M., local time. It encompassed 3 main components: (1) a main outflanking move, through southern Iraq, well to the west of Kuwait, by the VII and XVIII Corps to which the British 1st Armored Division and the French 6th Light Armored Division respectively, were attached; (2) a thrust northward along the coast toward Kuwait City by the U.S. Marines with Saudi and other Pan-Arab forces; and (3) an attack northeastward through southwestern Kuwait, toward Kuwait City mounted by the Pan-Arab Force (largely Saudis, Egyptians, and Syrians). The main effort began as an attack due north toward the Euphrates (February 23). The XVIII Corps, with the French, isolated the operations area from the rest of Iraq and protected the western flank. The VII Corps, with the British 1st Armored Division, turned eastward and drove east, south of the Euphrates River toward Basra and northern Kuwait, while Marine and Pan-Arab forces approached Kuwait City (February 24). U.N. forces reached the outskirts of Kuwait City and drew near Basra (February 25). The vaunted Republican Guard, elite units of the Iraqi Army, were easily overwhelmed by U.S. and British armor (February 25–26). This last defeat marked the end of organized Iraqi resistance.



U.N. casualties were astonishingly low: 95 killed, 368 wounded, and about 20 missing during the 100-hour operation. In many instances Iraqi defenders abandoned their positions before U.N. troops reached them, and news reports showed heavy damage inflicted by U.N. aircraft and helicopters on columns of fleeing Iraqi vehicles. Iraqi losses were difficult to assess, but at least 60,000 Iraqis were captured, and as many as 30,000–50,000 were killed, and at least 50,000 wounded in air raids or ground combat between January and the war's end. Most Iraqi heavy equipment in the combat area was destroyed (much of it by U.N. aircraft), or captured.

The poor Iraqi performance, in contrast to even the worst-case Western forecasts, may be attributed to 3 main considerations. First, the U.N. forces had air supremacy, and so not only denied the Iraqis aerial intelligence but were also able to strike at will any Iraqi ground targets. Second, Iraqi morale, unit cohesion, and combat effectiveness were lower than expected, partly due to the intensive air attacks they suffered throughout the war. Widespread desertions, of both officers and enlisted men, in many units seriously weakened Iraqi capacity to resist on the ground. Only elements of the Republican Guard and a few other scattered units offered anything like organized resistance, and Iraqi actions were hesitant and uncoordinated. The U.N. plan of attack made the most of both Iraqi weaknesses and Allied strengths, particularly enemy reconnaissance failure and shattered command structure. Third, the surprise achieved by coalition forces in the ground campaign completed the demoralization of Iraqi forces.

March 1991. Revolt and Civil Unrest in Iraq. Outside the largely unpopulated regions occupied by Allied troops, the authority of Saddam Hussein's Ba'athist government was

A.H.-64 Apache Helicopter in Saudi Arabia, 1991 (*U.S. Army photo*)

challenged by uncoordinated antigovernment factions among the Iraqi people. In the south and southeast, Iraqi Shi'ites gained control of Basra, An-Nasiriyah, and other cities before Iraqi army forces (including brigades from the 5th "Baghdad" Motorized Division of the Republican Guard) suppressed the uprisings and restored order. In the north, Kurdish rebels at first liberated most of Iraqi Kurdistan from government control. The Kurdish revolt was crushed by Republican Guard troops from Baghdad, plus forces from the Basra region after the Shi'ite uprising was crushed.

INTERNATIONAL PEACEKEEPING

The United Nations

1975–1984. United Nations Force in Cyprus (UNIFCYP). The U.N. Security Council maintained a peacekeeping force in Cyprus.

1975–1984. United Nations Emergency Force (UNEF) in Sinai. The U.N. Security Council continued to extend the mission of the UNEF in the Sinai until faced with the prospect of a Soviet veto. The Security Council voted (July 24, 1979) to eliminate this force, and to rely solely upon observers from the United Nations Truce Supervision Organization (UNTSO). (See pp. 1353.)

1975–1984. Golan Heights U.N. Disengagement Observer Force (UNDOF). The U.N. Security Council continued to deploy a peacekeeping force in the Golan Heights. (See p. 1354.)

1978, March 19. U.N. Peacekeeping in Lebanon. The U.N. Security Council passed a resolution (March 19) calling for Israeli troop withdrawal from southern Lebanon and their replacement with a United Nations Interim Force in Lebanon (UNIFIL). The UNIFIL troops began to replace the Israelis soon after the passage of the resolution (April) and have remained in Lebanon to date (1984). (See p. 1505.)

Other Peacekeeping

1975, July 30–August 2. Helsinki Security Conference. Representatives of 35 countries met in the Finnish capital to discuss security arrangements for Europe, including the sanctity of national borders, the free passage of citizens across national borders, exchange of information on military maneuvers, and human rights. The Helsinki Accord accepted by the conference was a political triumph for the Soviet Union. Although not a binding agreement, the Accord in effect ratified the existing boundaries of Europe and legitimized Soviet dominance of Eastern Europe. However, the human rights section of the agreement, clearly not being observed in the U.S.S.R., has become a significant political embarrassment to the U.S.S.R.

1975, July 22. OAU Arbitration Effort in Angola. The Organization of African Unity sent appeals to the warring factions in Angola (see p. 1539) calling for a cease-fire and asking them to send representatives to Kampala—where the OAU was holding its twelfth summit meeting. The appeal was unheeded. On the basis of a report by a special OAU commission (October 1–4) President **Idi Amin Dada** of Uganda, OAU chairman, recommended that an OAU peacekeeping force be sent to Angola (November 15). The Popular Movement for the Liberation of Angola (MPLA), the *de facto* government and one of the factions, cited the presence of South African troops in Angola as a basis for rejecting the OAU peacekeeping effort (December 18). Because of deadlock in an emergency meeting (January 10–13, 1976) no OAU actions were taken.

1977, August 5–9. OAU Attempts to Achieve Peace in Ogaden. The OAU's Border Mediation Committee called on Ethiopia and the Somalia-backed Ogaden rebels to stop fighting. There was no response to this by the

participants, or to a later mediation effort (February 9, 1978).

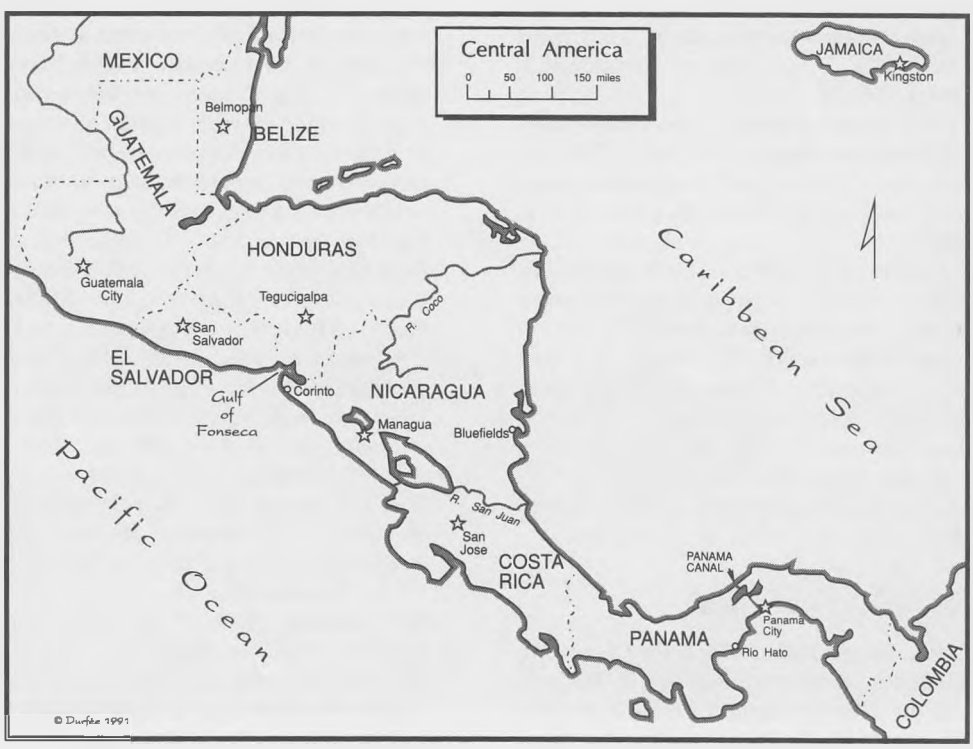
1979, March 2. Arab League Mediation of Yemen Conflict. The Arab League accepted a role as a mediator in the border conflicts of Yemen and South Yemen (see p. 1505).

1981, December 17–1982, June 30. OAU Peacekeeping Force in Chad. (See p. 1539.)

1982, August 26. OAU Offers Cease-Fire Plan in Moroccan-Sahara War. The OAU proposed a cease-fire plan which called for a bilateral withdrawal of belligerents and a referendum to decide the future of the Western Sahara. There was no response. (See p. 1548.)

1982, October 4. Proposal for Central America Peace Forum. The United States and 6 other American nations (Costa Rica, Belize, El Salvador, Honduras, Jamaica, and Colombia) agreed to a peace plan calling for (1) a "verifiable and reciprocal" regional treaty, banning arms supplies to warring factions, subversion of national governments, and foreign military advisers in any nation in the region; and (2) development of a "Peace Forum," in which regional states would work to assure democratic elections. The immediate objective of the plan was to end fighting between Honduras and Nicaragua and end internal hostilities in El Salvador and Nicaragua. It was rejected by Nicaragua because of the role of the U.S. in its formulation (November 3). (See p. 1562.)

1983, January 7–9. Contadora Group Peace Initiatives. In an effort to bring peace to Central America, the foreign ministers of 4 Latin American nations (Mexico, Panama, Venezuela, and Colombia) met on the Panamanian island of Contadora. There were no results from this or subsequent meetings (April 10–12 and July 17).



DISARMAMENT ACTIVITIES

1975–1984. The Geneva Conference on Disarmament. The Conference on Disarmament (founded in 1962 as the 18-Nation Disarmament Committee) continued to meet annually; China became the fortieth nation to join (1980). The Conference was attempting to negotiate a comprehensive ban on nuclear testing and on production and use of chemical weapons in warfare, and was negotiating a ban on development or production of radiological fissionable materials. The Soviet Union and the United States each prepared versions of a treaty for ban on chemical weapons (1984).

1975, March 26. Biological Weapons Ban Takes Effect. The 1972 Convention banning the production and stockpiling of biological and toxin weapons went into effect. There were subsequently charges that the Soviet Union and its ally Vietnam had violated this treaty and the earlier (1925) Geneva Protocol (see pp. 1493, 1526).

1979, June 18. SALT II Agreement Signed. U.S. President **Jimmy Carter** and Soviet President **Leonid Brezhnev,** in Vienna, Austria, signed a treaty designed to fill certain loopholes not covered by SALT I: to provide additional verification of compliance; to prohibit the deployment of mobile ICBMs or ALCMs (air-launched cruise missiles); and to prohibit flight testing of mobile ICBMs. The new treaty set limits on the numbers of warheads and on the numbers of launchers. Limits on new systems were also set by allowing only 1 new type of sea-based ICBM and 1 new type of land-based ICBM. Also the treaty prohibited the controversial Soviet "Backfire" bomber from increasing its radius of action, so it could not threaten the U.S. without refueling. American critics of the treaty charged that even with the limitations on warheads, the Soviets would have a sufficient number—when combined with their existing advantage in "throw weight" (explosive power) and improved accuracy—to threaten U.S. landbased missiles in the early 1980s. The critics also charged that the treaty was not verifiable, and that it would place the U.S. in a position of strategic inferiority without achieving strategic stability. Because of these criticisms the U.S. Senate refused to ratify the treaty. However, President Carter pledged to abide by its terms as long as the Soviets did likewise.

1979, December 12. NATO Proposes MNF Negotiations. The foreign and defense ministers of the member states of NATO agreed to deploy United States medium-range nuclear missiles to replace 1,000 obsolete U.S. tactical missiles which would be removed (see p. 1487). They also agreed that negotiations between the United States and the Soviet Union on the reduction of medium-range nuclear forces (MNF) should begin at the earliest possible date.

1981, September 30. Proposal for Nuclear Weapons "Freeze." Scientists from 40 countries at the 31st "Pugwash" meeting agreed that nuclear weapons should be frozen at current levels. This idea was picked up and became the basis for nuclear weapons "freeze" movements in many countries. Legislation was introduced into both houses of the U.S. Congress (May 4 and October 31, 1982).

1981, November 30. Medium-Range Nuclear Force Talks Begin. U.S. and Soviet negotiating teams met in Geneva to discuss reductions of medium-range nuclear forces (MNF) in Europe. The principal issue was the reduction or elimination of Soviet SS-20 missiles in the western U.S.S.R., and of U.S. Pershing II missiles and cruise missiles, which NATO planned to deploy in Western Europe. **Paul Nitze** was the chief U.S. negotiator; his Soviet counterpart was **Yuli A. Kvitsinsky.** In a so-called "zero based option," the U.S. offered not to deploy its planned missiles if the U.S.S.R. destroyed all of its SS-20s. One reason for Soviet rejection was that this would allow the U.K. and France to retain in their strategic deterrent forces some 167 missiles capable of reaching the U.S.S.R.

1982, March 16. Brezhnev Announces Freeze on SS-20 Deployment. Soviet leader Leonid Brezhnev announced that the Soviet Union was freezing MRBM forces at present levels and that some missiles would be dismantled. At that time the U.S.S.R. had about 280 SS-20 missiles deployed in the western U.S.S.R. The missiles to be dismantled were presumably older SS-4 and SS-5 missiles.

1982, May 31. START Talks Set to Begin; U.S. Adheres to SALT Treaties. The Soviet Union and the United States announced that the two superpowers had agreed to begin Strategic Arms Reduction Treaty (START) negotiations. U.S. President **Ronald Reagan** also asserted that the U.S. would continue to abide by the existing strategic arms treaties (SALT I and II) as long as the Soviet Union continued to honor those treaties.

1982, June 29. START Negotiations Begin. The chief of the U.S. negotiating team was retired Lieutenant General **Edward Rowny.** The Soviet team was headed by **Victor Karpov.**

1982, December 21. Andropov's MNF Proposal. New Soviet leader **Yuri Andropov** proposed to reduce the Soviet SS-20 force from 280 to 162 missiles, establishing parity with the missiles of the U.K. and France, in return for a U.S. commitment not to deploy the Pershings or cruise missiles in Europe. The U.S. refused to consider British and French missiles in bilateral talks, particularly since these were national deterrent strategic missiles, and not part of NATO's forces. The U.K. and France announced their refusal to have their missiles considered in bilateral talks. However, British Prime Minister **Margaret Thatcher** (January 18) and Germany's Premier **Helmut Kohl** (March 12) suggested that the U.S. retreat somewhat from its negotiating position (zero-based option) and make a counterproposal to break the impasse.

1983, March 29–30. U.S. and NATO's Interim MRBM Solution. In response to the urging of NATO allies, President Reagan offered an alternative to the U.S. zero-based option plan on the reduction of medium-range ballistic missiles: he called for equality in warheads between the two superpowers. Reagan pointed out that the Andropov plan (see above), with 162 SS-20 missiles, would still leave the U.S.S.R. with 486 warheads because each SS-20 carried three warheads. The Soviet negotiating team subsequently rejected the Interim Solution (June 24).

1983, November 23. Soviet Walkout from MNF Talks. In protest of the NATO deployment of the first medium-range missiles in West Germany and England (see pp. 1487, 1491) the Soviet negotiators withdrew from the negotiations in Geneva. Also the Soviet negotiators at both the START (Strategic Arms Reduction Treaty) and the MBFR (Mutual Balanced Force Reductions) negotiations used the deployment as a reason for halting negotiations.

1984, January 23. United States Alleges Soviet SALT and Geneva Violations. President Reagan presented to the U.S. Congress charges of Soviet violations of the Interim SALT Agreement and the unratified SALT II Treaty. He also charged violations of the 1925 Geneva Protocol and 1972 Geneva Convention by production and stockpiling of biological weapons. The U.S.S.R. promptly countered with its own list of U.S. violations.

WESTERN EUROPE

Western European Defense Arrangements: NATO, 1975–1983

1977, June 9. Soviet SS-20 Missile Deployment Reported to NATO. NATO Secretary General **Joseph Luns** reported that NATO intelligence had determined that the Soviet Union had deployed SS-20 MRBMs in the western regions of the Soviet Union. The SS-20 had 3 warheads and a 5,000-kilometer range.

The NATO countries of Western Europe were all within the range of the SS-20.

1979, December 11–12. NATO Decides to Deploy MRBMs. Meeting in Brussels the NATO foreign ministers agreed to deploy 108 Pershing II IRBMs and 464 land-based cruise missiles in Western Europe to counter the Soviet deployment of SS-20 MRBMs. At the same time it was agreed that the U.S. would pursue negotiations with the Soviets on the reduction of medium-range nuclear missiles in Europe. This "two track" approach became the basis for subsequent NATO and U.S. negotiating positions regarding the reduction of medium-range nuclear forces in Europe (see p. 1485).

1975–1983. Mutual Balanced Force Reduction (MBFR) Talks. The NATO countries and the Warsaw Pact countries continued MBFR negotiations, but no real progress was made in reaching agreement on the reduction of the size of the conventional forces that each alliance has deployed in Europe. The major problem was the inability of the participants to agree on the strength of ground forces deployed by the Warsaw Pact. NATO estimates of Warsaw Pact troop strength were consistently higher than that acknowledged by the Warsaw Pact.

1981–1983. Western European Disarmament Movement. There were numerous large-scale disarmament protests in England, the Netherlands, and West Germany against the impending installation of Pershing II and cruise missiles in Western Europe.

1983, November 22–28. NATO Begins Deploying MRBMs. The first Pershing IIs and land-based cruise missiles were deployed in NATO member countries England and the Federal Republic of Germany.

1989, April 20. NATO Debates Modernizing Short-Range Missiles. The U.S. and the U.K. had argued that the current missiles needed to be upgraded. In a concession to West German Chancellor **Helmut Kohl,** who was under public pressure to oppose the modernization, it was agreed to defer a decision on the matter.

1990, May 3. Agreements on Reunified Germany. Following reunification, Germany was to retain full membership in NATO. Soviet troops would be allowed to stay in East Germany; no Western troops would be stationed there. In addition, Germany was not allowed to possess its own nuclear, chemical, or biological weapons, and the German armed forces were limited in size.

1990, November 19. NATO and Warsaw Pact Leaders Sign CFE Treaty. The treaty limited each alliance to 20,000 tanks, 20,000 artillery guns, 30,000 armored vehicles, 6,800 combat aircraft, and 2,000 attack helicopters.

United Kingdom

1975–1984. Continuing Civil War in Northern Ireland. Despite the deployment of substantial British Army forces in the area, violence, bloodshed, and property destruction plagued Northern Ireland, spilling over into the Irish Republic and Great Britain. The hatred and intransigence of both radical Protestants and the outlawed Irish Republican Army (IRA) prevented any compromise. Authorities of the U.K. and the Irish Republic agreed to punish political terrorists on either side of the border between Northern Ireland and the Republic of Ireland. Most notable incidents were the assassinations of the British ambassador to Ireland and his secretary (July 21, 1976) and of Lord Mountbatten of Burma (August 27, 1979).

1975, November 17. "Cod War" with Iceland. Following expiration of a 2-year interim fishing agreement between the United Kingdom and Iceland, harassment of British fishermen was begun by Icelandic Coast Guard vessels within Iceland's declared 200-mile territorial limit. Three British frigates were dispatched to Icelandic waters (November 24). Iceland closed its ports and airports to British traffic. Following mediation by NATO Secretary General Joseph Luns, the British frigates withdrew (January 19, 1976). Continued clashes led the British to send 2 frigates back into the fishing area (February 5). Diplomatic relations were severed (February 19). However, negotiations continued. As a result of

M1A1 Tank in Saudi Arabia, 1991 (*U.S. Army photo*)

agreement on British fishing rights, the British warships withdrew (May 30). The agreement was signed (June 1) and diplomatic relations were restored (June 3, 1976).

1982, January. Dispute with Argentina on Falklands Issue. *La Prensa,* a major Buenos Aires newspaper, reported that Argentine General **Leopoldo Galtieri,** President and leader of the ruling junta, had pledged to return the Falkland Islands—called the Malvinas by the Argentinians—to Argentine control by January 1, 1983. The history of the Falkland/Malvinas dispute between Argentina and Britain can be summarized as follows: In 1829 the first Argentinian settlers arrived at the Falklands but found British settlers already on the islands. Clashes between British and Argentinian settlers led to the establishment of a British administration over the islands in 1833. Argentinian settlers were expelled. Although Argentina did not attempt to establish any more settlements, it never relinquished its claim. More recently (July 1, 1971) the two countries agreed to settle their dispute by negotiations (see p. 1464). These efforts were unsuccessful (see Argentina, p. 1564).

1982, March 19. South Georgia Incident. A crew of Argentinian workers landed at Leith in South Georgia (part of the Falklands colony) to salvage scrap metal from 3 abandoned whaling stations. Britain sent a diplomatic protest alleging that the crew had illegally entered British territory. Argentina sent 5 warships to the area and issued a communiqué asserting that Argentinian workers did not need permission from the British to be on native soil. The British Foreign Minister informed Parliament that a potentially dangerous situation prevailed in the Falklands (March 30).

1982, April 2–June 14. Falkland Islands War. (See p. 1471.)

1984, April 17. Shooting Incident at the Libyan Embassy. During a demonstration by Libyans opposed to Libyan ruler Muammar Qaddafi, a burst of machine-gun fire from the Libyan embassy in London killed a British policewoman and wounded 10 demonstrators. In response, Britain cut off diplomatic relations with Libya (April 30.)

1984, October 12. IRA Attempts to Assassinate Prime Minister. A hotel in Brighton, site of the annual conference of the Conservative Party was bombed. A member of Parliament and 3 others were killed, 32 were injured. Prime Minister **Margaret Thatcher** had left the building just prior to the explosion.

1985, February 20. Britain Endorses Strategic Defense Initiative. In an address to the U.S. Congress, Prime Minister Thatcher backed the Reagan plan, citing the Soviet return to arms negotiations as a rationale for a continued Western arms build-up. (See p. 1552.)

1985, November 15. Agreement on Northern Ireland. Great Britain and the Republic of Ireland signed an accord that gave the Republic a formal consultative role in the governance of Northern Ireland.

1988, March. Irish-British Violence. A British SAS anti-terrorist team in Gibralter killed 3 unarmed IRA men who had been planning a bomb attack (March 6). At the funeral of the men in Belfast, a Protestant gunman killed 3 and injured dozens (March 16). At the funeral of one of the 3 killed in Belfast, 2 British soldiers drove into the funeral procession by mistake, and were beaten and shot to death (March 19).

1988. IRA Bombings. Six British soldiers were killed in Northern Ireland by a bomb placed in their car (June 15). A bomb in a bus killed 8 British soldiers and injured 28 other civilians in Belfast (August 20).

The Netherlands

1981, February 28. Dutch Parliament Approves the Deployment of MRBMs. The Dutch Parliament voted to permit deployment of U.S. medium-range cruise missiles and Pershing II missiles on Dutch soil as part of NATO's deterrent.

France

1975, March 4–December 15. French Military Personnel Unrest. Public protest marches by French military draftees led to a substantial pay increase. Later the French govern ment established a new and relaxed code of discipline (July 16). However, unrest continued. Army units attempted to form unions (November 3 and 4 and December 9). Following an inquiry, ringleaders were arrested (December 15).

1975, April 13. French Intervention in Chad. **(See p. 1538.)**

1975–1977, French Activity in Afars and Issas. **(See p. 1535.)**

1976, February 4. French-Somali Troops Clash.

1978, May 19. French Intervention in Zaire.

1978–1983. French Interventions in Chad. **(See p. 1538.)**

1980, June 26. French Announce Neutron Bomb Test. French President **Valéry Giscard d'Estaing** announced that France had tested enhanced radiation weapons (the so-called "neutron bomb") in the South Pacific. The decision on whether or not to deploy it would be deferred until a later date.

1982–1984. French Peacekeeping Contingent in Beirut. **(See pp. 1476, 1505–1509.)**

1982, October 7. Nuclear Force Modernization Plan Announced. French Defense Minister **Charles Hernu** said that France intended to give "absolute priority" to the development of improved nuclear capability and that conventional ground forces would be cut 10 percent. This plan subsequently drew fire from French military leaders. General **Jean Delaunay** (Army Chief of Staff) protested that Hernu's plan would reduce the French Army by more than 30,000 men and that reduced spending on conventional forces would result in equipment obsolescence. French Air Force

officials also complained that the French Air Force would lose 3,000 badly needed combat aircraft. French Foreign Minister **Claude Cheysson** defended Hernu's plan, asserting that the basis of effective deterrence is nuclear forces. Hernu also answered the critics by saying that conventional capabilities would be increased through a "rapid action and assistance command" able to intervene quickly in any European conflict. He also pointed out that the plan contemplated construction of a nuclear-powered aircraft carrier, a nuclear-powered submarine, and 3 hunter-killer submarines.

1983, May 18. France Supports NATO MNF Deployment. French President **François Mitterand** and German Chancellor Helmut Kohl formally announced support for the scheduled deployment of Pershing and cruise missiles in Western Europe. Mitterand reaffirmed this position at a meeting of NATO's Atlantic Council (June 10), while also reaffirming retention of the French *force de frappe* (independent nuclear deterrence force).

1983, October 23. Suicide Attack on French Peacekeeping Force in Lebanon. (See p. 1508.)

1983, November 8. French Catholic Bishops Support Concept of Deterrence. In a position differing from that of American Catholic bishops (see p. 1552), the French bishops issued a pastoral letter defending nuclear deterrence as being consistent with the Just War doctrine of the Catholic Church. Rejecting pacifism, the French bishops stated that the argument for peace at any price would lead to a situation in which the West would not have the means to defend itself, and would only serve to encourage aggression.

1984, November 10. French Agree to Withdraw Troops from Chad. France later announced (November 16) that its reconnaissance flights over Chad would continue as Libya had failed to withdraw its troops. In addition, 1,200 French troops would remain in Chad.

1985, May 4. French President François Mitterrand Announces Opposition to Strategic Defense Iniatiative Research.

1985, July 10. Sinking of Greenpeace Ship. The ship, the *Rainbow Warrior*, was sunk by French Secret Service agents while at anchor in Auckland, New Zealand. A photographer aboard was killed. The ship was preparing for a protest trip to French nuclear test facilities in the South Pacific. France admitted its complicity in the sinking (September 22). Two French agents were captured by New Zealand police, pled guilty to manslaughter, and were sentenced to 10 years in prison (November 4).

1988, May 5. French Commandos Free Hostages on New Caledonia. Melanesian separatists had held 23 French hostages for 2 weeks; all the hostages were released, 2 commandos and 19 Melanesians were killed.

West Germany

1979, June 7. Schmidt Warns of Dangers of Soviet Missiles. In a speech at Harvard University's commencement exercises, German Chancellor **Helmut Schmidt** warned that NATO must respond to the Soviet deployment of the SS-20 medium-range ballistic missiles (MRBMs).

1981, May 17. Schmidt Threatens Resignation over MNF Deployments. Defying the opposition of his Social Democratic Party (SPD), Chancellor Schmidt threatened to resign if the party failed to support his approval of the deployment of U.S. medium-range nuclear missiles in Germany as part of the NATO deterrent.

1981, May 26. German Parliament Approves Deployment of Pershing and Cruise Missiles. Despite opposition in his own party, Schmidt won parliamentary approval for the deployment of U.S. cruise missiles and Pershing IIs in West Germany as part of the NATO tactical nuclear force.

1983, April 18. West German Bishops Issue Pastoral Letter on War and Peace. The Roman Catholic bishops of West Germany issued a pastoral letter strongly endorsing nuclear deterrence as a necessary but regrettable means of keeping the peace.

1983, July 4–7. Kohl Negotiates with Soviets about MNF Deployment and Reduc-

tions. German Chancellor **Helmut Kohl** unsuccessfully attempted to persuade Soviet leaders to reconsider their position at the MNF (medium-range nuclear force) reduction talks in Geneva and to accept the NATO interim reduction plan. Later, Soviet Premier **Nikolai Tikhonov** warned that if the West German parliament did not reverse its position on the MNF deployment, the Soviet Union would have to deploy additional missiles and that in the event of war, West Germany would suffer devastation.

1983, November 22, West German Parliament Votes Approval of MRBMs. The West German Bundestag voted to permit the scheduled deployment of U.S. medium-range ballistic missiles on West German soil. This vote assured the Soviet walkout from the Geneva negotiations on MNF reduction. (See p. 1486.)

1985, December 18. Agreement on Strategic Defense Iniatiative. German industry was to participate in the development of technologies for the program.

Sweden

1981, October 27–November 6. Soviet Submarine Grounded in Swedish Territorial Waters. (See p. 1493.)

Denmark

1983, December 1. Danish Parliament Opposes MNF Deployment. The Danish Parliament voted against NATO deployment of U.S. Pershing IIs and ground-launched cruise missiles in Denmark (December 1). Subsequently, Parliament voted to withhold from NATO funds that were to be allocated for deployment of the missiles (December 7).

Italy

1981–1982, December 17–January 28. American General Held Hostage by Terrorists. Brigadier General **James L. Dozier** was seized in his Verona apartment (December 17) and held by terrorists for 42 days. After an extensive search a special Italian police Anti-Terrorist Task Force stormed the building where Dozier was being held and rescued him.

1982–1984. Italian Peacekeeping Contingent in Beirut. (See pp. 1476, 1505–1509.)

1983, March 30. Italy Backs Medium-Range Missile Deployment. The Italian government endorsed the U.S.-NATO interim solution on the reduction of medium-range nuclear missile forces in Europe. The Italians later specifically endorsed deployment of Pershing IIs and ground-launched cruise missiles (May 29).

Spain

1975. Spanish Withdrawal from Rio de Oro. (See p. 1548.)

1975, November 22. Restoration of Spanish Monarchy. After the death of Generalissimo Francisco Franco, his protégé, **Juan Carlos de Borbón,** was proclaimed king. Almost immediately he began to change Spain into a parliamentary democracy.

1979–1983. Terrorism by Basque Separatists. Terrorism by radical Basque separatists increased in frequency and intensity. Spanish military officers became targets of many attacks. A home-rule bill sponsored by King Juan Carlos was approved by Basque voters in a popular referendum (October 25, 1980). The radicals, however, wanted total independence and continued their violence. The government deployed troops in the Basque region (March 23, 1981). Violence and defiance continued both in the Basque provinces and in other parts of Spain.

1981, February 23. Attempted Coup. Dissatisfaction with Spain's parliamentary democracy led to an attempt by senior military officers to seize power and overthrow the government. One conspirator led civil guards in seizing and holding hostage the cabinet and 350 members of the lower house of the legislature. The commander in Valencia declared martial law, while a principal military adviser to the King, General **Alfonso Armada Comyn,** urged the King to seize control and establish military rule. Juan Carlos refused, and by telephone calls and a radio address persuaded the army to remain loyal to the government. The conspirators surrendered and were arrested (February 24–26).

They were later tried by court-martial and sentenced to prison terms.

1982, May 30. Spain Enters NATO. Following the approval of each NATO member nation, Spain became the sixteenth member of the alliance.

1982, October 2. Coup Foiled. Spanish authorities loyal to the King and the democratic regime discovered plans for a coup to take place just before the national elections scheduled for October 27. Three senior officers were arrested.

1983, February 24. Base Protocol with the United States. Spain and the U.S. signed an agreement which permitted the U.S. to retain its bases in Spain.

1983, June 2. Spain Declines to Sign Medium-Range Missile Deployment Agreement. The Spanish government rejected a NATO agreement permitting future deployment of Pershing II and ground-launched cruise missiles on Spanish soil.

1986, March 12. Spain to Stay in NATO. Voters supported the government in a referendum which stipulated that there would be no nuclear weapons in Spain. Spanish armed forces were to remain outside the NATO unified command structure, and U.S. troop levels in Spain would be reduced below 12,500.

Portugal

1975. Portuguese Mediation in Angola. **(See p. 1539.)**

1975, March 11. Rightist Coup Fails. Troops loyal to the ruling Armed Forces Movement (MFA) thwarted a coup attempt. Former provisional President General Antonio de Spinola was accused of leading the coup but denied complicity.

1975, November 25–28. Leftist Coup Fails. Following more than a month of political unrest, military and civilian leftists attempted to overthrow the new moderate government of Vice Admiral **José Pinheiro de Azevedo.** Rebellious air force troops seized 4 air bases, the Air Force Command Center, and the national radio and television stations. Army commandos suppressed the revolt in hard fighting.

1982, August 12. Council of Revolution Eliminated. The transition from military to civilian rule was completed when the Portuguese Parliament voted the Revolutionary Council out of existence.

Soviet Union

1975–1983. Soviet Military Advisers in Africa, Asia, and Latin America. The Soviet Union gave military and technical aid and sent military advisers to a number of Third World countries (see Cuba, Angola, Ethiopia, South Yemen, Yemen, Afghanistan). In addition to military advisers in client nations, the Soviets were able to project power by greatly upgrading their naval capabilities and obtaining naval and air base rights at a number of strategically located areas around the world including Cuba and Vietnam.

1976, December 26. Soviets Strive for Strategic Nuclear Superiority. The *New York Times* reported that the CIA's latest national intelligence estimate (NIE) was far more pessimistic than in preceding years. The estimates indicated that the U.S.S.R. was trying to achieve strategic superiority.

1977, September 26. Soviet–Warsaw Pact Ground Force Troop Strength Increase Reported. Newspaper reports asserted that in 10 years the U.S.S.R. had increased its ground forces by 30 divisions, to a total strength of 170 divisions.

1979, May 30. Soviet Union Purportedly Seeks First-Strike Capability. United States Secretary of Defense **Harold Brown** speaking at the U.S. Naval Academy in Annapolis, Md., declared that the Soviets were seeking to develop a "first-strike" capability. This would be an ability to destroy all U.S. retaliatory capabilities in one preemptive strike.

1979, December 17. Mission of Soviet Navy Enlarged to Include Global Role. U.S. Navy specialists asserted that the Soviet Union was building a navy with the capability of projecting Soviet power anywhere on the globe. This buildup was being performed under the direc-

tion of Admiral **Sergey G. Gorshkov,** chief of the Soviet Navy.

1979, December 25–28. Soviets Invade Afghanistan. **(See p. 1519.)**

1980, January 3. Soviet Union Rejects MNF Talks with NATO. The Soviets rejected a NATO offer to negotiate the reduction of MRBMs. They claimed that the NATO decision (December 12, 1979) to deploy new Pershing II and ground-launched cruise missiles "destroyed the basis for negotiation" (see p. 1485).

1980, March 20. Soviets Deny Biological Weapons Violation. The Soviets denied that an anthrax epidemic (April 1979) in the city of Sverdlosk was due to an accident that occurred in the manufacture of biological weapons.

1980, April 18. Soviets Test-Launch Killer Satellite. The Soviets launched a killer satellite, Cosmos 1174. The target, Cosmos 1171, had been launched earlier (April 3).

1980, September 18. Reported Improvement in Strategic and ABM Capabilities. London's International Institute for Strategic Studies (I.I.S.S.) reported that Soviet ICBMs were now "significantly more accurate" than earlier generation missiles, thus weakening U.S. deterrence. U.S. intelligence sources had also ascertained that the Soviets had improved their ABM capabilities with a phased-array radar to direct interceptor rockets. The U.S. government did not consider this to be a violation of SALT I because each side was allowed 1 ABM site under the terms of the treaty.

1980, October 2. *Kirov* Guided Missile Cruiser in Service. The nuclear-powered guided missile cruiser *Kirov* was reported in active service, giving the Soviet Union substantially increased offensive and defensive strategic naval capability.

1981, January 9. Soviets Launch New Attack Submarine. The new submarine class, called *Oscar* by U.S. Naval Intelligence, was 10,000 tons and could attain speeds up to 40 knots.

1981, September 23. Soviet MNF Superiority Reported. London's I.I.S.S. reported that the U.S.S.R. had more than 3 times as many warheads in their MNF than did NATO.

1981, September 29. Soviet Military Capabilities Enhanced Through Technology Transfers. A U.S. Defense Department booklet on Soviet military capabilities reported that the Soviet Union had used a variety of means, legal and illegal, to acquire Western technology to improve military capabilities.

1981, October 27–November 6. Soviet Submarine Grounded in Swedish Territorial Waters. A Soviet submarine ran aground near the Karlskrona Naval Base. The U.S.S.R. maintained this was due to poor weather and faulty navigational equipment, but this explanation was rejected by Sweden. Swedish investigation discovered radiation near the submarine's torpedo tubes. Sweden pointed out that this was incompatible with Soviet efforts to persuade Sweden to agree that Scandinavia and the Baltic should be a nuclear-free zone. The Soviets insisted there was no radiation in the submarine.

1983, September 1. Soviets Down Korean Commercial Aircraft. Soviet pilots shot down Korean Air Lines plane Flight 007 near Sakhalin Island. The plane bound for Seoul had apparently strayed off course. After tracking the plane for several hours a Soviet aircraft shot down the plane with a missile, killing all 269 passengers and crew.

1983, November 23. Soviets Walk Out from MRBM (MNF) Reduction Talks. **(See p. 1486.)**

1983, December 8. START Talks Recess without Resumption Date. **(See p. 1486.)**

1983, December 15. MBFR Talks Adjourn without Setting New Date. **(See p. 1486.)**

1984, February 9. Death of Andropov. Soviet Communist Party General Secretary **Yuri V. Andropov** died after 15 months in power. **Konstatin U. Chernenko** was chosen by the Politburo to replace him.

1984, March 16. Talks on Reduction of Conventional Forces in Europe Resumed in Vienna.

1984, May 20. U.S.S.R. Reports More Armed Submarines Are Deployed off U.S. Coast. Marshal **Dmitri Ustinov,** Soviet defense minister, said that the deployment was in response

to the deployment of U.S. intermediate-range nuclear missiles in Europe.

1985, January 7–8. Agreement on Resumption of Arms Talks. U.S. Secretary of State **George Schultz** and Soviet Foreign Minister **Andrei Gromyko,** meeting in Geneva, agreed to resume negotiations on the reduction of nuclear arms.

1985, March 10. Death of Chernenko. Mikhail Gorbachev was chosen by the Politburo as his successor.

1985, March 12. U.S.-Soviet Arms Talks Begin. The two countries agreed to divide the negotiations into subgroups to deal with strategic nuclear weapons, intermediate-range nuclear weapons, and space weapons.

1985, March 25. Russian Guard Kills U.S. Officer. U.S. Army Major **Arthur Nicholson, Jr.,** was shot while observing Soviet tank facilities near Ludwigslust, East Germany. Soviet claims that he was in a prohibited area were rejected by the U.S. Nicholson was assigned to a military liaison unit in East Germany observing military activities as provided for in post–World War II agreements.

1985, April 7. Gorbachev Proclaims Missile Moratorium. The Soviet leader announced that the U.S.S.R. would cease to deploy intermediate-range nuclear missiles. The U.S. refused to enact a similar freeze, citing the 10:1 Soviet advantage in such missiles.

1986, January 15. Gorbachev Calls for World Ban on Nuclear Weapons. He announced a 3-month extension of the Soviet moratorium on nuclear tests and proposed a worldwide ban on nuclear weapons by the year 2000.

1986, April 25. Explosion at Chernobyl Nuclear Power Plant. The explosion and subsequent fire released massive quantities of radioactive material over the Ukraine, as well as much of the Soviet Union and Europe.

1986, October 11–12. Reagan and Gorbachev Meet in Iceland. Although they came close to major agreements on arms control issues, the opportunity for a comprehensive settlement was lost over Soviet opposition to the U.S. Strategic Defense Initiative (SDI or "Star Wars").

1987, December 8. INF Treaty Signed. The treaty provided for the dismantling of all 1,752 U.S. and 859 Soviet intermediate-range nuclear missles with a range of 300 to 3,400 miles. The Warsaw Pact endorsed the treaty as well (December 11).

1988, January 7. Soviets Announce Withdrawal from Afghanistan. The withdrawal was to begin when an agreement was reached at U.S.-sponsored talks between the Soviet Union and Afghan rebels. It was later announced (February 8) that the withdrawal was to begin on May 15 and be completed within 10 months, provided that a settlement was reached with Afghan rebels.

1988, February–March. Unrest in Azerbaijan. Christian-Moslem hostilities resulted in the deaths of 31 (Armenian sources claimed that over 300 were killed) in Sumgait, Soviet Republic of Azerbaijan (February 28). Armenian Christians had been demanding that the Nagorno-Karabakh region of Azerbaijan be reunited with the Soviet Republic of Armenia. When the Soviet Presidium rejected Armenian reunification (March 23) there were violent protests in Armenia. Soviet troops and secret police were sent to Yerevan, the Armenian capital, to prevent planned demonstrations.

1988, April 14. U.S.S.R. Signs Agreement on Afghan Pullout. The withdrawal began as scheduled (May 15).

1988, October 1. President Gorbachev. Implementing reforms initiated earlier (June) Gorbachev was named Soviet President by the Supreme Soviet.

1988, November 16. Estonia Challenges Soviet Control. The Supreme Soviet of Estonia asserted the right to veto national laws affecting Estonia. The Presidium of the U.S.S.R. declared the action unconstitutional (November 26). Gorbachev deplored the disastrous rise of nationalism within the U.S.S.R. (November 27).

1988, December 7. Gorbachev Announces Unilateral Conventional Force Reduction. At the U.N. he announced that the Soviet armed forces would be cut by 10 percent, about 500,000 men. Some 10,000 tanks, 8,500 artillery guns, and 800 aircraft would be withdrawn from Eastern Europe.

1989, February 15. Soviets Complete Afghan Pullout. Soviet losses in the war were given as 15,000 killed and 37,000 wounded.

1989, April 9. Soviet Troops Use Poison Gas to Suppress Riot in Georgia. An unknown number of demonstrators in Tbilisi were killed. The Soviet Foreign Ministry claimed that only tear gas had been used, but *Izvestia* reported that a number of people had died from "chemical agents." Georgian toxicologists confirmed that nerve gases had been used.

1989, June 3–10. Ethnic Unrest in Uzbekistan. Bloody clashes erupted between Sunni Moslem Uzbeks and Shiite Moslem Meskhetians. At least 90 were killed and more than 1,000 injured.

1989, August 23. Baltic Republics Denounce 1939 Hitler-Stalin Pact. The Lithuanian Popular Front called for complete independence from the Soviet Union.

1989, September. Nationalist Unrest Continues. Ukrainian nationalists called for the transformation of the Soviet Union into a confederation of autonomous republics (September 8–10). Gorbachev warned leaders of Armenia and Azerbaijan to negotiate an end to their hostilities, and tensions appeared to ease (September 25).

1989, November 27. Denunciation of Lithuanian Independence. The Soviet Politburo condemned Lithuania's move toward greater freedom.

1990, January. Rioting in Azerbaijan. Demonstrators destroyed border stations along the Soviet-Iranian border. President Gorbachev ordered the airlift of 11,000 troops into the region (January 13–14). Entering Baku with tanks and armored personnel carriers, Soviet forces killed at least 93 Azerbaijanis (January 20–25).

1990, February 12. Riots in Dushanbe, Soviet Republic of Tadzhikistan. The death toll was reported as 18.

1990, March 11. Soviet Troops Begin Withdrawal from Hungary. All forces were to be out by July 1991.

1990, March 11. Lithuania Declares Independence. President Gorbachev called the move illegitimate and invalid and warned of possible military action. Soviet paratroops seized the headquarters of the Lithuanian Communist Party in Vilnius (March 25–27). The Soviet government initiated an economic embargo of Lithuania, including cutoff of all oil and natural gas supplies (April 19).

1990, May 4. Latvia Declares Independence. President Gorbachev declared that the Baltic independence movements had no legal basis.

1990, May 27. Further Unrest in Armenia. Soviet troops in Yerevan killed 6 allegedly armed civilians. In the resulting riots, 23 were killed.

1990, June 4–13. Unrest in Kirghizia. Clashes between Uzbeks and Kirghiz left 148 dead. Soviet officials declared a state of emergency.

1990, June 29. Lithuania Places a Moratorium on Independence. The action by the Lithuanian Parliament resulted in the end of the Soviet embargos (July 2).

Albania

1990, June 28. Opposition Clashes with Security Police. Demonstrators sought refuge in foreign embassies. France and Italy evacuated 4,500 refugees after the government gave permission for mass emigrations.

1990, December 9. Antigovernment Protests. Students clashed with police in Tirana. The government announced the legalization of independent political parties (December 11).

Bulgaria

1990, January 5. Ethnic Strife. The government's cancellation of programs designed to force the assimilation of ethnic Turks was denounced by Bulgarian nationalists. Tension was relieved by a compromise that allowed freedom of religion and the use of Turkish or Slavic personal names. Bulgarian was declared the national language and display of foreign (i.e., Turkish) flags was forbidden.

1990, January 15. Repudiation of Communist Domination. The National Assembly unanimously revoked the constitutional provisions guaranteeing the Communists control of politics and government.

1990, August 26. Anti-Communist Riots. The headquarters of the Socialist Party (formerly Communist Party) in Sofia was set on fire.

Czechoslovakia

1989, November–December. Political Upheaval. The Communist Party leadership resigned following 8 days of antigovernment demonstrations (November 24). The new leadership agreed to give up the Communist monopoly on power (November 28). Continuing demonstrations led to the resignation of President **Gustav Husak** (December 10). **Alexander Dubcek,** Czech leader during the "Prague Spring" of 1968, was unanimously elected chairman of Parliament (December 28) and **Vaclav Havel,** a noted dissident, was elected President (December 29).

1990, 26 February. Withdrawal of Soviet Troops. Under terms of an agreement with the Czech government, Soviet troops began a withdrawal from Czechoslovakia.

East Germany

1989, January–October. Refugees Create Tension. By June, 44,263 East Germans had emigrated to the West, mostly via the newly-opened Hungarian border (see below). The East German government filed a diplomatic protest, but the Soviet Foreign Ministry refused to intervene (September 12). Following mass demonstrations against the government in Leipzig and other East German cities, the East German Communist Party ousted leader Erich Honecker (October 18).

1989, November 7. Fall of the East German Government. Premier **Willi Stoph** and his cabinet resigned under opposition pressure; the following day most of the Politburo also resigned. Virtually all restrictions on travel to the West were removed (November 9). Demands were made by the opposition for the dissolution of the Communist Party and for the reunification of East and West Germany (December 3).

1989, December 22. End of the Berlin Wall. The dismantling of the wall and other obstacles along the intra-German border began.

1990, September 20. Reunification Treaty Ratified by East and West Germany.

1990, October 3. Reunification of East and West Germany. Berlin was designated as the new capital, although for the time being most government offices remained in Bonn.

Hungary

1989, May 2. Hungary Dismantles Border. With the removal of a 150-mile-long barbed-wire fence, Hungary became the first Eastern European country to open a border with the West.

1989, June 16. Imre Nagy Honored. With government approval, a memorial service was held for Nagy and others executed after the 1956 revolt was crushed.

1989, October 19. Opposition Parties Sanctioned. Parliament voted overwhelmingly to legalize opposition parties, ending one-party Communist rule. Stalinist laws were eliminated from the constitution, and the official name of the country was changed to the Republic of Hungary, deleting the word People's from the title.

1990, March 11. Soviet Troops Begin Withdrawal. By agreement with the Hungarian government, all Soviet troops were to be withdrawn from Hungary.

1990, June 26. Parliament Votes to Withdraw from Warsaw Pact.

Poland

1980–1981. Labor Unrest in Poland. Months of labor unrest and strikes led to the establishment of a national labor union, Solidarity, reluctantly accepted by the Polish government to avoid increased violence (August 30, 1980). However, unrest continued.

1981, February 9. Military Government Installed. The inability of the civilian government to restore stability led the Communist Party, presumably to forestall Soviet military intervention, to install the defense minister,

General **Wojciech Jaruzelski,** as Prime Minister. Despite strong military leadership and repressive measures, unrest continued throughout the country.

1981, September 4–11. Soviets Conduct War Games near Polish Border. Over 100,000 Soviet troops participated in combat exercises near the Polish border in violation of the Helsinki Accord (see International Peacekeeping, p. 1483) since the Soviets did not reveal the number of troops involved in the games until the U.S. accused them of the violation. The size and timing of the war games, coinciding with the Polish Solidarity national congress, led observers to believe that this was intended to intimidate the Poles.

1981, October 18. Jaruzelski Becomes Head of Polish Communist Party. In an attempt to strengthen the hand of the government, the Polish Communist Party appointed General Jaruzelski as First Secretary of the Polish Communist Party.

1981, December 13. Jaruzelski Imposes Martial Law. Worsening conditions in Poland and the continuing threat of armed Soviet intervention led Jaruzelski to impose martial law. Restrictions on civil and personal liberties were directed particularly against the activities of the Solidarity labor movement.

1982, March 13. Warsaw Pact Military Maneuvers in Northern Poland. The Soviet Union, Poland, and East Germany conducted Warsaw Pact military exercises in northern Poland. These exercises were again seen as an attempt to intimidate the Poles, who were restive under martial law, which had been imposed 3 months earlier (December 13).

1983, July 21–23. End of Martial Law in Poland. General Jaruzelski announced the end of 19 months of martial law (July 21) effective noon the next day. However, living conditions did not improve, since a number of harsh and oppressive laws were left intact.

1989, June 4. Communists Lose Election. The Communists were soundly defeated, and 99 of 100 seats in the Senate went to Solidarity-sponsored candidates. In the lower house, the Sejm, Solidarity won all 161 seats allotted to opposition candidates. Of 299 seats reserved for Communists, voters rejected most of the party-sponsored candidates, voting instead for reformers within the party.

1989, August 14. Communists Unable to Form Government. The Communist Party candidate for premier, General Czeslaw Kiszack, was unable to form a government. An agreement between Jaruzelski and Walesa led to the selection of Solidarity member **Tadeusz Mazowiecki** as premier. The U.S.S.R. announced acceptance of the change in regime, the first time that power had passed from a ruling Communist Party by democratic means in Eastern Europe.

1990, May 27. Local Elections. Solidarity-backed candidates won more than 40 percent of seats, Social Democrats (formerly the United Workers Party, or Communists) won 2 percent.

1990, December 9. Walesa Elected President.

Romania

1989, 20 November. Ceausescu Rejects Reform. The Communist Party President vowed that Romania would never abandon socialism so long as he remained in power. Unenthusiastic crowds were forced by police and armed forces to carry signs supportive of the government while listening to the speech.

1989, December. Fall of Ceausescu. Following the indiscriminate killing of protestors by government security forces in Timisoara (Temesvar) (December 20–22), President Ceausescu fled Bucharest as fighting broke out between security forces and the opposition, which was supported by elements of the army. Ceausescu was captured (December 23), tried, convicted of genocide and gross abuses of power, and executed with his wife (December 25). An interim government was formed under **Ion Iliescu** amidst continuing resistance by security forces (December 25–31).

1990, May 19–20. Ethnic Unrest. Romanians clashed with ethnic Hungarians in Tirgu-Mures, in Transylvania. At least 3 were killed before the interim government sent in 500 troops to restore order.

1990, December 14. Antigovernment Strikes. Timisoara became the center of antigovernment activity as strikers closed down the city. The government began talks with the opposition National Liberal party in an effort to conciliate the protestors (December 17).

YUGOSLAVIA

1990, January 22. Renunciation of Communist Domination. The Congress of the League of Communists voted to repudiate the party's constitutionally guaranteed control. Disputes arose between liberal Slovenes and traditionalist Serbs in the government.

1990, January 24. Anti-Serbian Rioting. Ethnic Albanians in Kosovo Province in the Republic of Serbia protested Serbian political control. The official death toll was 19.

1990, July 2. Kosovo Declares Independence from Serbia. The Serbian government, denounced the action as unconstitutional and dissolved the government and parliament of Kosovo, assuming direct control of the province (July 5).

1990, July 3. Slovenia Declares Sovereignty. The republic declared that its laws took precedence over those of the Yugoslavian Federation.

1990, December 22. Slovenia Votes for Independence from Yugoslavia.

GREECE

1980–1983. Strained Relations with NATO Allies. The Socialist government of Greece opposed NATO's planned MNF deployment in Western Europe. The unresolved problem of a partitioned Cyprus with 25,000 Turkish troops deployed in northern Cyprus further strained Greek-NATO relations. Prime Minister **Andreas George Papandreou** repeatedly threatened to force the U.S. to give up military bases in Greece. Papandreou did, however, renew the base agreement with the U.S. for an additional 5 years (August 20, 1983).

TURKEY

1975–1984. Continued Deployment of Turkish Troops in Cyprus. Turkey continued to deploy 25,000 troops in Cyprus. But after the Cypriot Turkish Federal State declared its independence and permanent separation from Cyprus, the Turks made a token withdrawal of 1,500 troops (see p. 1499).

1978, December 26. Martial Law Enacted in Thirteen Provinces. In an effort to bring about a halt to internal religious violence between Sunni and Shi'ite Moslems, the government (with the approval of parliament) imposed martial law in 13 of Turkey's 67 provinces (including Ankara and Istanbul). Later this was extended to 6 additional provinces (April 25, 1979).

1980, September 12. Military Coup d'État. Following months of violence due to political and religious rivalry, the Chief of General Staff, General **Kenan Evren,** established a military dictatorship. He pledged a return to democratic government when public order was restored.

1981, January 15. Constituent Assembly Date Selected. General Evren announced his intention to convene a Constituent Assembly to draft a new democratic constitution. This was done June 30.

1982, July 17. Constituent Assembly Submits Draft Constitution. This was approved by a 90 percent vote in a national referendum (November 7).

1983, December 13. End of Military Rule. Following parliamentary elections (November 6), General Evren and his junta resigned (December 11) and a civilian government took office under Premier **Turgut Ozal** (December 13).

CYPRUS

1975, February 13. Turkish Cypriot Federal State Established. Greek Cypriot President **Archbishop Makarios III** refused to recognize the new state. Only Turkey recognized the legitimacy of the new state. Negotiations between the two Cypriot factions made no

progress in solving the partition issue. **Rauf Denktash** was chosen President of Turkish Cyprus (June 20, 1976).

1977, February 12. Partition Negotiations. The Turkish Cypriots accepted territorial concessions in exchange for recognition of their Turkish Cypriot Federated State. However, talks broke down when the Greek Cypriots alleged that the Turkish Cypriots reneged on their part of the bargain.

1983, November 15. Turkish Cyprus Declares Independence. Turkey continued to deploy troops in Cyprus but made the first troop withdrawal since the 1974 invasion.

THE MIDDLE EAST

The Arab League

1976, June 10. Arab League Establishes Peacekeeping Force in Lebanon. The Arab League voted to establish an Arab League peacekeeping force with troops from Algeria, Libya, Saudi Arabia, and Sudan. Syria, which already had nearly 16,000 troops in Lebanon, was also to participate. The force was dominated by the Syrians, who continued to maintain their strong presence in Lebanon (see p. 1505).

1976, September 6. PLO Granted Full Membership in the Arab League. The Arab League unanimously approved an Egyptian-sponsored motion to grant full membership to the Palestinian Liberation Organization (PLO).

1976, October 17. Arab League Deterrent Force for Lebanon. Since Syria either would not or could not bring a cessation of civil war in Lebanon, the leaders of Lebanon, Egypt, Syria, Saudia Arabia, Kuwait, and PLO chief **Yasir Arafat** met at Riyadh, Saudia Arabia, and agreed to establish an Arab League Deterrent Force in Lebanon. The Deterrent Force would be under the personal leadership of President **Elias Sarkas** of Lebanon. The new Deterrent Force was still largely made up of Syrians. Saudi Arabia, the United Arab Emirates (UAE), Sudan, and North Yemen sent small troop contingents, but withdrew them when it became clear that Syria intended to continue its dominance of the Arab League Force (June 1979). The Syrians continued to maintain large forces in Lebanon nominally under the auspices of the Arab League. Later the Arab League chose not to renew the mandate for its Deterrent Force in Lebanon (July 17, 1982; see p. 1505).

1978, November 1. Arab League Denounces Camp David Accords. The Arab League denounced the Camp David Accords and the agreement of Egypt and Israel to negotiate a treaty (see p. 1502).

1979, March 31. Arab League Imposes Sanctions on Egypt. Because of the Israeli-Egyptian peace treaty, the leaders of 18 of the member nations of the Arab League imposed a boycott of Egyptian goods and agreed to sever diplomatic ties with Cairo. However, 2 member states, Sudan and Oman, retained relations with Egypt and absented themselves from the meeting (see p. 1503).

1989, May 23. Conference in Casablanca. Participation by President Mubarak of Egypt marked the Arab League's implicit acceptance of the Camp David peace treaty with Israel.

1990, August 10. Response to Iraqi Invasion of Kuwait. Twelve of 21 League members met and passed a resolution condemning Iraq's invasion of fellow League member Kuwait. The 9 members abstaining were Jordan, Mauritania, Yemen, Sudan, Libya, Tunisia, Chad, Algeria, and the PLO.

1990, October 31. League Headquarters Returns to Cairo. The Arab League moved its headquarters from Tunis back to Cairo, after an absence of 10 years.

Israel

1976, June 27–28. Entebbe Incident. PLO guerrillas hijacked an Air France commercial

aircraft en route to Paris from Athens and diverted it to Entebbe Airport, Uganda. They held the crew and passengers hostage. The hijackers demanded the release of 53 PLO political prisoners in Israel, West Germany, Switzerland, France, and Kenya. The hijackers released 47 passengers but continued to hold hostage 98 passengers and the crew. Uganda's President Idi Amin cooperated with the hijackers, deploying troops to help guard the hostages who were held in the airport terminal. The Israeli government expressed a willingness to negotiate while secretly planning an armed rescue operation.

1976, July 3–4. Entebbe Rescue Mission: Operation "Jonathan." In a daring, meticulously planned and executed rescue operation, Israeli commandos under Lieutenant Colonel **Jonathan Netanyahu** landed at the Entebbe airport, overcame Ugandan and PLO resistance, and freed the hostages. To assure a safe exit the Israelis also destroyed Ugandan air force MiGs based at the airport. The Israelis killed the 7 PLO guerrillas and 20 Ugandan soldiers in the fighting. Three hostages and the Israeli commander, Colonel Netanyahu, were killed; 3 Israeli soldiers were wounded.

1978, March 11. The Coastal Road Massacre. Operating out of Lebanon, 11 seaborne PLO guerrillas landed south of Haifa, killed 1 U.S. civilian on the beach, and attacked a taxi, killing 6 more civilians. The guerrillas commandeered a bus bound for Haifa and made the driver take them toward Tel Aviv. They stopped another northbound bus and opened fire, killing several passengers. They continued south coming within 10 miles of Tel Aviv when they were halted by Israeli troops. In the ensuing fire fight, 9 guerrillas were killed and 2 captured; 35 Israeli civilians were killed and 75 wounded.

1978, March 14–21. The Litani River Operation. In retaliation for the Coastal Road Massacre, the Israeli Defense Force (IDF) launched an invasion of southern Lebanon. The mission was to destroy PLO forces south of the Litani River. Because of the Israeli Cabinet's insistence that casualties be kept to a minimum, the IDF advance was deliberate, enabling most of the PLO fighters to escape beyond the Litani River. Nonetheless, the Israelis were able to secure all of southern Lebanon. They avoided Tyre and the Palestinian refugee camp at Rashidiye.

1978, April 11–June 13. Israeli Withdrawal and the Establishment of a United Nations Force in Lebanon. In accordance with U.N. Security Council Resolution 425, the Israelis withdrew from Lebanon. A United Nations Interim Force in Lebanon (UNIFIL) replaced Israeli troops in southern Lebanon. However, the Israelis insisted that the Lebanese troops and militia commanded by Lebanese Army Major **Saad Haddad** be given control over a strip of land averaging 8 miles in depth just north of the Israeli-Lebanese border. Haddad subsequently named this territory the Independent Republic of Free Lebanon (April 18, 1979). The PLO, however, derisively referred to it as Haddadland.

1978, April–1981, April. PLO Buildup in Lebanon. Following the Litani River Operation, the Israeli withdrawal, and the establishment of the UNIFIL peacekeeping force, the PLO resumed its policy of harassment of Israel. Despite the presence of the UNIFIL forces and Major Haddad's force in southern Lebanon, the PLO made numerous attempts to infiltrate over land and by sea. There were more than 50 artillery and mortar shelling incidents. As a result of these actions 10 Israelis were killed and 57 were wounded. This was a much smaller casualty rate than that before the Litani River Operation, but was considered unacceptable by Israel and the people of northern Galilee. The Israelis carried out numerous air and ground retaliatory attacks upon the PLO in Lebanon, inflicting many casualties. The PLO leaders began reorganizing and changing tactics. They fortified base areas in southern Lebanon. At the same time they began to build up a conventional military force with the assistance of large quantities of arms from the U.S.S.R., including tanks, artillery, and multiple rocket launchers.

1978–1979. Camp David and Peace Treaty with Egypt. **(See p. 1504.)**

1981, June 7. Israeli Air Attack Destroys

Iraqi Nuclear Reactor. Israeli aircraft bombed and destroyed Iraq's sole nuclear power plant, under construction and nearing completion outside of Baghdad, at Osirak. Prime Minister Menachem Begin justified the preemptive raid because Israel believed that Iraqis intended to produce atomic weapons in the plant and to use them against Israel.

1981, July–1982, May. Uneasy Cease-Fire with PLO. Following a cease-fire arranged by U.S. mediator, Ambassador Philip Habib (July 24), an uneasy truce ensued. The PLO, apparently convinced that any retaliatory Israeli offensive would be limited, like the 1978 Litani River Operation, continued its terrorism against Israeli civilian targets, inside Israel, on the West Bank, and in foreign countries. Israel built up forces just south of the border.

1982, June 3. Israeli Diplomat Wounded. The attempted assassination of Israel's ambassador to England culminated a series of PLO terrorist attacks that prompted a massive Israeli reprisal 3 days later.

1982, June 6. Israeli Invasion of Lebanon. **(See p. 1505.)**

1983, February 8. Kahan Commission Report. **(See p. 1477.)**

1983, May 17. Agreement with Lebanon. **(See p. 1506.)**

1985, February 16. Israeli Withdrawal from Lebanon Begins. The Israeli Defense Forces began to withdraw from Lebanon. The withdrawal, except for a narrow strip of southern Lebanon (Israel's so-called "security zone"), was completed in June.

1985, October 1. Bombing of PLO Headquarters in Tunis. In response to a terrorist attack in Cyprus (September), Israeli Air Force F-15s flew 1,500 miles to bomb PLO headquarters in Tunis. The strike killed 67 Arabs; PLO chairman Yasir Arafat was away. Arab states condemned the attack, but the U.S. stated the attack was a "legitimate response" to terrorism.

1987, December. The *Intifada*. Palestinians began a series of uncoordinated demonstrations and protests against Israeli occupation in the occupied West Bank and Gaza. As it became organized the uprising was dubbed *Intifada* ("uprising" or "popular revolt"), and encompassed economic and cultural countermeasures to Israeli occupation. Many of the protests were violent, involving clashes between stone-throwing youths and Israeli police and army reservists. Israeli efforts to control the revolt, and to destroy the *Intifada*'s organization, were largely ineffective. The revolt gained wide support abroad for the Palestinian cause.

1988, May 2–5. Raid into Lebanon. Israeli ground and air forces, responding to guerrilla raids into northern Israel, mounted a punitive expedition into southern Lebanon (May 2). This culminated in a sharp battle with Shi'ite militiamen, won by the Israelis and their Christian militia allies with tank, helicopter, naval gunfire, and air support (May 4).

1990, October 8. Temple Mount Incident. Amid rising tensions because of the Kuwait crisis, Israeli border guards fired into a rioting Palestinian crowd near the Al-Aqsa mosque on Temple Mount in Jerusalem, killing about 20 and wounding about 150. Israel was condemned in the U.N. Security Council (2 resolutions, on October 12 and 24), supported by the United States.

1991, January 17–February 26. Israel Attacked by Iraqi Scud Missiles. Fulfilling prewar promises, Saddam Hussein launched Scud missiles against Israeli population centers. There were few casualties because of the inaccuracy of these weapons, coupled with the arrival of U.S. Patriot SAM-ATBM units and Iraqi inability to employ chemical warheads. Under U.S. pressure, the Israelis uncharacteristically abstained from striking back, despite considerable public clamor to do so as the sporadic bombardment wore on. (See also p. 1480.)

Egypt

1975, March 29. Reopening of Suez Canal. Egyptian President **Anwar Sadat** announced that Egypt had reopened the Suez Canal. Israeli ships were barred from using the canal. Sadat also announced that he would renew the mandate of the U.N. Sinai peacekeeping force (see U.N., p. 1483).

Patriot Missile launched in Intercept Test
(*U.S. Army photo*)

1975, July–1976 August. Tense Relations with Libya. Egypt charged Libya with numerous acts of terrorism and plans for terrorist acts in Egypt.

1975, September 1. Egypt and Israel Agree on Sinai Disengagement. After a summer of negotiating, Israel and Egypt reached agreement on Sinai troop withdrawals. The Israelis agreed to withdraw from the Mitla and Gidi passes and return the Abu Rudeis oil fields to Egypt. Egypt agreed to allow Israel to ship nonmilitary goods through the Suez Canal. Both sides agreed to limit the number of troops in the Sinai Peninsula to 8,000. Americans were to operate an early warning system in the passes.

1975, November 30. Israeli Withdrawal. In accordance with the Sinai disengagement agreement, the Israelis withdrew from a 90-mile strip, including the oil fields.

1976, March 14. Sadat Ends Soviet Friendship Treaty. Citing Soviet refusal to rebuild Egyptian military capability after the 1973 Arab-Israeli War and the Soviet unwillingness to reschedule debts, Egyptian President Sadat renounced the 1971 Friendship Treaty with the Soviet Union. Sadat was harshly critical of the Soviets for preventing India from supplying Egypt with MiG parts from a Soviet-licensed MiG plant in India. Sadat later signed an arms deal with China to procure the spare parts for the MiGs (April 21).

1976, July 13–18. Egyptian-Sudanese-Saudi Arabian Cooperation Pacts Signed. Egyptian President Anwar Sadat and Sudanese President **Gaafar al-Nimeiry** agreed to a nonaggression pact to deter Libyan aggression against Sudan. The two leaders flew to Jiddah, where they met Saudi Arabia's King **Khalid** and concluded a trilateral agreement on military, political, and economic cooperation. Sadat and Nimeiry were convinced that Libya's Qaddafi had been behind an aborted coup attempt in Sudan earlier that month (see p. 1535).

1976, December 18–21. Joint Political Command Established between Syria and Egypt. Talks between Egypt's President Anwar Sadat and Syria's President Hafez Assad concluded with an agreement to coordinate the defense and foreign policies of their two countries.

1977, January 16–19. Troops Used to Quell Food Riots. Egyptian troops suppressed riots resulting from government approved rises in food prices.

1977, July 12–19. Border Incidents with Libya. Relations between Libya and Egypt worsened as Egyptian authorities arrested Libyan saboteurs in the border region (July 12). Libyan officials responded by arresting 10 Egyptians (July 16). These incidents culminated in an armed clash.

1977, July 21–24. Egypt–Libya: Border Conflict. Egyptian troops turned back a Libyan combined arms attack across the Egyptian-Libyan border. The Egyptians claimed to have shot down 2 Libyan aircraft and knocked out

Soldiers from the 101st Airborne Division write their thoughts on abandoned SCUD Missile somewhere in Iraq (*U.S. Army photo by SPC Elliot*)

40 tanks. Egyptian losses were light. The Egyptians retaliated by launching a counterattack across the Libyan border and an air attack against a Libyan air base. Satisfied that Libyan dictator **Muammar Qaddafi** had for the time being learned his lesson, Sadat called a cease-fire (July 25). Sadat warned that "that maniac [Qaddafi] is playing with fire."

1977, November 10–18. Sadat Offers to Go to Israel. In a series of dramatic announcements, President Sadat declared he was ready to visit Jerusalem to discuss peace. Prime Minister Begin reciprocated by inviting Sadat.

1977, November 20–22. Sadat Visits Jerusalem. Sadat boldly visited the Israeli capital and addressed the Knesset. Sadat and Begin pledged that they would work for peace and that they would end the enmity between their two countries. A peace process was begun. However, leading Arab nations, especially Libya and Syria, expressed indignation at Sadat's visit and efforts to bring an end to hostilities with Israel. Libya severed diplomatic ties with Egypt.

1977, December 2–5. Arab States Form Anti-Egyptian Front. Representatives of Libya, Syria, Iraq, Algeria, South Yemen, and the PLO met in Tripoli and agreed to form an anti-Egyptian front. Although they condemned Sadat's peace initiative as an act of "high treason," they did not eliminate hopes for eventual rapprochement. The relative mildness of the condemnation prompted a break between Iraq and the other Arab members of the new anti-Egyptian front, causing the Iraqi representative to leave the conference early. Sadat promptly recalled his ambassadors from the five member nations (December 5).

1978, February 23. Egyptian Raid on Cyprus. Arab terrorists claiming to be PLO at-

tacked and killed an Egyptian newspaper editor in Nicosia, Cyprus (February 19), and took 30 hostages. Sadat sent Egyptian commandos on a rescue mission. The commandos killed the terrorists, but then were attacked themselves by a unit of the Cypriot National Guard. Fifteen commandos were killed in the ensuing battle. Others were captured. Egyptian officials were furious and subsequently broke off diplomatic relations with Cyprus.

1978, September 7–17. Camp David Talks and Accords. U.S. President Jimmy Carter arbitrated negotiations between Sadat and Begin for over a week until they agreed on a working plan for a peace treaty. They agreed that the West Bank would have autonomy and that Egypt and Israel would sign a peace treaty within 3 months of the signing of the Camp David Accords.

1979, March 20. U.S. Agrees to Provide Arms to Egypt and Compensation to Israel. As a preliminary to signature of the Egyptian-Israeli Peace Treaty, the U.S. pledged to provide Egypt with warplanes and weapons worth $2 billion and to compensate Israel for its withdrawal from the Sinai with $3 billion.

1979, March 26. Egyptian-Israeli Peace Treaty Signed. After months of difficult negotiations, Egyptian President Sadat and Israeli Prime Minister Begin signed a peace treaty between their two countries in Washington. Both leaders gave U.S. President Jimmy Carter credit for his vital role in the negotiations. Under the terms of the treaty, the Israelis pledged a staged withdrawal of troops and settlers from the Sinai Peninsula, to be completed in 3 years. Israel would use the Suez Canal and pledged to begin negotiations for Palestinian self-rule a month after ratification.

1979, March 27. Israel Starts Withdrawal. Israeli troops began the first stage of withdrawal.

1979, September 8. Egypt Helps Morocco Battle Polisario. Egyptian arms were received by Morocco to assist in the war with Polisario (see p. 1549)

1979, October 6. First U.S. Arms Shipment to Egypt. In a parade commemorating the sixth anniversary of Egypt's crossing of the Suez Canal to begin the October War (1973) Egypt displayed the first new weapons systems received from the United States. The recent Egyptian acquisitions displayed at the parade were F-4 Phantom jet fighter-bombers and M-113 armored personnel carriers (APCs).

1980, January 8. U.S. and Egypt Joint Training Exercises. It was announced that U.S. and Egyptian air forces had recently concluded joint training exercises at Egyptian Air Base at Luxor.

1981, October 6. Sadat Assassinated. President Anwar Sadat was assassinated while he was reviewing a parade commemorating the Egyptian crossing of the Suez Canal at the beginning of the 1973 war with Israel. The assassins, one a soldier, were Moslem fundamentalists opposed to Sadat's peace with Israel and his liberal interpretation of Islamic law. He was replaced by former Vice President Hosni Mubarak.

1981, November 14. Operation Bright Star Begins. Egypt began joint maneuvers with Sudan, Somalia, Oman, and the U.S.

1982, April 25. Israelis Complete Withdrawal from the Sinai.

1983, August 18–September 18. Operation Bright Star 83. Over 5,000 U.S. troops participated with Egyptian troops in joint maneuvers.

1985, October 7–14. The *Achille Lauro* Hijacking. Four members of the Palestinian Liberation Front (PLF) hijacked the Italian cruise liner *Achille Lauro* off the Egyptian coast (October 7), killed an American passenger, and then surrendered to PLO officials after negotiations (October 9). U.S. carrier-borne F-14 fighters intercepted the civilian airliner carrying the 4 terrorists to Tunis (headquarters of the PLO) over international waters, and forced it to land in Sicily, where the hijackers were arrested and charged (October 11). Although the Egyptian government had condemned the original hijacking, it protested the U.S. action as "piracy." U.S. success was marred when Italy allowed PLF chief Abu Abbas to leave, over U.S. protests (October 12).

1990, August 8–1991, February 26. Egyptian

Role in Kuwait Crisis. President Mubarak announced Egyptian willingness to contribute to a multinational force in the gulf (August 8, 1990); Egyptian troops began arriving in Saudi Arabia soon after (August 11). The Egyptians deployed an armored division, a mechanized division, commando units, and support troops in Saudi Arabia (January 1991). These forces took part in the U.N. coalition offensive (February 24–28, 1991; see p. 1476).

Yemen (North Yemen)

1977, October 10. Assassinations of President and Vice-President. President **Ibrahim al-Hamdi** and his brother Colonel **Abdullah Mohammed al-Hamdi** were assassinated. The assassins apparently hoped to prevent planned discussions with South Yemen regarding a possible merger of the two countries.

1978, June 24. President Assassinated. The new President, **Ahmed Hussein al-Ghashmi,** was killed when the briefcase of an envoy from South Yemen President **Salem Rubaya Ali** exploded. The South Yemen envoy was also killed in the blast. North Yemen authorities charged that the assassination was planned by Rubaya. Other Arab sources said that the bomb was planted by North Yemen political opponents of Ghashmi. A 3-man military council replaced Ghashmi.

1979, February 24–26. Border Fighting with South Yemen. North Yemen officials alleged that South Yemeni troops had attacked across the border. South Yemen officials denied the charge and claimed they were responding to an invasion of their territory by North Yemen. Both countries agreed to let the Arab League mediate (February 28).

1979, March 17. Cease-Fire. Both North and South Yemen agreed to a cease-fire.

1979, March 29, National Unification Agreement. Following the cease-fire, reconciliation talks were held between North and South Yemen. Despite apparent agreement, the unification did not take place.

1980, May–June. Renewed Conflict with Southern Yemen. (See p. 1514.)

Lebanon

1975–1984. Lebanese Civil War. The establishment of the PLO in Lebanon exacerbated tensions between various Moslem and Christian factions. Full-scale civil war broke out (April 13, 1975). This conflict continued to rage throughout the remainder of the decade and into the 1980s. The PLO, whose objective was the destruction of Israel, used Lebanon as a staging area from which to conduct raids into Israel and to use long-range artillery and rockets to shell Israeli territory.

1976, March. Syrian Intervention. Under the pretext of acting as a peacemaker between warring Lebanese factions, Syria dispatched troops to Lebanon, initially to prevent the PLO and Moslem Lebanese factions from defeating the Christians.

1978, March 14–21. Israeli Invasion of Southern Lebanon: The Litani River Operation. (See p. 1500.)

1978, April 11–June 13. Israeli Withdrawal and the Establishment of United Nations Interim Force in Lebanon. (See p. 1500.)

1978, April–1981, June. PLO Buildup in Lebanon. The PLO built an extensive military/political infrastructure in Lebanon. They received large shipments of arms and equipment from the Soviet Union (see p. 1500).

1982, June–August. Israeli Invasion of Lebanon. (See p. 1475.)

1982, August 21–28. Deployment of Multinational Peacekeeping Force. (See p. 1476.)

1982, August 27–September 3. Evacuation of PLO and Syrian Forces from Beirut. All 15,000 Syrian and PLO forces were evacuated, most by sea; the Syrians and a small Palestine Liberation Army (PLA) contingent went overland through Israeli lines to Damascus. The multinational force contingents withdrew shortly after this (September 10).

1982, September 13. Assassination of President-elect Bashir Gemayel. Lebanese

President-elect Gemayel was assassinated by terrorists allegedly backed by Syria. Israeli troops occupied Beirut for the declared purpose of keeping order and preventing bloodshed.

1982, September 16–19. Sabra and Shatilla Refugee Camp Massacres. **(See p. 1477.)**

1982, September 20–22. Multinational Peacekeeping Force Redeployed in Beirut. This was in response to world horror because of the Sabra and Shatilla massacres. The U.S. Marine position was just east of the airport. The Italian contingent was further north, closer to Beirut. The French contingent was still further north, on the outskirts of West Beirut. They were later joined by a token British contingent of about 150 men, who took position near the U.S. Marines.

1982–1983. Buildup of PLO in Northern Lebanon. Despite their defeat, the PLO were able to reorganize and began rebuilding their forces in Lebanon.

1983, May 17. Lebanon-Israel Agreement. With the diplomatic aid of the United States, Israel and the Lebanese government of President **Amin Gemayel** reached an agreement which was, in effect, a treaty between the two nations, ending a war which had existed since 1947. Israel was recognized by the Lebanese government and relations between the two countries were at least partially normalized.

1983, September 3. Partial Israeli Withdrawal. Against the wishes of the United States, which wanted the Israelis to remain in the Chouf Mountains to maintain order, the Israelis withdrew their forces (about 10,000 troops) from the Beirut area and the Chouf (Shouf) Mountains to new positions south of the Awali River.

1983, September 4–25. Civil War in the Chouf Mountains. As the Israelis were completing their withdrawal, Phalangist troops and the Lebanese Army began to move into the areas evacuated. The local Druze Moslem militia began immediately attacking both Phalangist and Lebanese army forces. The Druze attacked major strongholds at Aley (Alieh) 10 miles east of Beirut and Bhamdun south of the Beirut-Damascus highway (September 4–6). In subsequent fighting, the Druze militiamen surrounded Deir al Qamar (September 10), and attacked Suk al Gharb, which directly overlooked the President's palace (September 10–11). A Druze armored assault was turned back from Suk al Gharb with the help of U.S. naval gunfire support from offshore (September 19). The warring Lebanese factions agreed to a cease-fire arranged by Saudi mediator Prince **Bandar bin Sultan** (September 25). During this fighting considerable fire from the Druze guns landed in and near the multinational force positions, mostly near the U.S. Marines. Much of this was fire from stray rounds. Much of it was deliberate. The cease-fire was subsequently broken on a number of occasions.

1983, September 10–October 20. U.S. Navy Supports Marine Peacekeeping Efforts in Beirut. The U.S. government authorized air strikes and gunfire support from the U.S. Navy squadron offshore near Beirut, to help defend the Marine positions near the Beirut Airport. The Navy was also authorized to fire in support of nearby Lebanese Army positions if these were believed to contribute to the security of the Marine positions. The result was occasional fire from U.S. ships against nearby positions of Druze and other antigovernment militia, and against their supporting artillery in the Syrian occupied zone further east. U.S. carrier aircraft began to fly reconnaissance missions over west-central Lebanon.

Carrier USS *Hancock* (*U.S. Navy photo*)

1983, October 23. Suicide Attack on U.S. and French Peacekeeping Force. An Arab terrorist allegedly belonging to a pro-Iranian and pro-Syrian terrorist organization drove a truck loaded with explosives into a combined headquarters and barracks building in the U.S. Marine compound; 241 servicemen were killed. This led to widespread demands in the United States that the Marines be brought home. An official inquiry determined that inadequate security precautions had been taken, and blamed security failures on the local Marine commander, and Navy and Army senior officers in the chain of command. President Ronald Reagan assumed responsibility and no officers were court-martialed. Simultaneously a similar attack on the French peacekeeping force compound killed 58 French soldiers and wounded 15.

1983, November 13–14. Renewed Fighting between Druze Forces and Lebanese Army. After a number of cease-fire violations in weeks following the September 25 cease-fire agreement, fighting erupted at Suk al Gharb in the mountains just east of and overlooking Beirut. The Druze militia began shelling Christian East Beirut. Intense combat ensued between the militias and the Lebanese Army. Again U.S. Marine positions at the airport came under fire. Fighting continued until a new cease-fire was arranged (December 27).

1983, December 4. Two U.S. Planes Shot Down by Syrian SAMs. Following Syrian firing on U.S. reconnaissance planes (December 3) U.S. Navy carrier planes carried out attacks against Syrian air defense positions in the Bekaa Valley. In the attack 2 planes were shot down by Syrian SAMs. One crew was rescued; in the other the pilot was killed, and the navigator, Lieutenant **Robert Goodman,** captured. The Syrians held Goodman as a prisoner of war.

1983, December. Continued Shelling of Marine Position. The U.S. Marine positions were repeatedly shelled. The Marines returned fire.

1983, December. Pro- and Anti-Arafat PLO Forces Battle in Tripoli Area. PLO dissidents, dissatisfied with **Yasir Arafat's** leadership, had been fighting against PLO forces loyal to Arafat for several months. The dissidents, supported by Syria, drove the loyalist contingents back to the port city of Tripoli. A cease-fire was finally arranged between the PLO combatants; Arafat and troops loyal to him were allowed to leave Lebanon by ship. Israeli ships at first barred Arafat's departure, but eventually (after pressure from the U.S.) permitted him to escape (December 20).

1983, December–1984, January 3. Jesse Jackson Wins Goodman's Release. Reverend **Jesse Jackson,** a Democratic Party candidate for President of the United States, appealed personally to Syrian President Hafez Assad in Damascus and won the release of Navy flyer Lieutenant Robert Goodman. The Syrians announced that the release was for humanitarian reasons.

1984, January 15. Death of Haddad. Major Saad Haddad, commander of Lebanese troops and militia in southern Lebanon, died after a lengthy illness (see p. 1500). Haddad, who had been expelled from the Lebanese Army by the pro-Syrian government in 1979, was reinstated to his rank just before his death by the Lebanese State Court, Lebanon's highest judical body. The Court, composed of 1 Christian and 2 Moslems, held that Haddad's dismissal had been unjust and prompted by international pressure. He had, in fact, been continuously paid by the Lebanese Army, and had received regular logistical support from Lebanon, through Haifa. The Israelis praised Haddad for his courage and sense of soldierly duty. Haddad, a Christian, was admired and praised by fellow officers of the Lebanese Army, Moslem and Christian.

1984, January 6–March 5. Druze and Shi'ite Moslems Defeat Lebanese Army. Intense fighting again erupted between Druze and Shi'ite militiamen and Lebanese Army units (January 6). After a brief lull, the fighting intensified (January 13), and the Syrian-backed Shi'ite and Druze forces won a complete victory over the Army east and south of Beirut. At the same time, Shi'ite militiamen drove the Lebanese Army out of West Beirut. President

Gemayel tacitly acknowledged the changed milieu by going to Damascus to conduct talks with Syrian President Assad (February 29–March 1) in order to strike the best deal he could and retain some power in Lebanon. Upon returning to Lebanon at the conclusion of the negotiations (March 5), he renounced the Lebanese agreement with Israel (see p. 1506).

1984, February 7–March 31. Withdrawal of the Multinational Peacekeeping Force from Lebanon. President Reagan ordered the withdrawal of the U.S. Marine peacekeeping force from Beirut. The next day the British contingent of the multinational peacekeeping force was withdrawn and the Italian government likewise announced the withdrawal of its peacekeeping contingent (February 8). The Marines began withdrawing to ships offshore 2 weeks later (February 21). The withdrawal of the U.S. peacekeeping force was complete some 5 weeks later when President Reagan announced that the U.S. Peacekeeping role was at an end (March 31). That same day the French completed the withdrawal of their peacekeeping force.

1984–1988. Continuing Civil Strife. Although major fighting was relatively infrequent, none of the factions involved, including the Syrians, was able to establish order in Lebanon, or even in Beirut itself. Terrorism and minor skirmishing were virtually everyday events, contributing to a slow erosion of Lebanese national life.

1985, February–June. Israeli Withdrawal. Three years after the opening of Ariel Sharon's "Peace for Galilee" operation, the last Israeli troops withdrew from Lebanon north of a narrow Israeli-declared "security zone" in the south.

1988, May 6–12. Fighting Between Amal and Hezbollah. The Shi'ite Amal and Hezbollah (Army of God) militias waged a series of bloody clashes in suburban Beirut, each attempting to assert leadership of Lebanese Shi'ite Moslems.

1989, March 17. "War of Liberation." Following Christian attacks on West Beirut, and a Moslem car-bomb explosion (March 17), Christian General Michel Aoun (appointed commander of the Lebanese Army by Gemayel in late 1988) declared a "War of Liberation" to rid Lebanon of Syrian forces and their allies.

1989, September 6. U.S. Evacuates Embassy. As U.S. relations with Aoun deteriorated, the U.S. evacuated its Beirut embassy, leaving Aoun increasingly isolated diplomatically.

1989, August–October. Ta'if Conference. Meeting in the Saudi Arabian city of Ta'if for security reasons, members of the 1972 National Assembly tried to hammer out a settlement of the Lebanese civil war and crisis. Complete agreement was stymied by General Aoun's intransigence, and by concerns over a timetable for Syrian withdrawal.

1990, January 30. Aoun Attacks Christian Militia. General Aoun's troops attacked the Christian Lebanese Forces militia. Within 3 months the casualties totaled 4,000, including nearly 1,000 dead.

1990, April 3. Lebanese Forces Declare for Hrawi. President **Elias Hrawi** gained an important ally when **Samir Geagea,** leader of the Christian Phalangist Lebanese Forces militia, declared his allegiance to Hrawi.

1990, September 28–October 13. Defeat of Aoun. Syrian and Lebanese Army forces blockaded Aoun's positions in the hills east of Beirut. A Syrian air and ground assault (October 12) compelled Aoun to quit the Presidential Palace and seek political asylum in the French embassy (October 13).

1990, October 25. Militia Withdrawal Agreements. President Hrawi obtained agreement for the withdrawal of all militias from Beirut. He later (November 7) announced the intended dissolution of all militias by March 1991, and the withdrawal of all Syrian forces by September 1992.

Syria

1975, June 3–July 8. Increased Tensions and Border Incidents with Iraq. (See p. 1511.)

1975, June 12–August 22. Coordination of Military Policy with Jordan. (See p. 1512.)

1975, December 25–31. Joint Jordanian-Syrian Military Exercises. (See p. 1512.)

1976–1981. Syrian Buildup in Lebanon. Syria moved into Lebanon under the pretext of being a peacemaker between Christian militia on one side and the PLO and its Lebanese Moslem leftist allies on the other (March 1976; see pp. 1499, 1505). The Syrians subsequently received approval from the Arab League to contribute troops to an Arab League Deterrent Force (October 17–18, 1976; see p. 1499). The Syrians gradually increased the size of their forces in Lebanon to about 20,000 troops and shifted their support from the Lebanese Christians to the Moslem factions. The Syrians were deployed in Beirut and south of the Damascus-Beirut highway, along the western slopes of Mount Hermon and in the Bekaa Valley.

1976, June–December. Strained Relations with Iraq. (See p. 1511.)

1977, February 4. Joint Political Command Established between Syria and Egypt. (See p. 1502.)

1977, December 2–5. Arab States Form Anti-Sadat Front at Tripoli Conference. (See p. 1503.)

1978, January 11. Syrian-Soviet Arms Deal. President Hafez Assad made an arms deal with the Soviet Union in which Syria was to receive additional SAMs, tanks, and planes.

1978, October 24–26. Syria and Iraq Agree on Political and Military Coordination. In response to the Israeli-Egyptian Camp David Accords the governments of Syria and Iraq put aside their serious policy differences and pledged to establish a bilateral committee to coordinate military strategy, defense, and foreign policies in order to "serve as the basis for a full military union."

1979, June 19. Joint Political Command with Iraq Established. In accordance with their earlier agreement, Syria and Iraq established a Joint Political Command to coordinate defense, foreign, and economic policies.

1979, August 8. Assad Charged with Supporting Attempted Coup in Iraq. Saddam Hussein, new chairman of Iraq's Revolutionary Command, accused Syrian President Assad of supporting a recent coup attempt in Iraq (see p. 1511). This ended all planning for policy coordination.

1980, September–1988, August. Syrian Support for Iran. Syria was the only Arab state to support Iran during the Iran-Iraq war, largely because of President Assad's hostility to Saddam Hussein and the Iraqi Ba'athist regime.

1982, February 2–24. Syrian Troops Crush Hama Revolt. Efforts by the Syrian Army to suppress the illegal Moslem Brotherhood in Hama led to a full-scale revolt by Sunni Moslem fundamentalists. Fighting was bitter and thousands of Hama residents were killed. Eventually the troops employed armor to destroy whole sections of the city.

1982, March 7. Assad Blames Iraq for Hama Revolt. Syrian President Assad accused Iraq of arming the Moslem Brotherhood, enabling them to revolt against Syrian authority.

1982, June 6–26. War with Israel in Lebanon. (See p. 1474.)

1982, September–December. Syria Rebuilds Armed Forces with Soviet Aid. Syria, with the aid of the Soviet Union, rebuilt the forces shattered in the recent war with Israel. The U.S.S.R. not only replaced the arms and equipment the Syrians had lost in Lebanon but supplied additional weaponry as well.

1983, December 4. Syrian SAMs Shoot Down American Planes. (See p. 1508.)

1984, February 29–March 1. Assad Receives Gemayel. Lebanese President Amin Gemayel traveled to Damascus to meet Syrian President Hafez Assad. Syria had gained virtual domination over all of Lebanon except the southern area occupied by Israel.

1990, April–October 13. Syria Helps Defeat General Aoun. Syrian forces lent strong support, including tanks and aircraft, to efforts by Lebanese President Hrawi to drive out and defeat General Aoun. (See Lebanon, p. 1509.)

1990, August 10. Syria Joins Coalition Against Iraq. At the emergency Arab summit in Cairo, Syria pledges its support against Iraq. This move placed Syria and the U.S. in the same camp. Syria eventually deployed its 9th Ar-

mored Division (15,000 men and 300 tanks) to Saudi Arabia (November–December).

Iraq

1975, June 3–July 8. Strained Relations with Syria. Within weeks of settling a dispute over Syrian control of the flow of water of the Euphrates River (June 3), relations again became strained. Iraq charged Syria with violating Iraqi air space and with armed incursions of Syrian troops into Iraq. Iraq also claimed that Syria was aiding Kurdish rebels in their attempt to win autonomy (see p. 1399). Syria countered by ousting the Iraqi military attaché from Damascus and closing its military attaché's office in Baghdad (July 8).

1976, May 1–30. Kurd Revolt Renewed. Hostilities with Kurd tribesmen in northeast Iraq flared up. The new fighting was caused by the Iraqi policy of forcing Kurds to relocate. The Kurd insurgents were apparently receiving aid from Syria.

1976, June–December Increased Tension with Syria. Syrian intervention in Lebanon further strained relations between Iraq and Syria. Claiming that Syria posed a grave threat to its security Iraq called up its reserves and massed troops on its border with Syria (June 9–12). Syria responded by concentrating forces in the border region. Relations were further strained by Syrian acknowledgment of aid to Kurd rebels (July 4). Syria accused Iraq of closing the common border in order to cover large-scale troop movements (November 2). Relations remained tense as Syrian Foreign Minister **Abdel Halim Khaddam** was wounded in an assassination attempt traced to the radical Palestinian Black June movement, based in Iraq (December 2), while Iraq blamed Syria for attempting to assassinate Saddam Hussein, Deputy Chairman of the Iraqi Revolutionary Command Council (December 14).

1977, July–October. Continued Strained Relations with Syria. (See p. 1510.)

1977, December 2–5. Arab States Form Anti-Sadat Front at Tripoli Conference. (See p. 1503.)

1978, October 24–26. Syria and Iraq Agree on Joint Political-Military Command. (See p. 1510.)

1979, March 1. Kurdish Guerrilla Chieftan Dies. General **Mustafa Barzani,** leader of the Kurdish Democratic Party (KDP) and the Kurdish struggle for autonomy, died in Washington (see pp. 1398–1399). Barzani's sons continued the struggle for autonomy.

1979, June 4–14. Iraqi Counterinsurgency Operations into Iran. Iraqi troops in pursuit of Kurd guerrilla fighters raided Iranian territory, and Iraqi jets strafed Iranian villages (June 4–5). These attacks evoked a warning from the Iranian government (June 14).

1979, June 19, Joint Syrian-Iraqi Command Established. (See p. 1510.)

1979, July 20–August 8. Attempted Coup Foiled; Syrian Involvement Charged. An attempted coup against the new regime of President Saddam Hussein was foiled, and one of the major conspirators allegedly confessed to receiving Syrian support. Syrian President Assad denied the charge (August 6). Twenty-two coconspirators, including five members of the Revolutionary Command Council, were executed by firing squad (August 8). The allegations against Assad ended any chance for the implementation of the two nations' plans for a joint political and military command (see p. 1510).

1979, September 1. Iran Accuses Iraq of Aiding Kurd Rebels. (See p. 1515.)

1980, September–1988, August 20. Iran–Iraq Gulf War. (See p. 1469.)

1980, October 1. Kurds Escalate Guerrilla Activities. A London-based spokesman for the Kurd Democratic Party said that the guerrillas fighting for Kurd autonomy had escalated their insurgency efforts against the Iraqi government. The guerrillas, led by **Massoud** and **Idris Barzani,** sought to take advantage of the war between Iraq and Iran in order to win autonomy from Iraq.

1981, June 7. Israeli Air Attack Destroys Iraq's Nuclear Reactor. (See pp. 1500–1501.)

1989, January. Attempted Coup. Saddam

Hussein survived an attempted coup mounted by dissident army officers.

1990, March–April. Seizure of Advanced Weapons Bound for Iraq. U.S. and British customs officials, cooperating in an elaborate "sting" operation, seized a shipment of nuclear trigger devices bound for Iraq (March 28). British officials later confiscated lengths of tubing said to be parts for an Iraqi "supergun," reputedly devised by maverick U.S.–Canadian gun designer **Gerald Bull** (March 11).

1990, April 2. Saddam Threatens Chemical Attack on Israel. In a public speech, Saddam Hussein threatened to use chemical weapons against Israel in the event of an Israeli nuclear attack on Iraq or any other Arab nation. The implied chemical capacity caused considerable alarm after the invasion of Kuwait in August (see p. 1472).

1990, April. Air Force Officers Executed. Reports surfaced outside Iraq that 17 air force officers were executed for plotting against Saddam Hussein.

Jordan

1975, August 22. Joint Jordanian and Syrian Political-Military Command Formed. Jordan's King Hussein and Syrian President Hafez Assad issued a joint communiqué, announcing the establishing of a joint high command to formulate, coordinate, and execute political and military initiatives against Israel.

1975, December 25–31. Joint Military Exercises with Syria. Two Jordanian brigades of about 10,000 troops joined Syrian forces for maneuvers in Syria, simulating defensive operations against a hypothetical Israeli invasion.

1978–1980. Cooling Relations between Syria and Jordan.

1980, November 26–December 11. Border Tension with Syria. Apparently irritated by King Hussein's announcement of support for Iraq in the Iran-Iraq War, pro-Iranian President Assad of Syria ordered a troop buildup on the Jordanian-Syrian border. Hussein placed his forces on alert, and ordered several units to the border area. The two leaders bitterly denounced each other in radio addresses to their nations. Israeli Prime Minister Begin announced that Israel would not tolerate a Syrian invasion of Jordan. Syria issued a list of demands on Jordan, including a call for Jordan to reassert its pledge recognizing the PLO as the only legitimate representative of the Palestinian people (December 2). Hussein rejected the Syrian demands. The crisis was eased by Saudi Arabian mediation. The Syrians withdrew their troops from the border (December 11); next day the Jordanians followed suit.

1982, January 28–March 3. Hussein Reaffirms Jordanian Support of Iraq War Effort; Calls for Volunteers. The Jordanian volunteer contingent was to be called the Yarmuk Force, in honor of the Arab victory over the Byzantines (636 A.D.; see p. 249). In his plea for volunteers Hussein denounced Iran as a threat to the Arab world.

1988, July 31. Jordan Abandons West Bank Claims. In a dramatic announcement, King Hussein abandoned Jordan's claims on, and responsibilities to, the West Bank. This move effectively surrendered leadership in the occupied zones to the PLO and leaders of the *Intifada*.

1990, April 18–20. Riots in Southern Jordan. Protesting widespread price increases, Jordanians rioted in the southern towns of Ma'an, Karak, Tafilah, and Shobek. Eight died before order was restored.

Saudi Arabia

1978, February 14. Saudi Arabia Buys F-15 Fighters from the U.S. The U.S. agreed to sell Saudi Arabia 60 F-15 fighter planes for $2.5 billion as part of a larger deal involving the sale of planes to Israel and Egypt (see p. 1504). The sale was later approved by the U.S. Senate (May 15) with the provision that the planes not be deployed near Israel.

1979, March 9. U.S. Sends AWACs to Saudi Arabia. The 2 Airborne Warning and Control reconnaissance planes were intended to help both the U.S. and Saudi Arabia improve intelligence capabilities in the Persian Gulf area,

threatened by revolution in Iran. These were American planes, with American crews, but providing information to the Saudi armed forces. The U.S. government believed that this would help the U.S. retain Saudi Arabian friendship. Some observers, particularly in Israel, believed this was naïve.

1980, September 30. More AWACs to Saudis. The U.S. government shipped 4 more U.S. AWAC reconnaissance planes to Saudi Arabia to bolster American interest, influence, and capability in the Persian Gulf area in the aftermath of the Iranian Revolution.

1981, August 8. Saudi Crown Prince Offers Peace Plan for Middle East. Crown Prince Fahd's plan provided for Israeli withdrawal from all occupied territory, the removal of all Israeli West Bank settlements, the establishment of a Palestine State, and the right of all peoples to live in peace. Some Israelis thought the plan offered some hope for peace because of the clause calling for the right of all peoples to live in peace, which was implicit admission of Israeli's right to exist as a sovereign nation. However, the Israeli government rejected the plan, as did the PLO.

1981, October 29. U.S. Senate Approves Sale of AWAC Aircraft to Saudi Arabia. This was achieved only after a bitter parliamentary debate forced by supporters of Israel, which objected strongly to the sale. The Reagan administration apparently hoped that this might influence Saudi Arabia to agree to the establishment of U.S. bases in Saudi Arabia.

1982, January 26. Regional Defense Agreement. Saudi Arabia, Kuwait, Bahrain, Qatar, Oman, and the United Arab Emirates agreed to establish a joint military command and an interlinked air defense system. Prompting this decision were the security challenges posed by the Iranian Revolution, the Gulf War, and the Soviet invasion of Afghanistan.

1987, March. Iranian Pilgrims Riot in Mecca. While on pilgrimage to Mecca (the Moslem holy city), Iranian pilgrims rioted. Saudi security forces reacted swiftly and harshly, provoking a war of words between Iran and Saudi Arabia, and leading to the Saudis limiting Iranian pilgrims to 45,000. Due to Saudi fears of a recurrence, and later evidence that the riots had been planned in advance, the Saudis did not lift the ban until autumn 1990.

1989, March. Saudi-Iraqi Nonaggression Pact.

1990, August–1991, February. Saudi Arabia in the Kuwait Crisis. Fearing invasion after Iraq's conquest of Kuwait, Saudi Arabia played a leading role in mobilizing Arab states against Iraq. Saudi Arabia's request for U.S. aid, and willingness to tolerate U.S. troops on its soil, provoked widespread criticism in the Arab world. The Saudi armed forces, despite lack of experience, performed creditably during the Kuwait War, playing major roles in the Battle of Khafji (January 30–31) and the liberation of Kuwait City (February 24–26). (See p. 1472.)

Oman (Muscat and Oman)

1975–1983. Dhofar Separatist Movement Continues Guerrilla Struggle. Oman continued to battle against the Dhofar separatist movement insurgents. The Dhofar rebels, who had been assisted by Southern Yemen, now also received aid from Libya.

1975, February 2. Defense Pact with Iran. Iran agreed to give Oman air and naval support against foreign aggression. Iranian troops also assisted the Omani Army against the Dhofar rebels.

1980, June 4. Assistance and Base Agreement with the United States. Oman agreed to permit U.S. access to selected naval and air bases in exchange for U.S. military and economic aid.

1982, January 26. Regional Defense League Established. (See above.)

Southern Yemen (People's Democratic Republic of Yemen)

1975, November 30. Cuban Military Advisers in South Yemen. Press reports were subsequently confirmed by the U.S. State Department.

1978, June 25–27. President Deposed and Executed. It is not clear whether President **Salem Rubaya Ali** was overthrown—after a brief battle—because of his reported role in the assassination of President al-Ghashmi in North Yemen (see p. 1505) or because he was suspected by Communist colleagues of possibly reducing his links with the Soviets and improving relations with the U.S. and Saudi Arabia. The Arab League, suspecting the South Yemeni leadership of involvement in Ghashmi's death, suspended economic and cultural ties with South Yemen (July 2).

1980, April 23. President Resigns. Abdel Fattah Ismail was pressured to resign as president of South Yemen because of serious policy differences with Premier **Ali Nasser Mohammed al-Hasani.** Ismail was apparently too eager to bring about the proposed unification with North Yemen.

1980, May 1–June 1. Fighting Intensifies between North and South Yemen. There was a significant rise in armed conflict between North and South Yemen.

1980, June 9. Increase in Soviet-Cuban Presence in South Yemen. The number of Soviet advisers in South Yemen had reportedly risen to more than 1,000 and the number of Cubans to 4,000. The internal security and intelligence systems were allegedly headed by East Germans.

1981, August 19. Treaty with Libya and Ethiopia. The 3 countries pledged reduction of U.S. influence in the region.

1986, January 13–24. Civil War. After gunmen working for President **Ali Nasser Mohammed al-Hasani** killed several of his political opponents at a cabinet meeting (January 13), fighting spread throughout the capital. A week of bloody combat left hundreds dead, much military equipment destroyed, and much of Aden burnt or damaged. Husaini fled the country (January 24).

1989, March. Amnesty for Civil War. Chairman of the Presidium of the Supreme People's Council, **Haidar Abu Bakr al Attar,** announced an amnesty for the losing faction in the 1986 civil war. Former chairman Husaini, in exile in the Republic of Yemen (North), announced he had no further political ambitions. The amnesty led to improved relations with North Yemen.

1989, June 22–1990, May 22. Yemeni Unification. A series of negotiations led to the selection of a 5-man presidential council, and formal unification of the two Yemens as the Republic of Yemen (May 22, 1990).

1990, August 2–1991, February 26. Yemeni Role in the Kuwait Crisis. The new Republic of Yemen, to the intense displeasure of Saudi Arabia, supported Iraq during the crisis, notably voting against U.N. Security Council Resolution 678 (November 29). Saudi economic sanctions, and their expulsion of Yemeni "guest workers," caused considerable economic hardship in Yemen.

Iran

1975–1978. Unrest Becomes Rebellion. Reza Shah Pahlavi combined repression with concessions. Arbitrary arrests were made by the secret police (Savak). Opposition political parties were abolished. Nevertheless, opposition to the Shah's rule increased. Political reforms and the release of political prisoners (September–October 1978) failed to satisfy the opposition.

1978, November 5–6. Military Rule Imposed; National Elections Promised. The Shah established martial law while seeking national reconciliation by promising elections no later than by June 1979. Again repression combined with concessions failed to satisfy the National Front opposition; civil unrest continued.

1978, December 29. Shah Names New Premier for Civilian Government. In a last attempt to satisfy his opponents, the Shah named opposition leader **Shahpur Bakhtiar** to head a civilian government. Bakhtiar accepted and established a government (January 6). However, the response of the National Front opposition was to demand the Shah's abdication and to label Bakhtiar a traitor.

1979, January 13. Khomeini Demands Establishment of Islamic Republic and Shah

Departs Iran. In Paris the exiled **Ayatollah Ruhollah Khomeini,** senior Iranian Islamic (Shi'ite) clergyman, demanded that Iran become an Islamic republic. He established a Revolutionary Council.

1979, January 16. Departure of the Shah. Although the Shah did not formally give up his throne, his departure was tantamount to abdication.

1979, January 16–February 11. Bakhtiar-Khomeini Power Struggle. In an effort to restore order and preserve his government, Bakhtiar temporarily closed Iran's airports to prevent Khomeini's return. When the airports were reopened (January 29) Khomeini immediately flew to Teheran from Paris (February 1), proclaimed the establishment of an Islamic republic, and named **Mehdi Bazargan** premier of a provisional government. Armed civilians and rebel soldiers battled government troops in a climactic 3-day struggle, which ended with the overthrow of the Bakhtiar government (February 9–11).

1979, February 12. Khomeini's Islamic Republic Established. Although Khomeini himself had no official cabinet portfolio, he exercised virtually unlimited power.

1979, February 14. First Invasion of U.S. Embassy. Iranian "students" broke into the diplomatic compound of the U.S. embassy and took a U.S. Marine hostage, but later freed him (February 21).

1979, February 26–December 30. Rebellion and Civil Strife in Provinces. A wave of civil unrest, violence, and in some cases outright rebellion swept through several Iranian provinces. Uprisings began in Azerbaijan, where an army barracks was seized (February 22). In response to unrest in Kurdistan, the Kurds were granted limited autonomy (March 25). This did not satisfy them and armed clashes continued throughout the summer.

1979, August–October. Civil War in Kurdistan. Khomeini mobilized the armed forces in order to wipe out the Kurdish rebellion (August 19). The Iranian government also accused Iraq of assisting the Kurdish rebels. A determined offensive by government troops drove the Kurds from their strongholds and across the border into Iraq (September 6). But guerrilla warfare continued. The Kurds regained a key stronghold, Mehabad (October 20), then called for a cease-fire (October 22), which was subsequently granted.

1979, November 3. Seizure of U.S. Embassy. Militant Iranian "students" broke into the U.S. embassy compound and seized some 90 hostages, including 62 (later 66) Americans. Of these, 13 were soon released because they were black and/or women (November 19–20). The 53 remaining Americans were held as prisoners, and were subjected to abuse and mistreatment by their captors. One hostage was eventually released because he was severely ill (July 11, 1980).

1979, December 5. Renewed Hostilities in Kurdistan and Azerbaijan. Following a national plebiscite and a new constitution the Kurds rose again in rebellion. In Azerbaijan the Moslem People's Party took almost complete control of the province, but the central government soon regained authority.

1980–1984. Kurd Revolt Continues. Despite numerous offensives the Iranian Armed Forces were unable to suppress the Kurd rebellion. The Iranian Kurds received aid from Iran's arch enemy Iraq, while Iraq's rebellious Kurds allied themselves with Iran (see p. 1511).

1980, April 24–25. U.S. Efforts to Rescue Hostages: "Desert One." After repeated diplomatic efforts had been rebuffed, an American Joint Service rescue mission was mounted. Helicopters and transport planes with assault troops met in an isolated spot in central Iran ("Desert One"). The breakdown of 3 helicopters forced cancellation of the mission. During withdrawal 8 Americans were killed when a helicopter collided with a transport plane loaded with fuel. An official U.S. investigating board later severely criticized planning and command arrangements for the mission.

COMMENT. *The hostage crisis had already hurt American international prestige; the U.S. government appeared to all the world as being weak and irresolute. The failed rescue mission reinforced these assessments.*

1981, January 20. Release of the U.S. Hostages. The 52 Americans held hostage in Iran were released in return for U.S. agreement to free Iranian assets frozen in the U.S. following seizure of the U.S. embassy in Teheran.

1982, April 7–19. Plots Uncovered: Attempted Coup Foiled. Foreign Minister **Sadegh Ghotbzadeh** and several Iranian army officers were arrested for planning a coup and the assassination of Ayatollah Khomeini. They were subsequently tried and executed.

1989, June 3. Death of Ayatollah Khomeini. Sayyed Ali Khamenei, then serving as president of the republic, succeeded Khomeini as *rabhar* (spiritual guide).

1990, September. Iranian Response to the Kuwait Crisis. The Iranian government firmly opposed the invasion of Kuwait, and supported the U.N. embargoes, but also opposed U.N. military operations against Iraq. Iraqi foreign minister Tariq Aziz visited Teheran to consolidate the peace arrangements (September 9), and these were substantially completed in October. Iran reopened diplomatic relations with Great Britain (September 27), as part of an effort to normalize relations with Europe.

SOUTH ASIA

India

1975, February 25. Sheik Mohammed Abdullah Reinstated as Chief Minister of Kashmir. The Indian government reinstated the "Lion of Kashmir" as the senior official in the Indian sector of the disputed province 22 years after removing him from power (see p. 1404). Pakistan claimed that this abrogated a 1972 agreement to maintain the status quo (see p. 1408).

1975–1979. Tribal Revolts in Northeast India. Government troops carried out counterinsurgency operations against tribal rebels seeking independence for Mizoram and Nagaland. The Nagas ended their 20-year rebellion in exchange for a general amnesty (November 11). Despite losses exceeding 1,000 per year the Mizos continued their guerrilla war against India.

1975–1976. Border Incidents and Strained Relations with Bangladesh. **(See p. 1522.)**

1975, October 20. Border Clash with China. Both India and China claimed the other side had violated the frontier.

1979, January 5. Resumption of Naga Insurgency. Nagas raided from Nagaland into neighboring Assam state. They demanded that parts of Assam should be ceded to Nagaland.

1979, April 20. Parliamentary Request for Atomic Weapons Rejected. The Indian government turned down a request from its parliament to produce atomic weapons to meet the possible threat of Pakistan's manufacture of these weapons.

1981, April 26. India Threatens Nuclear Weapons Production and Deployment. K. Subrahmanyam, a military adviser to the Indian government, stated that the threat posed by a possible Pakistani deployment of nuclear weapons warranted India's production of these weapons.

1981, November 3–23. India-Pakistan Border Incidents. There was an increase of border incidents as tensions rose because of military aid received by Pakistan from the U.S. and because of Indian fear of Pakistan achieving nuclear capabilities.

1979–1982. Indian Troops Battle Insurgents in States. Indian army units carried out widespread counterinsurgency or riot suppression operations in Assam, Gujerat, Manipur, Mizo, Tripura, and Bombay.

1982, May 17–20. Indian-Sino Border Talks Held. India and China held border talks concerning disputed territories in the Ladakh region of Kashmir, which was under control of the Chinese, and along the border of Bhutan under Indian control.

1983, April 6. Troops Restore Order in Assam. Indian army troops were needed to re-

store order in Assam, racked by struggles between Assamese and Bengali immigrants.

1983, June 7. Punjab Disturbances Require Paramilitary Troops Intervention. Civil disturbances caused by rival Sikh and Hindu groups required the intervention of central government paramilitary troops to maintain order.

1984, June 6. Storming of the Golden Temple in Amritsar. Sikh guerrillas under **Sant Jinhar Singh Bhindranwale,** seeking increased autonomy from India, occupied this Sikh holy shrine. They were assaulted by the Indian Army in a bloody operation that left over 400 Sikhs dead, including Bhindranwale. This not only made him a martyr for Sikh patriotism, it increased support for the radicals among moderate Sikhs, and led to increased sectarian violence in Punjab.

1984, October 31. Assassination of Indira Ghandi. The prime minister of India was murdered at her residence in New Delhi by two of her Sikh bodyguards, who were afterward killed by police. This may have been a response to the Golden Temple assault. **Rajiv Ghandi,** the prime minister's son, succeeded her in that office.

1987, May. Direct Rule Imposed on Punjab. After 2½ years of sporadic efforts at moderation and reconciliation, continuing guerrilla actions in Punjab caused Prime Minister Rajiv Ghandi to declare direct rule from New Delhi over Punjab. This restored some degree of order, but alienated many Punjabis.

1988, May. Siege of the Golden Temple. Indian security forces besieged Sikh guerrillas at the Golden Temple complex in Amritsar, killing 46. Guerrilla attacks continue.

1988, November. Coup Attempt in Maldives Thwarted. An effort by Tamil guerrillas from Sri Lanka to overthrow the government of the Maldives was blocked by Indian paratroopers.

1990, January–April. Unrest in Kashmir. Demonstrators clashed with police, and government forces imposed curfews, as secessionist sentiment grew in Kashmir among the Moslem majority. Indian security forces fired into a crowd of demonstrators, killing at least 32 (March 1).

1990, November 28. Direct Rule in Assam. Following separatist violence in this northeast Indian state, New Delhi imposed direct rule in an effort to restore order.

Pakistan

1975, February 5–28. U.S. Military Aid Strains India-Pakistan Relations. U.S. President **Gerald Ford** lifted a 10-year arms embargo to Pakistan. India protested that this would encourage Pakistan's Prime Minister **Zulfikar Ali Bhutto** in a bellicose anti-Indian policy. India was not placated when subsequently the U.S. lifted its arms embargo against India (February 24).

1975, February 8–March 4. Unrest in Northwest Frontier Province Charged to Afghanistan. Pakistan alleged that Afghanistan was responsible for subversion and collusion with Pakistani dissidents.

1976, February 25. Pakistan Purchases French Nuclear Reprocessing Plant. Foreign arms control analysts interpreted this as a reaction to India's successful nuclear detonation (May 18, 1974). (See p. 1516.)

1976, September 3–10. Kohistani Tribal Revolt Smashed. More than 10,000 troops with armor and air support were necessary to suppress the revolt.

1977, April 21. Martial Law Imposed in Three Cities. Prime Minister **Ali Bhutto,** who was being accused of election corruption, responded to increased violence and unrest by imposing martial law in Karachi, Lahore, and Hyderabad. The martial law decree was later declared unconstitutional by the Supreme Court of Pakistan (June 3) and was lifted 3 days later (June 6).

1977, July 5. Military Coup d'Ėtat. Growing unrest, and the election corruption charges, led to a military takeover by Army Chief of Staff General **Mohammed Zia ul-Haq.** Prime Minister Bhutto, as well as opposition party leaders, were jailed; martial law was imposed. Bhutto was soon released. Zia promised to hold elections in October, but soon reneged on this pledge.

1977, September 5. Bhutto Arrested and Charged with Murder. The former Prime Minister was tried and convicted of ordering the murder of a political foe (March 18, 1978).

1979, April 4. Execution of Ali Bhutto. General Zia rejected foreign appeals for clemency.

1979, April 6. U.S. Cuts Military Aid to Pakistan. This was based upon evidence that Pakistan was attempting to develop a nuclear weapons capability. Pakistan denied the charge, asserting only an interest in development of nuclear power for peaceful purposes (April 18). Subsequent talks failed to persuade the U.S. to change its position (October 17–18).

1980, January 15. U.S. Reverses Position on Military Aid. The Soviet Union's invasion of Afghanistan prompted a reversal of the U.S. position on military aid to Pakistan. Despite misgivings about Pakistan's nuclear development intentions, the U.S. offered $400 million in military aid to Pakistan. The U.S. also announced its intent to invoke a 1959 Security Treaty permitting the U.S. to intervene militarily if Pakistan were invaded by the U.S.S.R. Pakistan's President Zia welcomed the pledge but rejected the military aid offer as insignificant.

1980, September 26. Soviet Helicopters Violate Pakistan Border. Pakistani authorities charged that Soviet helicopter gunships violated Pakistani territory and attacked Pakistani troops. Pakistan asserted that this was only one of several such violations since the Soviet invasion of Afghanistan.

1981, March 23–April 21. U.S. Renews Military Aid to Pakistan. The U.S. government offered Pakistan $500 million in military aid to meet the security challenge posed to Pakistan by the Soviet invasion of Afghanistan.

1981, October 16. Pakistan Offers Renunciation of War Treaty with India. India rejected the offer by President Mohammed Zia ul-Haq, dismissing it as a propaganda move (November 11).

1981, November 25. Pakistan Threatens to Develop Nuclear Weapons Capacity. Western press sources reported that Pakistan's President Mohammed Zia ul-Haq told visiting Turkish journalists that Pakistan was striving to develop nuclear weapons because this was the only way to survive militarily and politically in the present international milieu.

1982, January 29–31. Treaty Talks with India. The Indian government reversed its opposition to Pakistan's proposal for a nonaggression treaty and began negotiations with Pakistan in the hopes of arriving at a genuine rapprochement. However, India withdrew from the negotiations because of anti-Indian remarks made by a Pakistani diplomat at the U.N. (February 25).

1988, August 17. Death of President Zia. He and 28 senior officials were killed when their plane crashed under mysterious circumstances. Rumors circulated that this was the work of dissident KHAD (Afghanistan's secret police) or KGB agents.

1988, November 16. Bhutto Wins Elections. Benazir Bhutto, daughter of executed prime minister Zulkifar Ali Bhutto, led the left-populist Pakistan People's Party (PPP) to victory in the first free general elections since 1973, and Bhutto became the first female prime minister of an Islamic country (December 2).

1990, August 6. Bhutto Dismissed as Prime Minister. President Ghulam Ishaq Khan, supported by the armed forces, accused Bhutto of "corruption and nepotism," and dismissed her after 20 months in office. He also declared a state of emergency, and authorized the military to seize the national TV station and telephone system. Bhutto characterized the action as a "constitutional coup" by conservative Islamicists and the military.

Afghanistan

1975, August 30. Economic Assistance Agreement with the U.S.S.R. Under this agreement Afghanistan was to receive economic aid for 30 years.

1978, January 1–March 1. Cooled Relations with Soviets. President Daoud (see p. 1409) became concerned about growing Soviet influence and drastically reduced the number of Soviet advisers from about 1,000 to 200.

1978, April 27–28. Marxist Coup. Daoud was overthrown and killed in a Soviet-backed coup by **Noor Mohammad Taraki,** who began a

forced modernization and reeducation program. This program was resented and opposed by most Afghans. Between 8,000 and 12,000 opponents were ruthlessly killed.

1979, February 14. U.S. Ambassador Killed. Ambassador **Adolph Dubs,** taken hostage by Moslem extremists, was killed in a gun battle when Soviets and Afghan authorities stormed the hotel where Dubs was being held. The U.S. State Department, which had urged caution, protested the role the Soviets played in the affair.

1979, March 27. Amin Becomes Premier. President Taraki named **Hafizullah Amin** as Premier. Although the Communist party tightened control over the government, popular resistance grew into full-scale rebellion. Many deserters from the Afghan Army joined rebel groups (called *mujahedeen* freedom fighters or holy warriors), who gained control of 22 of Afghanistan's 28 provinces.

1979, September 16–18. Taraki's Downfall. Amin overthrew Taraki, who was slain in a gun battle. Amin's coup was apparently accomplished without Soviet approval. Friction grew between Amin and his Soviet advisers.

Soviet Invasion of Afghanistan

1979, December 1–16. Soviet Buildup. The Soviets increased the size of their garrisons at the two air bases in Kabul, and began secret preparations for the ouster of Amin. A partial mobilization of Soviet troops just north of Afghanistan was quietly initiated. The Kremlin apparently feared that the mujahedeen would overthrow Amin and end Soviet influence in Afghanistan, and were determined to prevent this at any cost.

1979, December 24. Soviet Seizure of Kabul Airport. This was done by special Soviet forces, directed by First Deputy Minister of Internal Affairs (MVD) Lieutenant General **V. S. Paputin.**

1979, December 25–28. Occupation of Kabul. A massive airlift of Soviet troops began Christmas Day. Three airborne divisions—103rd, 104th, and 105th—were flown in while 4 motorized rifle divisions invaded Afghanistan overland from the north. The 105th Division occupied Kabul against considerable resistance from elements of the Afghan Army and the local population. Amin and his ministers were isolated in his palace. A Soviet task force attacked the palace and Amin was killed, either in the fighting or by execution. General Paputin was also killed during the battle.

1979, December 28. Karmal Installed As President. Amin's former Vice President, **Babrak Karmal,** now ambassador to Czechoslovakia, was recalled by the Soviets to become President.

COMMENT. *The Soviet invasion of Afghanistan inflamed world public opinion. The Soviet move assured that the U.S. Senate would refuse to ratify the Strategic Arms Limitation Treaty (SALT II Treaty) that had been signed by Presidents Carter and Brezhnev the preceding spring (see p. 1485). President Carter enacted a grain embargo against the Soviet Union and canceled U.S. participation in the 1980 Summer Olympics, which were to be held in Moscow.*

1980, January–February. Popular Resistance Intensifies. Following the initial success of the December coup, opposition to the Soviets became widespread and fierce. Convoys were ambushed and numerous armored vehicles were destroyed. Several towns held by the Soviets were surrounded and besieged by mujahedeen. Soviet activities were constrained by the severe weather conditions that prevailed in Afghanistan in January and February.

1980, February 21–23. Uprising in Kabul. This was crushed by Soviet troops. About 500 Afghans were killed and another 1,200 jailed.

1980, March–April. Soviet Offensive. Soviet objectives were: (1) beseiged towns would be relieved, (2) the mujahedeen were to be driven from the fertile valleys and the strategic roadways that traversed them, (3) a security zone would be established on the border near the Khyber Pass, the route by which the mujahedeen were getting supplies and arms from Pakistan, and (4) all of the bases of resistance in the mountainous regions of Afghanistan were to be eliminated.

1980, March 1. Phase One. The Soviets employed MiG-21s to strafe rebel positions with napalm and rockets. Then Mi-24 Hind helicop-

ters showered mujahedeen positions with more napalm and rocket fire. Next Mi-6 Hook helicopters dropped airborne assault troops on the positions. All Soviet garrisons were soon relieved and the remaining mujahedeen driven into the hills.

1980, April–May. Phases Two and Three. In order to drive the mujahedeen from the valleys and win control of strategic roadways the Soviets used combined arms, air-land attacks, featuring Mi-24s. Although these attacks met with strong resistance and the mujahedeen were able to inflict heavy casualties on the Soviets, they were forced to withdraw to the hills with heavy losses. A security zone was soon established, but the Soviets were unable to prevent the movement of supplies and arms from Pakistan, nor were they able to prevent mujahedeen raids in the strategic valleys.

1980–1985. Continued Afghan Resistance. Gradually the Soviets increased the size of their forces from 85,000 to 105,000, but were unable to break the resistance movement. The rebels continued to attack Soviet convoys and supply lines with considerable success. These attacks enabled the mujahedeen to acquire badly needed arms and ammunition, in addition to supplies from Pakistan. The Soviets mounted numerous offensives, inflicting heavy casualties on the Afghan resistance fighters, but themselves suffered severe casualties from guerrilla attacks and ground operations. The Soviets not only were not able to pacify the mountain areas but were unable to maintain uninterrupted control of the rural valleys. Afghanis alleged that the Soviets used chemical and biological weapons in Afghanistan, in violation of the 1925 Geneva Protocol and the 1972 Geneva ban on the manufacture of biological weapons. The U.S. Department of State also alleged Soviet use of illegal biochemical weapons. The mujahedeen were hampered by religious and tribal rivalries and shortages of arms, equipment, and ammunition. They were unable to create a single political opposition group or a unified command structure. The Soviets, despite setbacks and high casualties (estimates of Soviet casualties by 1984 were about 15,000), showed no signs of giving up in Afghanistan. They expanded the runways at 19 airports and constructed new airports at Kandahar, Herat, Dadadhshan and Mazarree Sharif, as well as a base in the Wakhan corridor near the Chinese border. In 1984, the air bases, in easy range of the Persian Gulf and the Indian Ocean, held an estimated 400 planes, including MiG-23s and Ilyushin-38s.

1985, May. Rebel United Front. Seven major rebel guerrilla groups met in Peshawar, Pakistan, to lay the groundwork for a united front.

1986. Increased U.S. Aid to Rebels. As Soviet offensive operations against the rebels intensified, the U.S. increased its aid, funneling sophisticated weapons like Stinger shoulder-launched surface-to-air missiles to the rebels through Pakistan. The rebels were able to frustrate several Soviet operations, as the fearsome Mi-8 Hip and Mi-24 Hind helicopter gunships were especially vulnerable to Stingers. The Soviets begin to suffer from war-weariness; veterans returning to civilian life reported posttraumatic stress syndrome; their protests of poor treatment echoed the complaints of many U.S. Vietnam veterans.

1986, May 4. Najibullah Replaces Karmal in Coup. Mohammed Najibullah, former head of the KHAD secret police, replaced Babrak Karmal as secretary general of the People's Democratic Party of Afghanistan (PDPA) in a bloodless coup. The following year Najibullah was elected to a 7-year presidential term (November 1987).

1986, October. Najibullah's Reconciliation Policy. After a meeting with Soviet leader Mikhail Gorbachev, Najibullah announced a policy of national reconciliation, offering a unilateral cease-fire and limited government power-sharing to the rebels in an effort to end the civil war. The offer was rejected.

1988, February. Soviet Withdrawal Planned. Contingent up on success of talks between Pakistan and Najibullah by March 15, the Soviets announced they would begin withdrawing all their forces from Afghanistan by May 15, 1988. They expected their withdrawal to take 10 months.

1988, April 14. Geneva Accords between Pakistan and Afghanistan. This followed a meeting between Gorbachev and Najibullah in Tashkent.

1988, May 15–1989, February 15. Soviet Withdrawal. An orderly disengagement was completed in 9 months without serious problems. (See p. 1494.) Soviet advisors remained in Afghanistan, and continued to support the Najibullah regime with some $500 million in supplies and weapons every month.

1989, February 19. Najibullah Declares Martial Law. Najibullah reconstructed his government, increasing the role of the PDPA and sharply favoring the hard-liners.

1989, July. Rebel Repulse at Jalalabad. This reverse showed that common expectations of a postwithdrawal government collapse were misplaced.

1990, October. Rebel Offensive. Tarin Kowt (capital of Oruzgat province) and Qalat (capital of Zabol province) fell in the first weeks. Otherwise the situation was little changed. The rebels controlled the countryside, but lacked both the heavy weapons and the necessary organization and command structure to capture the cities. Despite control of major cities, the government could accomplish little.

Sri Lanka

1977, February 15. State of Emergency Ended. A state of emergency, which had been imposed during the PLF revolt 6 years earlier, was lifted (see p. 1409).

1981–1984. Racial Violence, Civil Disturbance, and Insurgency. Racially motivated violent clashes between the Sinhalese majority and the Tamil minority intensified. A state of emergency was declared (August 17, 1981). However, violence continued, and Tamil insurgents frequently attacked government troops.

1983. Tamil-Sinhalese Violence. Efforts of the Tamil minority, concentrated in the north and east of the country, to gain greater autonomy led to widespread violence. The government again imposed a state of emergency (July). By year's end several Tamil guerrilla-terrorist groups were active; the major group was the Liberation Tigers of Tamil Eelam (LTTE).

1984–1987. Tamil Violence Continues. Government forces were unable to restore order, and Tamil-Sinhalese sectarian violence continued despite attempted mediation by India.

1987, June. Government Forces Attack Jaffna. After a Tamil terrorist attack in Colombo killed hundreds (April 17), President **Jayawardene** activitated army reserve forces (May) and ordered a major attack on the rebel-controlled city of Jaffna.

1987, July 29. Indian-Brokered Settlement. Under pressure from Tamil groups in India (who were supplying the LTTE), the Indian government pressured Sri Lanka to accept a "settlement" involving withdrawal of Sri Lankan army troops from the Jaffna area, and limited autonomy to the Tamils in exchange for the surrender of arms. The LTTE refused this agreement, and Indian army troops were committed as peacekeeping forces. Radical Sinhalese nationalists began a guerrilla-terrorist campaign against government forces, complaining that the government had yielded too much to the Tamils and India.

1988. Indian Peacekeeping Efforts. In early 1988 Indian forces (about 50,000 men in 4 infantry divisions, plus support units) mounted a series of operations against LTTE forces, including an unsuccessful airborne assault on Jaffna.

1989–1990. Continuing Violence. Despite a cease-fire with the LTTE (May), violence continued. The total death toll for the 6-year civil war reached at least 11,000, including 1,000 Indians (December).

1989, August. India Announces Troop Withdrawal. In response to Sri Lankan pressure, the main withdrawal began in October. Within 6 months the last troops withdrew, effectively leaving northern and eastern Sri Lanka in the hands of Tamil rebels (March 24, 1990).

1990. LTTE-Government Fighting Renewed. The LTTE ended a 13-month truce with attacks on 10 police stations (June 14). Following another brief cease-fire were months

of hard fighting with over 2,200 combatants killed. Tamil forces expanded the war by striking at hitherto neutral Moslem communities (August 3, 12). The LTTE announced a unilateral cease-fire (December 31), and indicated willingness to hold peace talks with the government in 1991.

Bangladesh

1975, August 15. Coup d'État. Minister of Commerce **Khandakar Mushtaque Ahmed,** supported by army officers, led a successful coup which toppled the government of Sheik **Mujibur Rahman,** President and founder of Bangladesh. (See p. 1409.) Mujibur was killed. Martial law was established (August 20).

1975, November 3–6. Military Coup d'État. Major General **Ziaur Rahman** overthrew President Moshtaque. Rahman appointed former Bangladesh Supreme Court Chief Justice **Abu Sadat Mohammed Sayem** president, who appointed a 3-man advisory Council of Armed Forces Chiefs. Continuing internal unrest and border violations were blamed on India, which denied complicity.

1975–1991. Unrest in the Chittagong Hill Tracts. Guerrilla warfare resulted from native resentment of Bengali immigration.

1976, November 29–30. Martial Law Proclaimed. General Ziaur Rahman became virtual dictator.

1977, April 21–May 29. Rahman Consolidates Power. Bangladesh President Sayem resigned, and named General Rahman to succeed him. A national referendum approved Rahman's martial law government by a 99 percent majority (May 29).

1977, October 2. Coup Attempt Fails. Rahman's troops defeated dissident insurgents in a brief but bloody battle. Leaders of the coup were tried and executed (October 27).

1979, April 7. Martial Law Ends. Bangladesh President Ziaur Rahman announced the end of martial law, and promised the return to civilian rule.

1979, April 18. Accord with India Reached. Bangladesh reached an agreement with India on a number of issues that had caused strained relations between the two countries.

1981, May 30–June 2. Rahman Murdered in Coup Attempt. President Ziaur Rahman was killed in Chittagong. However, loyal troops put down the revolt led by General **Manzur Ahmed,** who was killed. Other leading conspirators were tried later. Vice President **Abdus Sattar** took office as President and later won a national presidential election (November 15).

1982, March 25. Coup d'État. Army Chief of Staff General **Hossein Mohammed Ershad** seized power in a bloodless coup. He later assumed the office of President (December 11).

1986, August. Ershad Retires from Military Command. Following his party's electoral victory (May), General Ershad retired from his military posts. He handily won the presidential election (October), securing 84 percent of the vote.

1986, November. End of Martial Law. Following his electoral victory, Ershad restored the constitution.

1989, July–November. Campaign to Force Ershad's Resignation. Following local election violence (February–March), opposition parties demanded Ershad's resignation (July 12). Responding to mounting demonstrations, Ershad imposed a state of emergency (November 27).

1990, December 4. Ershad Resigns. The opposition parties selected Supreme Court Chief Justice **Shahabuddin Ahmed** as interim president (December 5). Ershad and his wife were arrested (December 12).

Nepal

1989, March. Trade Dispute with India. The expiration of a trade and transit treaty with India triggered a dispute. India closed all but 2 of 15 crossing points. Part of the problem was Nepal's recent purchase of Chinese arms.

1990, April 6–19. Democratic Revolution. Troops and police killed 63 persons during a pro-democracy demonstration in Katmandu (April 6). King **Birendra Bir Bikram Shah**

Deva bowed to political pressure and lifted a 29-year ban on political parties (April 8). **Krishna Prasad Bhattarai** was appointed as prime minister (April 19) and inaugurated Nepal's first independent government in nearly 3 decades.

SOUTHEAST ASIA

Burma

The principal threats to Burma during the period 1975–1985 were internal. The guerrilla activities of the Kachin, Karen, and Shan separatist factions threatened the continued existence of the Socialist Republic of the Union of Burma. Communist guerrillas, especially active in the Shan State and supported by the People's Republic of China (PRC), and student unrest threatened the continued dominance of Burma's sole legal political organization, the Socialist Program Party.

1975–1991. Continuous Guerrilla Warfare in Burma. Burmese government troops continued to battle Communist and tribal insurgents (see p. 1411). The People's Republic of China supplied rebels with arms and equipment while maintaining tolerable relations with Burma. Some of the rebel groups funded their activities by growing and selling opium, and the political situation hampered drug control efforts.

1983, October 9. Korean Officials Killed in Terrorist Bombing. A bomb explosion during a state visit by South Korean President Chun Doo Hwan killed 4 members of his cabinet and 13 other South Korean officials. Chun, apparently the target, arrived just after the explosion. A Burmese investigation found North Korea responsible. Burma severed relations with North Korea.

1987, September. Student Riots. Students protesting the one-party regime of General Ne Win rioted following clashes with police.

1988, July. Ne Win Resigns. Under intense popular pressure, he resigned the presidency and chairmanship of the State Council to make way for a democratic civilian government. **Aung San Suu Kyi,** daughter of dead national hero and leader Aung San, played a prominent role in the democratic movement until her arrest (July 1989).

1988, September 18–28. Military Coup. After President Maung Maung's announcement of elections (September 10), the Army and its National Unity Party allies deposed the civilian government (September 18). General **Saw Maung,** an ally of Ne Win, headed a military junta. The official death toll was 263, but foreign diplomats estimated casualties in the thousands.

1989, July. Mass Arrests. Responding to continuing demonstrations for democracy, the Saw Maung regime arrested hundreds of protestors, but promised elections in April or May 1990.

1990, May 27. Elections. The National League for Democracy, led by Aung San Suu Kyi, won a landslide victory in National Assembly elections.

1990, July–December. Government Crackdown. Ruthless suppression of demonstrations and dissent by the Saw Maung regime virtually voided the May election results, since the junta refused to convene the Assembly.

Thailand

The post–Vietnam War period was marked by coup attempts against the ruling military clique, military operations against Communist guerrillas along the Thailand-Malaysia border, and increasing tensions along the Thailand-Kampuchean border. Vietnamese invasion of Kam-

puchea and the overthrow of the Pol Pot regime posed the gravest threat to Thailand. The Kampuchean refugee problem strained Thai resources, while armed incursions by Vietnamese troops and their Kampuchean allies resulted in the Thai military confronting a foreign enemy for the first time since the withdrawal of Thai troops from Vietnam. In the aftermath of Vietnam, U.S. aid was limited to arms, munitions, and equipment. The member states of the Association of Southeast Asian Nations (ASEAN) provided Thailand with financial and nonmilitary aid, as well as diplomatic and moral support.

1975–1980. Border Clashes with Laos. There were a number of border clashes with Laos varying in size and intensity.

1975–1978. Border Clashes with Cambodia. **(See p. 1527.)**

1975–1976. Thai Troops Battle Communist Insurgency. Government troops continued to carry out counterinsurgency operations against Thai guerrillas, mostly in southern Thailand, but also in the northeast. The government claimed that the guerrillas had been trained and were receiving aid from China, Cambodia, and Vietnam.

1975, May 14–19. Thai Protest against American Use of Thai Bases. Thai officials were furious because the U.S. used Thai bases as a staging area for the *Mayaguez* rescue operations (see p. 1527). The U.S. government issued a formal apology, which Thailand accepted (May 19).

1975–1976. U.S. Withdrawal from Thailand. The U.S. began to withdraw planes and troops (June 6–7). All U.S. planes were withdrawn from Thailand before the end of the year (December 19). All troops were withdrawn the following year (June 20).

1976, October 8. Military Coup. The return of exiled former Premier **Thanom Kittikachorn** (September 19) led to demonstrations and riots by university students (October 4–6). To restore order, a military coup was led by Admiral **Sangad Chaloryu. Thanin Kraivichien** (a civilian) was appointed premier, but Admiral Chaloryu retained control as defense minister.

1975–1977. Thai-Malaysian Counterinsurgency Cooperation. Thailand and Malaysia agreed to cooperate in counter-insurgency efforts against Communist insurgents in the Kra Isthmus (April 11, 1975). After initial cooperative successes, the two countries later agreed that forces of either country could cross their common border to pursue guerrillas and pledged to continue joint counterinsurgency operations (March 4, 1977). Another major success was achieved later in the year in southern Thailand near the Malaysian border (July–August).

1977, March 26. Attempted Coup. General **Chalard Hiranyasiri** failed in his attempt to gain power.

1977, October 20. Military Coup. Defense Minister Admiral Sangad Chaloryu seized control in a bloodless coup.

1978, July 15. Thailand and Cambodia Agree to End Border Hostilities. After neary 4 years of numerous armed border clashes of varying size and intensity, the Thai and Cambodian governments agreed to end their border conflict and exchange envoys.

1979–1984. Vietnamese Incursions into Thailand. Vietnamese troops clashed with Thai troops on a number of occasions while pursuing Cambodian guerrillas. (See p. 1525.)

1980, June 15–July 23. Border Clashes with Laos. Despite earlier agreements to end hostilities, incidents continued, mostly provoked by the Laotians.

1991, February 6. Coup d'État. Citing government corruption (but probably more unhappy with the government's rapprochement with Vietnam, and the declining role of the armed forces in Thai politics), General **Sunthorn Kongsompong** imposed direct military rule.

Vietnam

The victory of the Socialist Republic of Vietnam (April 1975), and the reunification of the nation, did not bring peace to the Vietnamese people. While invading and occupying Kampuchea, at the same time Vietnam fought off a limited Chinese invasion of the northern provinces of Vietnam. Vietnamese operations against the Khmer Rouge led to violation of the Thai frontier and skirmishes with Thai forces. Ongoing involvement in Kampuchea further isolated Vietnam from its Southeast Asian neighbors, while the unresolved issue of U.S. troops missing in action (MIA) prevented normalization of relations with the U.S.

1975–1977. Border War with Cambodia. Vietnamese troops clashed repeatedly with troops of the Khmer Rouge Communist regime in Cambodia.

1976, July 2. North and South Vietnam Officially Reunited. The North Vietnamese Communist regime completed the reunification of the country, establishing the Socialist Republic of Vietnam.

1977, November–December. Vietnamese Invasion of Cambodia. Vietnam forces crushed a Cambodian division at Snoul (November 18–19), then halted its advance 10 miles inside the Cambodian border (December 3). The Vietnamese soon resumed the offensive and drove 70 miles into southern Cambodia before halting (December 21). At the same time, Vietnam denounced the atrocities the Khmer Rouge had committed against the population of Cambodia (see p. 1527).

1979, January 2–15. Renewed Vietnamese Invasion of Cambodia. In reaction to the Pol Pot regime's war of extermination against the Kampuchean rebels and the Cambodian civilian population, Vietnam invaded Cambodia. The Vietnamese quickly smashed Cambodian forces in 6 provincial capitals and captured Phnom Penh, the Cambodian capital, where they established a puppet regime. Pol Pot's forces were crushed, but maintained several pockets of resistance in the Cambodian countryside.

1979, February 17–March 15. Chinese Invasion of Vietnam. Before dawn, 25,000 Chinese troops and 1,200 tanks crossed the Vietnamese border and penetrated Vietnamese territory from 12 to 20 miles deep. But then the drive slowed. It is, however, unclear whether the Chinese slowed their offensive because of effective Vietnamese resistance or because the Chinese deliberately stopped their advance (as they claimed). No further major actions were fought. The Chinese began to withdraw, proclaiming they had accomplished their mission (March 5). They announced that the withdrawal was completed 10 days later. No reports of losses were given by either side, but Vietnamese losses probably exceeded those of the Chinese.

1979–1989. Vietnamese Counterinsurgency Operations in Cambodia. Vietnamese forces and their Cambodian allies conducted largely successful counterinsurgency operations against the forces of Pol Pot's deposed Khmer Rouge regime, taking a major headquarters and driving many Khmer Rouge troops into Thailand (March 16–31, 1979). Nonetheless, strong pockets of guerrilla resistance remained, both Khmer Rouge guerrilla forces of Pol Pot and forces loyal to Prince Norodom Sihanouk as well (see below and p. 1527).

1979–1991, Strained Relations with Thailand. Because of the Vietnamese invasion of Cambodia, large numbers of Cambodians fled to neighboring Thailand. Vietnam charged Thailand with aiding rebels, while Thai officials charged Vietnam with genocide in Cambodia. Vietnamese incursions into Thailand caused tensions between the two nations (see p. 1524).

1979, April 9–1980, March 6. Chinese-Vietnamese Reconciliation Talks. No real progress was made; relations remained strained.

1979, July–1983, April. Border Incidents with China.

1980–1991, Low-Level Insurgency in South Vietnam. Soldiers of the former Army of the Republic of Vietnam continued to conduct small-scale guerrilla operations against the Communist regime.

1989. Withdrawal from Cambodia. Hoping to reduce military commitments (and strain on their failing economy), and hoping to ease tension with Thailand, the Vietnamese unilaterally withdrew from Cambodia. Vietnamese advisers and technicians remained in Cambodia to aid government efforts against the Khmer Rouge and Sihanouk's forces.

1989, October–November. Partial Soviet Withdrawal from Cam Ranh Bay. The Soviets withdrew their MiG-23 fighters and Tu-16 bombers from the airbase, leaving 6 to 10 military aircraft.

Laos

Soon after gaining control of the country, the Pathet Lao-dominated Lao People's Democratic Republic initiated military operations against the Meo, many of whom fled to Thailand and Burma. Firmly controlled by a pro-Vietnamese government, Laos served as a logistical base for Vietnamese operations in Kampuchea.

1975, May–August. Pathet Lao Consolidates Power. The Pathet Lao continued to be successful in the long civil war in Laos (see p. 1418). After securing key positions around Vientiane, the Pathet Lao agreed to a cease-fire (May 7). Soon after this, Pathet Lao troops took control of all of southern Laos (May 16–20). Prime Minister Souvanna Phouma ordered government troops to cease resistance to the Pathet Lao (May 23). The Royal Laotian Army and the Pathet Lao were unified (June 17). Two months later the Pathet Lao assumed control in Vientiane Province, giving them complete control of Laos (August 23).

1975–1980. Border Incidents with Thailand. **(See p. 1524.)**

1975–1977. Insurrection of Meo Tribesmen. Some 5,000 Meo tribesmen, formerly armed and trained by the U.S. Central Intelligence Agency, undertook guerrilla operations against Pathet Lao troops. The Meos inflicted heavy casualties on the Pathet Lao, despite Vietnamese assistance to the Pathet Lao.

1975, December 1–3. Laos Becomes a Socialist Republic. The ancient monarchy was ended and the rule of the Pathet Lao legitimatized.

1977, July 18. Friendship and Assistance Treaties with Vietnam. These legitimatized the presence of 40,000 Vietnamese troops already stationed in Laos.

1978, February 10–March 28. Counterinsurgency Operations Against Meo Tribesmen. Laotian troops and some 30,000 Vietnamese troops eliminated most resistance by Meo tribesmen and other dissidents. Nonetheless, strong pockets of guerrilla resistance remained.

1979, March 7–15. Chinese Border Incidents. Laotian authorities reported several incursions into Laos by Chinese troops.

1979–1983. Meo Accusations of Laotian and Vietnamese Use of Chemical Weapons. Meo tribesmen who had fled Laos charged that Pathet Lao and Vietnamese troops had used poison gas and biochemical weapons against them (November 3). These reports were repeated as guerrilla resistance continued.

Cambodia (Kampuchea)

The victory of the Khmer Rouge and the establishment of the Pol Pot government marked the beginning of the most tragic episode in Cambodian history. The brutal, repressive, and homi-

cidal policies of the government resulted in mass executions and mass starvation. This situation gave Vietnam a pretext for invasion. The overthrow of the Pol Pot regime and its replacement with the pro-Vietnamese government of **Heng Samrin,** the People's Republic of Kampuchea, however, did not end turmoil or suffering. Khmer Rouge guerrilla units, as well as those of "reactionary" groups, continued to resist the Vietnamese, when not engaged in fighting each other.

1975–1978. Khmer Rouge Massacres. Conducting what was tantamount to a war on the entire population, the Khmer Rouge government of Premier **Pol Pot** was responsible for the deaths of over 2 million people in its attempts to wipe out resistance to its rule.

1975–1978. Border Clashes with Thailand. There were numerous border clashes with Thailand varying in size and intensity. In part these stemmed from the large numbers of refugees seeking to escape the Khmer Rouge massacres. The two countries signed an agreement pledging to pacify their borders (July 19, 1978; see p. 1524).

1975, May 12–14. ***Mayaguez*** Incident. While in international waters some 60 miles off the coast of Cambodia, the American merchant ship S.S. *Mayaguez* was captured and its 39 crewmen taken prisoner by a Cambodian gunboat, then transported to the Cambodian port of Sihanoukville. Failing to win the release of the crew through diplomatic means, President Gerald Ford ordered U.S. Marines to conduct a rescue mission. After being airlifted to Thailand from bases in Okinawa and the Philippines, the Marines conducted a helicopter attack on Tang Island (off Sihanoukville) where the *Mayaguez* was thought to be held. At the same time, carrier aircraft attacked a nearby Cambodian air base and gunboats in Sihanoukville. In the course of the rescue operations, the Cambodians released the *Mayaguez* crewmen in a captured Thai fishing boat. The U.S. losses were 18 killed in action and 50 wounded. The Cambodians lost 17 aircraft and 3 gunboats and an unknown number of personnel.

1975–1979, December. Border War with Vietnam. **(See p. 1525.)**

1976–1978. Resistance to Khmer Rouge Builds. Defectors from the Cambodian Army, with Vietnamese support, formed a resistance movement called the Movement for Khmer National Liberation (April 21, 1976).

1979–1989. Vietnamese Invasion and Counterinsurgency Operations in Cambodia **(See p. 1525.)**

1979, October 4. Sihanouk Announces Formation of New Resistance Movement. Prince Norodom Sihanouk, former Cambodian chief of state in exile in Peking, announced the formation of a new resistance movement in opposition to both the Khmer Rouge guerrillas and the Vietnam-backed Kampuchean regime. The resistance movement was to be called the Confederation of the Khmer Nation. Later nominal coordination was established between the Confederation and Khmer Rouge guerrillas (June, 1982).

1989, January–July. Peace Initiaives. Promising negotiations toward a peaceful settlement of Cambodia's decades-long civil war failed in France (July 23–25), largely because of disputes on the role of the dreaded, still-powerful Khmer Rouge. Heavy fighting resumed, and continued inconclusively through 1990.

1989, April–September. Vietnamese Withdrawal. **(See p. 1526.)**

Malaysia

Continued activities of Communist guerrillas along the Thai-Malaysia border provoked numerous counterinsurgency operations, both unilateral and in conjunction with Thai forces,

weakening the Malaysian Communist party. By late 1983, many guerrillas had had enough and surrendered to either Thai or Malaysian forces.

1977, January 14–17. Combined Thai-Malaysian Guerrilla Operations. **(See p. 1524.)**

1977, March 4. Border Pact Signed with Thailand. **(See p. 1524.)**

1977, July–August. Combined Thai-Malaysian Guerrilla Operations. **(See p. 1524.)**

1989, December 2. End of Communist Insurgency. After 41 years of guerrilla war, the Communist party of Malaya agreed to end its insurgency. Some 1,200 guerrillas laid down their weapons, ending one of the longest-running guerrilla struggles in history.

Singapore

Singaporean military operations during this period were limited to anti-piracy patrols in the Philip Channel.

Indonesia

During the late 1970s and early 1980s Indonesia was engaged in a counterinsurgency effort against the *Frente Revolucionario Timorense de Libertacao e Independencia* (FRETILIN) in East Timor. In early 1978, Indonesia faced a new insurgency in West Irian: the Free Papua Movement, which sought independence for western New Guinea.

1975–1984. Guerrilla Warfare in Timor. Indonesian troops battled guerrillas in East Timor after the Revolutionary Front for Independent East Timor declared its independence from Portugal (November 28, 1975).

1975, November 29. Annexation of Timor. The Timor Democratic Union (UDT) declared that Timor had become part of Indonesia.

Philippines

The administration of President **Ferdinand Marcos** faced 3 serious internal challenges: a Moslem insurgency on Mindanao and in the Sulu Archipelago, led by the Moro National Liberation Front (MNLF) and its military wing, the Bangsa Moro Army; a Communist insurgency in Luzon led by the Communist party of the Philippines and its military wing, the New People's Army (NPA); and the growing opposition of the professional and working classes to both martial law and Marcos' dictatorial rule. Despite some successes against the MNLF and the NPA, and repressive measures against critics of the government, Marcos' control of the Philippines remained at risk.

1975–1991. Moslem Rebellion Continues in Southern Islands. **(See p. 1423.)** A series of government concessions and negotiated agreements reduced violence (1988–1990), but minor unrest and scattered fighting continued, especially in outlying areas.

1975–1986. New People's Army Guerrilla War. The Maoist New People's Army (NPA), a

successor to the Huks (see p. 1422), waged continual guerrilla war against government forces.

1976, February 20. SEATO Disbanded. The Southeast Asia Treaty Organization (SEATO), founded after the 1954 Geneva Conference (see p. 1414) in order to provide collective security for the region, formally came to an end with ceremonies in Manila.

1981, January 17. Marcos Pronounces End to Martial Law. This had been in effect over 9 years (p. 1423).

1983, August 21. Assassination of Aquino. President Marcos's main political foe, **Benigno Aquino,** was assassinated upon his return to Manila from a period of self-exile. Popular indignation flared in the Philippines because of suspicion that Aquino had been killed by soldiers on order of Marcos.

1985, November 3–4. Marcos Announces Election Plans. Under increasing pressure because of the Aquino assassination, Marcos announced a "snap" presidential election for February 7, 1986.

1986, February 7–24. Election and Overthrow of Marcos. Aquino's widow, **Corazon C. Aquino,** ran against Marcos. Fraudulent official election results declared Marcos the winner (February 15), but provoked public outcry and mass anti-Marcos demonstrations (February 16–23). When the army refused to obey Marcos' orders to attack the demonstrators, he fled the country for exile in the U.S. (February 24). Aquino became interim president, and reappointed **Juan Ponce Enrile** as defense minister and Lieutenant General **Fidel Ramos** as chief of staff. Both men had played key roles in deposing Marcos.

1986–1991. Continuing NPA Guerrilla War. To reduce support for the NPA, President Aquino made serious efforts at rural reform and offered repeated amnesty initiatives. By 1989–1990 these efforts, plus army pressure and bloody internal power struggles, had damaged the NPA. It could field only 19,000 armed fighters (down from over 25,000 in the mid-1980s), and turned increasingly to urban terrorism.

1989, May 13. U.S. Airmen Killed by NPA. Their bodies were found near Clark Air Force Base on Luzon. This reflected the NPA's new terrorist tactics, and exploited popular demonstrations against the U.S. bases in the Philippines.

1989, December 1–9. Attempted Coup. This was the most serious of 6 military revolts endured by the Aquino administration. Rebels seized military bases, TV stations, and buildings in the financial district (December 1). In heavy fighting, loyalist forces (supported morally but not physically by U.S. F-4 fighter-bombers from Clark AFB) gradually gained the upper hand. President Aquino declared a state of emergency (December 6), and the last rebels soon surrendered (in Manila December 7, on Cebu December 9). Casualties totaled at least 98 dead and over 500 wounded. The coup's suspected leader, cashiered Army Colonel **Gregorio Honasan** of the Reform the Armed Forces Movement (RAM), who had led a previous coup (November 1987) but escaped custody after his capture, remained at large.

1990, August–September. Terrorist Bombing Campaign. Over 20 bombs exploded over a 2-month period in Manila. These were generally regarded as an effort by dissident military officers in the RAM and YOU (Young Officers' Union) movements to destabilize the government.

1990, September 18–22. U.S.–Philippines Base Negotiations. These took place in Manila, in anticipation of early expiration of the current agreement (September 1991).

1990, October 4–6. Military Revolt. Some 200 soldiers, led by Colonel **Alexander Noble,** captured an outpost on Mindanao and declared the island an independent republic. The Air Force bombed their stronghold (October 5), and the rebels surrendered the next day.

Papua, New Guinea

1975, September 16. Independence from Australia.

1975–1976. Bougainville Separatist Movement. Island leader **John Momis** led a seces-

sionist movement, which conducted attacks on Papuan government installations and committed other acts of sabotage before arriving at a negotiated settlement with New Guinea Premier **Michael Somare** (March 26, 1976).

1978–1991. Low-level Insurgency in Western New Guinea (Irian Jaya; see p. 1528). Papua New Guinea is not officially involved (nor does the government back the anti-Indonesia insurgents), but Indonesian actions against the insurgents have strained relations between Indonesia and Papua. In part because of this ongoing security problem, Australia maintains a permanent military presence in Papua.

EAST ASIA

China (People's Republic)

1976, September 9. Death of Mao Zedong. The death of the original leader of China's Communist party, theoretician of guerrilla warfare, and founder of the People's Republic of China, provided an opportunity for the emerging pragmatic leadership of the Communist party to turn away from idealism to practicality in the affairs of the most populous nation on earth. The most powerful man in the New China soon became **Deng Xiaoping,** whose position of strength was finally consolidated when he forced Mao's immediate successor, **Hua Guofeng,** to resign as Premier (September 4, 1980).

1979, January 1, Diplomatic Relations with the United States. This was a major diplomatic triumph for the P.R.C. The U.S. agreed to withdraw diplomatic recognition from the Nationalist Government of Taiwan, and to abrogate its defense treaty with the N.R.C. The U.S. accepted the status of Taiwan as a province of China, and the P.R.C. agreed that it would not use force to regain control over Taiwan.

1979, February 17. Invasion of Vietnam. (See p. 1525.)

1980, May 18. China Test-Launches ICBM. The Chinese made their first successful test-launch of an ICBM; the missile traveled 6,200 miles.

1987, January 1–5. Widespread Student Demonstrations. Thousands of student in 11 Chinese cities demonstrated peacefully for more democracy and freedom of expression.

1989, April–May. Student Unrest in Beijing. Crowds of students and supporters marched through the city and congregated in T'ienanmen Square, demanding more democratic freedom. Troops were assembled in and near the city, but violence was avoided by both sides. Martial law was declared (May 20).

1989, June 3–4. Bloodshed in T'ienanmen Square. Large bodies of troops, assembled in the outskirts of the city, converged on the square, overwhelming sometimes serious resistance at street barricades with tanks and small arms fire. Estimates of deaths range from a few hundred to more than 1,500. The government's brutal suppression of the demonstration was protested by many nations, including the U.S., which severed all official contact with the Chinese government, short of breaking diplomatic relations.

Taiwan (National Republic of China)

1975, April 5. Death of Chiang Kai-shek. He was succeeded as President of the N.R.C. by his son, **Chiang Ching-kuo.**

1979, January 1. Abrogation of Diplomatic Relations and Treaties with United States. The U.S. took this step in order to establish diplomatic relations with the People's Republic of China (see above). But semi-diplomatic relations were retained through liaison offices, and the practical effect of the change was initially negligible.

1982, July 17. U.S. Fighter Plane Co-production Agreement with Taiwan. U.S. President Ronald Reagan signed an agreement

with Nationalist China extending the co-production of F-5E fighter planes by the two countries. The People's Republic of China promptly protested that this was a violation of the agreement by which diplomatic relations had been established.

1982, August 18. U.S. to Reduce Arms Supply to Nationalist China. U.S. President Reagan assured the P.R.C. that the U.S. would continue to reduce U.S. arms supplies to the N.R.C. on Taiwan.

1987, July 21. End of Martial Law. This had been imposed 38 years earlier, when the National Government fled to Taiwan from mainland China.

Tibet

1975–1984. Continued Guerrilla Warfare. There was continued low-level insurgency against Chinese rule in Tibet (see p. 1430).

1989, March 5–8. Unrest in Tibet. Troops fired on demonstrators demanding independence. Martial law was declared in Lhasa (March 7).

1990, May 1. Martial Law Lifted in Lhasa.

Mongolia

1990, March 14. Mongolia Ends Communist Dictatorship. A new multiparty political system, with free elections, was inaugurated.

North Korea

1975–1984. Naval Incidents and Continued Tense Relations Along Border with South Korea. (See below.)

1976, August 18. North Korean Assault on South Korean–U.S. Work Crew. North Korean soldiers, armed with metal pikes and axes, assaulted a South Korean–U.S. military personnel work team in the DMZ while they were trimming a tree in order to improve surveillance. Two U.S. Army officers were killed and 5 U.S. enlisted men were wounded. Another South Korean–U.S. work crew returned 3 days later and cut the tree down.

South Korea

1975–1984. Clashes with North Korea. There were a number of border incidents and clashes between the North and South Korean navies.

1976, August 18. North Korean Assault on South Korean–U.S. Work Crew. (See above.)

1977, March 9. Planned U.S. Troop Withdrawal. (See p. 1549.)

1978, April 28. South Korean Airliner Attacked over Soviet Territory. Soviet fighter plane fired on and forced a Korean commercial plane to land in Soviet territory. Two passengers were killed and 13 were injured during the incident. The Soviet Union claimed that the airliner was attacked only after the Korean pilot had failed to respond to warning signals. Korea claimed that the Soviets had failed to warn the pilot.

1979, December 12–13. Martial Law Chief Arrested. General **Chung Seung Hwa** was arrested by subordinates for complicity in the slaying of President Park. Chung was subsequently tried and sentenced to 10 years in prison for his role in the assassination (March 13, 1980).

1980, May 18. Martial Law Imposed. Following rioting and antigovernment demonstrations by students and others throughout South Korea, total martial law was imposed by General **Lee Hi Song.**

1981, January 24. Martial Law Decree Lifted. In fulfillment of a promise made upon his accession to the presidency (September 1, 1980) **Chun Doo Hwan** announced the end of martial law in South Korea. South Korea had been under some form of martial law since the assassination of South Korean President Chung Hee Park.

1983, September 1. Soviets Down Korean Commercial Aircraft. (See p. 1493.)

1983, October 9. Korean Officials Killed in Terrorist Bombing. (See p. 1523.)

1987, November. North Korean Terrorists Destroy South Korean Airliner. En route from Abu Dhabi to Singapore the plane went down in the Andaman Sea, near Burma, after a

bomb exploded. One of two terrorists later (after extradition to South Korea) confessed that she and her colleague had followed orders from the North Korean government.

1988, May–June. Student Unrest. Students across the country clashed violently with police while demanding reunification of Korea.

Japan

1982–1983. Five-Year Military Buildup Plan. The Japanese government announced a 5-year plan of military development with the objective of developing a capability to defend 1,000 miles beyond its seacoast (July 23, 1982). The plan was the first attempt at providing for its own national security since its defeat in the World War II, and the establishment of the National Self-Defense Force (see p. 1431). The Japanese Diet voted funds for this buildup (December 30, 1982; July 12, 1983).

1987, January 23. Japan Increases Levels of Defense Expenditures. Responding to U.S. pressure, the Japanese government's defense budget, for the first time since World War II, exceeded 1 percent of the Gross National Product.

AFRICA

East Africa

Ethiopia

1975, January 31–July 31. Civil War Escalates in Eritrea. Ethiopian forces continued to battle Eritrean secessionist rebels in Asmara and north of the provincial capital. The rebels were unsuccessful in their attempt to cut the main road between the Ethiopian capital, Addis Ababa, and the deep-water port of Assab on the Red Sea. The rebels also failed to capture Asmara and Keren, northwest of Asmara. Although the rebels failed to capture any key urban center, they did control most areas near Asmara. The two principal rebel factions, the Eritrean Liberation Front-Revolutionary Command (ELF-RC) and the Eritrean Popular Liberation Front (EPLF), joined forces for these operations.

1976, May 16. Ethiopian Peace Offer. Brigadier General **Tafari Banti,** Ethiopian chief of state and nominal head of the Military Council, offered amnesty to Eritrean political prisoners, economic aid to the Eritrean province, and also held out the possibility of regional autonomy for the Eritreans if they would cease fighting.

1976, May 18–22. Ethiopian Peasant Volunteer Offensive. While the Ethiopian government was offering peace, it was raising a volunteer army of as many as 50,000 peasants to launch an offensive against the Eritrean rebels. The drive bogged down almost immediately when the Eritreans blew up a key bridge. The peasant militia was soon disbanded (June 13).

1976, December, Ethiopian Sign Soviet Assistance Pact. Ethiopian leaders signed a long-term military aid treaty with the Soviet Union.

1977, January 5–August 25. Eritrean Successes. The EPLF won an important psychological victory by taking the town of Karora (January 5). Soon after they captured Naqfa, a district capital (March 23). Keren, the second largest city in Eritrea and the key to control of the north and west of the province, was captured (July 3). Taking advantage of Ethiopian involvement in Ogaden, the Eritreans attacked the deep-water port of Massawa on the Red Sea, 45 miles east of Asmara (July 15). Massawa was encircled and almost the entire northern part of the province was in rebel hands (August 25).

1977, January–June. Rebellion in Ogaden Province. A majority of the sparse population of Ethiopia's desert Ogaden Province were Somalis. Undoubtedly encouraged by the Soviet-supported Somalia government, the Western Somalia Liberation Front (WSLF) took up arms to throw off Ethiopian rule and to

join Somalia. Ethiopian forces in the province were forced to retreat to fortified mountain bases at Jijiga, Harar, and Diredawa.

1977, February 3. Mengistu Seizes Power. Colonel **Mengistu Haile Mariam** and his followers bested Brigadier General Tafari Banti in a bloody gun battle in Addis Ababa in which Banti was killed. Mengistu ruled virtually unopposed.

OGADEN WAR WITH SOMALIA

1977, July 13. Somalian Invasion of Ogaden. Encouraged by Soviet economic and military assistance, and by Ethiopia's involvement in Eritrea, Somali President **Siad Barre** sent troops into Ogaden Province from northwest Somalia to help the WSLF, with the ultimate objective of annexing Ogaden to Somalia. Barre insisted, however, that the invasion troops were volunteers, and denied any regular Somali troop involvement. Barre's action was embarrassing to the U.S.S.R., which had also begun to provide military assistance to Ethiopia.

1977, August 16–19. Battle of Diredawa. Ethiopia troops repulsed attacks by Somali and WSLF troops to take their fortified positions at Diredawa. The extent to which this Ethiopian success was due to the presence of Soviet advisers and a small contingent of Cuban combat troops is unclear. The Somalis, however, were able to block the railroad from Addis Ababa to Djibouti on the Red Sea.

1977, September 4–14. Battle of Jijiga. Somalis and WSLF defeated Ethiopian forces, destroying or capturing 50 tanks. Casualties were heavy on both sides. The Somalis seized the Kara Marda Pass (September 23–27) and advanced from north and east to blockade Harar. Ethiopian troop buildup, assisted by Soviet advisers and Cuban combat troops, halted further Somali advance, and a stalemate ensued. The Soviets attempted to arrange a settlement between their warring clients.

1977, November 13. Soviets Expelled from Somalia. Infuriated by the fact that his presumed Soviet allies were also assisting his Ethiopian enemies, Siad Barre expelled his Soviet military and technical advisers, and required them to evacuate their naval and submarine bases at Mogadishu and elsewhere on the Indian Ocean coast. Soviet Colonel General **Grigory Borisov,** who commanded the Soviet mission in Somalia, went to Ethiopia.

1977, November–1978; January. Soviet and Cuban Buildup in Ethiopia. Soviet adviser strength increased from a handful to about 1,500; Cuban troop strength increased from about 500 to about 11,000. The Soviet mission was commanded by Army General **Vasily Petrov,** who had been First Deputy Commander of Soviet ground forces. He was assisted by General Borisov after he arrived from Somalia. A combined Ethiopian-Cuban offensive into the Ogaden was planned.

1978, February 6. Relief of Harar. Ethiopian and Cuban troops, assisted by air support provided by Soviet and Cuban pilots, drove the Somalis from their positions around Harar. They were repulsed, however, by Somali and WSLF troops dug in near Babile and the Kara Marda Pass (February 14).

1978, March 2–5. Battle of Diredawa-Jijiga. An Ethiopian-Cuban offensive was spearheaded by a Cuban paratroop battalion airlifted to the vicinity of Diredawa, and routed the Somali forces blocking the railroad. The Ethiopian 10th Division, advancing along the railroad, enveloped the principal Somali positions around Jijiga from the north and east. The Cuban paratroops moved against the rear of the Somali positions, while 3 Cuban infantry regiments and an armored regiment drove southward and eastward through the Kara Marda Pass. The Somalis, virtually surrounded, collapsed after suffering heavy casualties.

1978, March 8. Somali Withdrawal from Ogaden. President Barre asked for a cease-fire, and withdrew his forces. WSLF resistance continued, but was easily controlled by the victorious Ethiopians, who were now able to turn

their major attention to the rebellion in Eritrea (see p. 1532).

1978, April 6–30. Ethiopian Buildup in Eritrea. Mengistu was determined to seek a military solution with or without Soviet-Cuban aid in Eritrea, despite Soviet advice to seek a diplomatic settlement. He began massing 100,000 troops along the Eritrean border.

1978, July–November. Ethiopian Offensive in Eritrea. Ethiopian troops advanced into Eritrea between Tigre and Bagemdir (July 26). They drove the Eritreans away from Massawa and advanced toward Keren. They took Keren after a number of bloody battles (November 27). The Eritreans retreated to the northwest corner of the province.

1979–1988. Civil War in the North. Despite modern Soviet weaponry and Soviet, Cuban, and East German advisers, government troops were stalemated in their decades-long (since c. 1962) struggle with guerrilla forces in Tigrė province and Eritrea. The well-organized and experienced guerrilla forces were fairly well-equipped. The government's doctrinaire program of Marxist reforms, coupled with blatant oppression of non-Amhara ethnic groups, antagonized many Ethiopians and indirectly aided the rebels.

1988–1989. Reverses in Eritrea and Tigrė. A series of major government offensives in Eritrea and Tigrė were soundly defeated. Many government troops surrendered, and large quantities of arms and supplies fell into rebel hands. For the first time, the Tigrean Peoples' Liberation Front (TPLF) posed a serious threat to government forces. The initiative passed to the rebels.

1989, May. Military Coup Attempt. Dissident army officers attempted a coup against the government in mid-month while President Mengistu was out of the country. After several days of hard fighting around Addis Ababa and Asmara, they were defeated. Twelve senior officers were later executed (May 1990).

1989, Autumn–1991, Spring. Rebel Victories. War-weary loyalist troops were forced back on all fronts in their war against concentrated efforts by Tigrean and Eritrean insurgents. Asmara, capital of Eritrea, came under rebel siege, and fighting came within 100 km of Addis Ababa (late 1990).

1991, May. Government Collapse. Mengistu fled the country (May 21), and a few days later the rebels occupied Addis Ababa and set up a new government (May 28).

Seychelles

1976, June 28. Seychelles Granted Independence from Great Britain.

1977, June 5. Coup d'Êtat. The new Socialist government of **France Albert Renė** established friendly ties with the Soviet Union, granting access to Seychelles naval facilities.

1978, April 29. Coup Attempt Fails. Officials loyal to President France Albert Renė uncovered a plot to overthrow Renė and replace him with former President **James Mancham.**

1981, November 25. Coup Attempt Fails. A band of 50 mercenaries, veterans of the Katanga insurrection in the Congo (Zaire, 1961–1967; see pp. 1440–1443) led by soldier of fortune "Mad Mike" Hoare, failed to oust President Renė's regime by force of arms. Hoare and his band arrived in the Seychelles disguised as rugby players, but fighting broke out when a customs guard noticed that one member had an automatic weapon. A 20-hour gun battle ended with the capture of 5 of the mercenaries, one killed in the course of the action, while Hoare and 43 others made their escape on a comandeered Air India airliner and landed in South Africa. Subsequently, the mercenaries were tried in South African court but received light sentences, fueling the speculation that the South African government had authorized the operation.

1982, August 18–19, Army Revolt. An uprising by dissident army troops was suppressed with the assistance of Tanzanian forces.

Somalia

1975, July 6. Soviet Base in Somalia Confirmed. A U.S. congressional delegation con-

cluded, despite Soviet denials, that the Soviet Union had established a base for naval refueling and storage of weapons at Berbera.

1976, April 5. Soviet Advisers in Somalia. Foreign observers reported the presence of more than 2,000 Soviet military advisers in Somalia, as well as 600 Cubans.

1977, January–June. Involvement in Ogaden. President Siad Barre encouraged ethnic Somali insurgents in Ethiopia's Ogaden Province (see p. 1532).

1977–1978. Ogaden War with Ethiopia. (See p. 1533.)

1978, April 9. Army Revolt Suppressed. Troops loyal to Somali President Siad Barre easily suppressed a revolt of dissident army officers, who blamed the political leadership for the defeat in the Ogaden Desert War.

1980, August 21. U.S.–Somalia Military Cooperation Agreement. Somalia signed an agreement which permitted the U.S. to use Somali naval and air force facilities at Mogadishu on the Indian Ocean and Berbera on the Gulf of Aden. The agreement provided the Somalis with $25 million in military assistance for 1 year (1981) and additional aid in following years.

1988, Summer. Disorders in North. Tribally based unrest in northern Somalia (largely among Issaq Somalis) provoked fierce government repression. Minor guerrilla activity began in the countryside.

1988–1990. Spreading Insurrection. Despite vigorous government counterinsurgency actions, guerrilla forces of the Somali National Movement (SNM) slowly gained ground in northern and central Somalia.

1990, December 27–January 29, 1991. Somalian Revolution. Siad Barre's increasing oppression and guerrilla successes in the countryside sparked popular insurrection in Mogadishu (December 27–28). Fighting spread throughout the country, and the death toll soon reached at least 1,500 (January 14). Despite initially superior government resources, the rebels gradually gained the upper hand. Siad Barre fled the capital (January 27), and fighting ceased in Mogadishu. A provisional government was installed (early February 1991).

Djibouti (French Somaliland)

1975–1977. Unrest in French Somaliland (Territory of Afars and Issas. Internal unrest was compounded by border incidents between French troops and Ethiopian and Somali forces, resulting from hostilities between those countries and insurgency in Ethiopia of separatist Afars and Issas tribesmen.

1977, June 27. Independence of Djibouti. The new nation—renamed Djibouti—began with tension and strained relations with neighboring Ethiopia and Somalia.

Sudan

1975, September 5. Coup Attempt Fails. Troops loyal to President Gaafar al-Nimeiry crushed rebel army officers who had seized a radio station and announced the overthrow of the government.

1976, July 2–3. Coup Attempt Fails. Rebel soldiers attempting to overthrow the Nimeiry government were overwhelmed by loyal troops.

1976, July 13–19. Egyptian, Sudanese, and Saudi Defense Pacts. (See p. 1502.)

1977–1978. Border Skirmishes with Ethiopia. Occasional small-scale fighting occurred due to Sudan's support of the Eritrean separatists.

1977, February 2–6. Separatists Defeated. Elements of the air force, attempting to set up a separate government in the southern portion of the country, were crushed by government troops.

1977, February 27–28. Sudan Enters Joint Command with Egypt and Syria. (See p. 1502.)

1977–1984. Continued Insurgency in the South. Despite earlier agreements (see p. 1438) the dissident Christians and pagans of the south continued their resistance.

1983, May 15–16. Army Mutiny Crushed. Local government troops suppressed a mutiny of disgruntled Sudanese Army enlisted personnel and noncommissioned officers.

1983, September. Rebellion in the South. Under pressure from the Islamic Brotherhood, President Nimeiry decreed legal changes to bring Sudanese law into accord with the *Shari'ah,* and divided the southern region into 3 parts. Colonel **John Garang** became leader of the Sudanese People's Liberation Army (SPLA), combining antigovernment guerrilla forces.

1983–1985. Guerrilla Warfare. Government control in the south was limited to a few larger garrison towns, while most of the countryside was in rebel hands.

1985, April 6. Coup d'Ėtat. While President Nimeiry was in Cairo, returning from a visit to the U.S., he was deposed by senior army officers. Defense Minister General **Abdel Rahman Siwar el-Dahab** headed the new government. Guerrilla conflict in the south died away.

1986–1991. Guerrilla Warfare Resumes. In reaction to the Moslem character of the new government, the SPLA resumed guerrilla warfare in the south. Periodic and sporadic famines (1987–1988) both limited military operations and increased civilian suffering. In the northern portions of the southern region, government-sponsored Moslem militias engaged in irregular warfare against neighboring Christian and pagan tribes, reportedly committing atrocities and massacres, and running slaving expeditions.

1989, June 30. Military Coup. The government of Saddiq al-Mahdi was overthrown by army officers, who had been pressing him to affirm a compromise peace arrangement with the SPLA.

1990, March–September. Three Failed Coup Attempts. Government security forces foiled 2 separate coup attempts by dissident army officers (March, April) and noncommissioned officers (September).

1990, August. Southern Rebels Capture Border Garrison Towns. Forces of Garang's SPLA captured the garrison towns of Rathwulou (on the Zairan border) and Kit Madho (on the Ethiopian border).

Uganda

1976, July 4. Israeli-Entebbe Operation. **(See p. 1500.)**

1977–1978. Tension with Tanzania. **(See p. 1537.)**

1978, October 30–November 27. Ugandan Invasion of Tanzania. Ugandan troops penetrated 20 miles into northwestern Tanzania. Tanzania launched counterattacks (November 11). The Ugandans withdrew (November 27).

1979, January–June. Tanzanian Invasion. Tanzanian troops entered Uganda in support of Ugandan exiles attempting to overthrow President Idi Amin Dada. Libyan ruler Colonel Muammar Qaddafi flew troops to aid Amin, but the Libyans and Ugandans were routed by the Tanzanians. A provisional government was formed (April 11–13). Tanzanian forces occupied Kampala and systematically wiped out remaining pockets of resistance (April 18–June 3). Tanzanian troops remained in Uganda for the next 2 years.

1980, May 11. Military Coup d'Ėtat. Brigadier General **David Oyite Ojok** deposed the civilian President **Godfrey Binaisa** and established a ruling military junta. Tanzanian troops in Uganda did not intervene. The junta reinstated political parties, then relinquished control of the government (September 17).

1980, October 7–15. Amin Supporters Invade Uganda. Ugandan rebels, loyal to former President Idi Amin, invaded Uganda from Zaire and Sudan. They captured Arua and Koboko, but fled Uganda when Tanzanian troops arrived.

1981. Civil Unrest and Guerrilla Warfare. Following national elections (December 10–11, 1980) civil unrest and guerrilla warfare began in opposition to the government of President **Milton Obote.**

1981, June 30. Tanzanian Troops Withdraw. Tanzanian troops concluded a 2-year peacekeeping mission. President Milton Obote protested the departure of the Tanzanian troops because of guerrilla activity in Uganda.

1985, July 27–29. Milton Obote Deposed. President Obote was deposed by mutinous army forces under the command of Brigadier **Basilio Olara Okello,** and fled to Kenya. Brigadier Okello suspended the constitution, and Lieutenant General Tito Okello (no relation) was named the new ruler (July 29).

1985, December 17. Government Accord with NRA. New Ugandan ruler General Tito Okello concluded an accord with the rebel National Resistance Army (NRA) of **Yoweri Museveni.**

1986, January 15–29. NRA Overthrows Okello. Museveni, frustrated by Okello's failure to control the army, launched an offensive from his base area in southwestern Uganda. NRA troops captured Kampala (January 26) and Jinja (January 27) after heavy fighting. Okello fled to Sudan (January 28). Museveni was sworn in as President on January 29.

1986–1991. Continuing Low-level Insurgency. Low-level guerrilla warfare continued in the north and west of the country. There were many reports of both NRA and guerrilla massacres and atrocities.

1989, January 3–6. Idi Amin Attempts to Return. Former Ugandan dictator Idi Amin traveled to Zaire, equipped with false papers, apparently intending to enter Uganda clandestinely. Zaire refused Uganda's requests for Amin's extradition, and eventually sent him back to exile in Saudi Arabia.

Tanzania

1977–1978. Tension with Uganda. Uganda's President Idi Amin made repeated charges of Tanzanian plans to invade Uganda. President **Julius Nyerere** of Tanzania denied the charges.

1978, October 30–November 27. Ugandan Invasion of Tanzania. (See 1536.)

1979, January–June. Tanzanian Invasion of Uganda. (See 1536.)

1979–1981. Tanzanian Peacekeeping Force in Uganda. (See 1536.)

1982, August 18–19. Tanzanian Intervention in Seychelles. (See p. 1534.)

Central Africa

Burundi

1976, November 1. Coup d'État. The government of President **Michel Micombero** was overthrown in a bloodless military coup led by Lieutenant Colonel **Jean-Baptiste Bagaza.**

1988, August–September. Ethnic Clashes. Following minor violence between the majority Hutu tribe and the dominant but minority Tutsi, the Tutsi-manned army went on a rampage, killing or injuring thousands of virtually unarmed Hutu. Some 50,000 Hutu fled to neighboring countries. Amidst international protests, government reformes encouraged most refugees to return (late 1989).

Rwanda

1990, September 30–October 5. Rwandese Patriotic Front Invasion. A force of 5,000–10,000 exiled Tutsi, based in Uganda and led by Major General **Fred Rwigyenna,** invaded Rwanda, intending to depose the Hutu government and restore Tutsi power (September 30). This mirrored the ethnic conflict in neighboring Burundi in 1988. President **Juvénal Habyarimana** appealed to Belgium for military aid (October 3). The invasion was repulsed with the help of 500 Belgian, 300 French, and 500 Zairan troops. Habyarimana declared a state of emergency (October 8), and later announced a cease-fire and agreed to the return of the exiles (October 18).

Central African Empire (Central African Republic)

1976, December 4. Empire Proclaimed. President Jean-Bedel Bokassa officially renamed the Central African Republic the Central African Empire and proclaimed himself Emperor Bokassa I.

1979, January 20–21. Student Riots Suppressed. A governmental order that university students wear state uniforms resulted in rioting

and looting in the capital city of Bangui. Troops from neighboring Zaire helped put down the riots.

1979, September 20. Coup d'État. Emperor Bokassa I was overthrown by former President David Dacko with French help in a bloodless coup d'État. The country was renamed Central African Republic.

1981, September 21. Coup d'État. President Dacko was overthrown in a bloodless coup by the Army Chief of Staff, General **André Lolingoa,** who named himself president.

Chad

1975, April 13–15. Coup d'État. General **Noel Odingar** led a successful coup against the government of Chad's first president, **N'garta Tombalbaye,** who was killed. General **Felix Malloum,** commander of the armed forces, was named head of the Military Council (April 15).

1975, September 27. Malloum Orders French Troops Out of Chad. President Malloum ordered France to withdraw its troops from Chad because France had been negotiating for the release of French nationals held hostage by a Moslem rebel movement, Frolinat, led by **Hissen Habre.**

1975, October 13–October 27. French Withdrawal. This ended 78 years of French military presence in Chad.

1976, April 13. Attempted Coup. Frolinat guerrillas failed in an attempt to assassinate Malloum.

1976–1977. Libyan Intervention. Libyan leader Muammar Qaddafi provided aid for Frolinat rebels in northern Chad and claimed 37,000 square miles of northern Chad (September 9, 1976).

1977, July 18. French Military Assistance. At the request of Chad's government, French transport planes airlifted Chad troops to the battle front in northern Chad. France also sent a few military advisers.

1978, February 1–February 24. Rebel Success. A Frolinat offensive overran nearly 80 percent of the country (February 7). President Malloum agreed to a cease-fire (February 20), then met with the leaders of Libya, Niger, and Sudan to negotiate a peaceful solution (February 24). But the Frolinat broke the cease-fire by launching a major offensive (April 15).

1978, April 26–June 6. French Intervention. At the request of President Malloum, about 500 troops of the French Foreign Legion intervened on behalf of the government and combined with 1,500 government troops to stop the rebel offensive (June 6). Additional French Foreign Legionnaires soon raised the total of French troops to around 2,500.

1978, August 29. Habre Named Premier. Malloum named guerrilla chieftain Hissen Habre as premier after his faction split with Frolinat.

1979, February 12–17. Attempted Coup. Prime Minister Habre attempted to overthrow President Malloum. French troops helped the government quell the insurrection. Habre fled to the north where he kept his rebellion alive.

1979, March 16–23. National Coalition Government Formed. An agreement was reached between the government, Habre's Frolinat faction, and the rival Frolinat faction headed by **Goukouni Oueddi** to halt civil war and form a coalition provisional government (March 16). It was also agreed that all French troops would be withdrawn. A new government was established with Oueddi at its head (March 23).

1979, April 20. Libyan Invasion Repulsed. Under the pretext of aiding the rebels in northern Chad, Libyan troops invaded. They were repulsed with French assistance. The French began a slow troop reduction.

1980, January 18. Congolese Peacekeepers Arrive. Under the auspices of the Organization of African Unity (OAU), a Congolese peacekeeping force arrived in Chad.

1980, March 22–December 16. Renewed Revolt. Fighting erupted in Ndjamena, the capital city, after Malloum was succeeded as president by Oueddi. The revolt was finally suppressed with the assistance of Libyan troops requested by Oueddi. Habre fled to Cameroon.

1981, January 7. Quaddafi Proclaims Unity of Chad and Libya. This announcement of

complete unity was endorsed by Oueddi. Chad was initially occupied by about 6,000 Libyan troops.

1981, October 31. Agreement for Libyan Withdrawal. Oueddi's request for withdrawal was supported by the OAU. Qaddafi reluctantly complied; the Libyan troops were replaced by a smaller OAU peacekeeping force (December 17).

1982, March 21–June 8. Renewed Civil War. After the Libyan departure Habre renewed his rebellion and overthrew Oueddi (June 8).

1983, June–July. Oueddi Renews Civil War. The former President, assisted by Libyan troops, gained control of most of the northern half of the country.

1983, July 30. Government Resurgence. After the rebels seized the Faya-Largeau oasis, Habre directed a counteroffensive to recapture the oasis.

1983, August 3–10. Libyan Intervention. Following a savage air bombardment by Soviet-built Libyan planes, Oueddi's rebels recaptured Faya-Largeau.

1983, August 9–13. France Intervenes. Some 1,000 French paratroopers landed at Ndjamena, then advanced north to Salaland Arada, in the middle of the country. A nonshooting stalemate ensued.

1983, August 17. Cease-Fire. The rival Chad factions agree to a French-arranged cease-fire.

1984, September. France and Libya Negotiate Troop Withdrawal. Mutual withdrawal of troops was agreed. The French troops departed (early 1984), but Libyan troops remained in the Aouzou Strip along the Chad-Libya border.

1986, February–March. Renewed Libyan Incursions. Libyan forces in the Aouzou Strip mounted several major operations to the south, but were repulsed by Chadian forces with French assistance.

1987, March. Chadian Victory. Chadian forces, using pickup trucks equipped with sophisticated Milan and TOW antitank missiles, and employing highly effective hit-and-run tactics, attacked and destroyed the Libyan forces in the Aouzou Strip. The Libyans abandoned much equipment, including artillery, tanks, air defense weapons, trucks, and a few aircraft. After further border skirmishes, a truce was arranged (September).

1989, April. Coup Attempt Foiled. An attempt to depose President Habré was foiled by loyalist security forces. One coup leader, **Hassan Djamouss,** was killed and the other, General **Idriss Deby** (a former defense minister) fled to Sudan, from which he mounted sporadic guerrilla attacks. Although unsuccessful, the coup marked the disintegration of the northern tribal coalition which had brought Habré to power.

1990, April. Rebel Incursions. Rebel forces, led by exiled former defense minister General Idriss Deby, mounted a series of raids from bases in Sudan.

1990, November 10–December 4. Habré Overthrown. Troops of Deby's Popular Salvation Movement invaded Chad and captured Abéché (November 29). French troops did not intervene. President Hissan Habré fled to Cameroon (December 1), and Deby captured N'Djamena, suspended Parliament, and declared himself president (December 2–4). He promised multiparty democracy, but in light of his ties to Libya, the U.S. organized an airlift to Nigeria for Libyan exiles in Chad (December 6).

Zaire

1989, February–March. Student Unrest. University student unrest was triggered by discovery of a student's body near a military base. Despite rumors that several dozen student demonstrators had been killed by security forces, the government admitted to only 1 death, and closed the universities in response to protests (February 15–March 15).

West Africa

Angola

1975, January 15. Alvor Agreement. The 3 major opposing factions in Angola met at Alvor, Portugal: Dr. **Agostinho Neto**'s Popular Movement for the Liberation of Angola

(MPLA); **Holden Alvaro Roberto**'s National Front for the Liberation of Angola (FNLA); and **Jonas Savimbi**'s National Union for the Total Independence of Angola (UNITA). They agreed upon a coalition government. Despite this, fighting continued through the spring and summer, punctuated by cease-fires and truces.

1975, March–April. Soviet Support to MPLA. Massive shipments of arms arrived for Neto's faction. Several hundred Cuban military "advisers" also arrived to support Neto.

1975, August 9. Coalition Government Collapses. UNITA and FNLA withdrew from the government, leaving Neto and MPLA in control. Intensified civil war resumed.

1975, August 14. South African Intervention. P. W. Botha, defense minister of the Republic of South Africa, seeking to assure the defeat of Neto's MPLA faction, sent an armored task force into southern Angola. The South Africans twice defeated Cuban troops.

1975, December 12. Battle of Bridge 14. Despite a 3-to-1 advantage in troop strength, Cuban troops were again decisively defeated by the South Africans. By this time there were approximately 7,500 Cuban combat troops in Angola.

1976, February 8. FNLA Crushed. Neto's troops and their Cuban allies defeated FNLA forces and took their major stronghold, Huambo. Roberto and many of his followers fled to neighboring Zambia.

1976, April 30. South Africans Withdraw from Angola. The South African government reached an agreement with MPLA guaranteeing protection of South African economic interests in Angola, provided South African combat troops were withdrawn from Angola. This was a major setback for Savimbi's UNITA.

1976, June–August. Cuban Offensive. Cuban troops launched a combined arms offensive against Savimbi troops hoping to crush UNITA as a rival force in Angolan politics (June 3). The Cubans drove Savimbi's troops from central Angola into the southeast corner of Angola.

1976, September–November. Renewed Cuban Offensive. In an attempt to end all resistance to MPLA rule of Angola, an estimated 15,000 Cuban combat troops launched an offensive against UNITA strongholds in southern Angola. They had only limited success and withdrew.

1976–1990. Savimbi's War of Insurgency. MPLA forces and their Cuban allies were frustrated by UNITA's guerrilla tactics. Savimbi's troops successfully attacked supply routes and raided MPLA camps. Their efforts were aided by South African intervention in southern Angola (1975–1982, 1983–1984; see p. 1543). By the early 1980s, Savimbi's forces had gained effective control of the southeastern third of Angola, and cut the Benguela-Zaire railway several times. Despite these successes, UNITA was unable to win a decisive victory, but neither could the MPLA defeat UNITA, even with Cuban aid.

1989–1990. Tentative Peace in Angola. An Angolan peace settlement, brokered by several African countries, and negotiated at Kinshasha, Zaire (July 1989), broke down amid mutual recriminations between Savimbi and Angolan President **José Eduardo dos Santos.** A new peace effort, supported by both the U.S. and the Soviet Union, met with more success (May–December 1990). Savimbi announced a tentative agreement at a peace conference in Washington (December 14).

1989, January–1991, July. Cuban Withdrawal. As part of efforts toward a peace settlement in Angola, and negotiations relating to Namibian independence (see below), Cuba began to withdraw its 50,000 troops in Angola. Complete withdrawal was due to be completed in July 1991.

People's Republic of Benin (Dahomey)

1975, January 21. Attempted Coup. A brief rebellion led by the minister of labor was put down by government troops.

1975, October 18. Coup Plot Thwarted. Security forces discovered and suppressed a plot to overthrow President Mathieu Kerekou.

1977, January 16. Attempted Coup.

Burkina Faso (Upper Volta)

1980, November 25. Coup d'État. President Sangoule Lamizana was overthrown in a military coup and replaced by Colonel **Saye Zerbo.**

1982, November 17. Coup d'État. Zerbo was overthrown by dissident soldiers led by Major General **Jean-Baptiste Ouedraogo.**

1983, August 5. Coup d'État. Ouedraogo was ousted by former Premier **Thomas Sankara.**

1985, December. Border Clashes with Mali. These sprang from a quarrel over the mineral-rich Agacher Strip, which was also the source of minor conflict in 1974–75. After 5 days of skirmishing, the quarrel was referred to the International Court of Justice at The Hague, and a settlement was eventually reached, dividing the disputed area (1988).

1987, October 15. Coup Topples Sankara. He and 8 others were killed in a coup led by fellow National Revolutionary Council (CNR) member Captain **Blaise Campaoré,** who headed a triumvirate, including fellow CNR members Major **Jean-Baptiste Lingari** and Captain **Henri Zongo,** called the Popular Front (FP).

1989, September–December. Coup Attempts. President Campaoré's fellow FP members Lingari and Zongo were executed by firing squad, allegedly for planning a coup (September 14). The government later announced it had detected and foiled another plot (December 26).

Cameroon

1976, November 16. Border Clash with Gabon. (See below.)

1984, April. Unsuccessful Military Coup. Dissident army officers mounted a coup attempt against President **Paul Biya,** but loyal army forces defeated the rebels.

People's Republic of the Congo (Congo, Brazzaville)

1978, August 14. Attempted Coup. Plans to overthrow the military government of President **Joachim Yombi Opango** were thwarted.

1990, May 22. Political Unrest. After the discovery of the body of opposition leader Joseph Rendjambe, antigovernment protesters rioted in Libreville and Port Gentil. French troops in Gabon (1 Marine infantry regiment) evacuated French citizens, and order returned in early June.

Ivory Coast (Cote D'Ivoire)

1990, May 14–16. Military Unrest. Some 1,000 army conscripts mutinied in Abidjan, demanding higher pay (May 14). Two days later, air force personnel seized the airport, joined by hundreds of soldiers. Most returned to their barracks following government concessions (May 16–17).

Gabon Republic

1976, November 17. Border Clash with Cameroon. Gabon's common border with Cameroon was closed following a Cameroon rocket attack launched on a police post.

1978, June 6–1979, August 14. Peacekeeping Force Sent to Zaire.

Gambia

1981, July 30. Attempted Coup. A coup attempted by paramilitary police and armed civilians enjoyed initial success until Senegalese troops intervened to put down the revolt.

Ghana

1975, December 23. Attempted Coup.

1978, July 5. Coup d'État. Ghana's head of state, General Ignatius Kutu Acheampong, was deposed by his deputy, Lieutenant General **Fred Akuffo.**

1979, May 15. Attempted Coup. A coup attempt by Flight Lieutenant **Jerry Rawlings** was unsuccessful, resulting in Rawling's imprisonment.

1979, June 4. Coup d'État. After being freed from prison by rebels, Rawlings led a successful coup against General Akuffo's government. A civilian government was installed.

1981, December 31. Coup d'État. Rawlings seized complete control from the civilian government, claiming corruption and incompetence.

Guinea

1979, April 17. Troops Sent to Liberia. (See below.)

1980, January 18. Peacekeeping Forces Sent to Chad.

Guinea-Bissau

1975, March 30. Attempted Coup.

1980, November 14. Coup d'État. President **Luis de Almeida Cabral** was ousted by Premier **Joao Bernardo Vieira.**

Liberia

1979, April 14–15. Price Increase Riots. Following the government's proposed increase in the price of rice, demonstrations and riots flared in the capital of Monrovia. Order was restored with the help of 200 troops from neighboring Guinea.

1980, April 12. Coup d'État. Sergeant **Samuel K. Doe,** leading enlisted men of the Liberian Army, overthrew President **William R. Tolbert,** promising an end to corruption in government. Tolbert and 27 others were killed while soldiers went on a looting spree in Monrovia for several days.

1989, December. Coup Attempt Suppressed. Forces loyal to President Doe defeated a coup attempt; afterwards hundreds of refugees fled to the Ivory Coast.

1990, January. Civil War Begins. The National Patriotic Front (NPF) guerrilla army, based in Guinea and led by **Charles Taylor,** invaded Liberia to depose Doe. Taylor was a former finance minister in Doe's government, and his effort posed a real threat to Doe's shaky control. As NPF troops advanced, the war acquired inter-tribal overtones as conflict grew between Doe's Krahn tribe and the rival Gio and Mano tribes.

1990, June 4. U.S. Navy Task Force Arrives. A U.S. Navy force, carrying 2,000 Marines, arrived off Monrovia to conduct an evacuation of U.S. citizens from Monrovia, should such be needed.

1990, July 2. Fighting in Monrovia. Doe's forces controlled little outside of the capital, and the Presidential Palace was besieged. The political situation grew more complex when NPF leader **Prince Yormie Johnson** split with Taylor and began his own faction (July 6). Government troops massacred 600 Gio and Mano refugees at a Lutheran Mission in Monrovia (July 30), inflaming ethnic rivalries.

1990, August 5–8. Western Civilians Evacuated. Following Johnson's threat to take Western hostages (August 4), U.S. Marines mounted a 3-day evacuation effort, extricating U.S. embassy personnel and some 125 civilians. Johnson, meanwhile, captured 22 civilians (August 6), but released them unharmed the next day.

1990, August 24. International Intervention. A 3,000-man force from the Economic Community of West African States (ECOWAS) landed in Monrovia to restore order and help arrange a compromise political settlement. This ECOWAS Monitoring Group (ECOMOG) included contingents from Nigeria, Ghana, Gambia, Guinea, and Sierra Leone, commanded by Ghanian General **Arnold Quainoo.** ECOMOG gained control of much of the capital in scattered fighting (August 25–September 2).

1990, September 9–10. Capture and Death of Doe. While traveling to ECOMOG headquarters to arrange his departure, Doe was intercepted and captured by Johnson's troops (September 9), and later killed (September 10).

1990, September–November 28. Continued Fighting. Factional fighting continued in Liberia after Doe's death between ECOMOG, Johnson's and Taylor's factions of the NPF, and forces loyal to Doe's defense Minister, Brigadier

General **David Nimblay.** ECOWAS finally pressured all parties into accepting a cease-fire negotiated at Bamako, Mali (November 26–28). There was, however, no political settlement, many Liberians were starving, and the threat of renewed civil war remained (early 1991).

Mali

1985, December. Border Clash with Burkina Faso. **(See p. 1541.)**

Mauritania

1975, December 10. Mauritania Seizes Southern Sahara. While Moroccan troops were seizing the northern ⅔ of the former Spanish colony of Sahara (see p. 1548), Mauritanian troops seized Southern Sahara. They were immediately attacked by indigenous guerrilla forces seeking independence for Sahara: the Popular Front for the Liberation of Saqiat al Hamra and Rio de Oro (Polisario). A fierce 3-way struggle for the control of Sahara ensued, with Polisario guerrillas fighting both Mauritanians and Moroccans.

1978, July 10. Coup d'Ėtat. President **Moktar Ould Daddah** was overthrown in a bloodless coup led by Army Chief of Staff Colonel **Mustapha Ould Salek.** Salek began negotiating with the Polisarios for a cease-fire in Sahara. A peace treaty was signed the following year and all Mauritanian troops were withdrawn from the Sahara (August 5, 1979).

1980, January 4. Coup d'Ėtat. President **Mohammed Mahmoud Ould Luly** was overthrown by Premier **Mohammed Khouna Ould Haidalla** in a bloodless coup. Luly had been in power for only 6 months following Salek's resignation (June 4, 1979).

1981, March 16. Attempted Coup. A coup attempt by Mauritanian military exiles was put down by the military government. Morocco was blamed for the attempt because of anger over Mauritania's backing out of the Polisario war.

1989, April–August. Border Clash with Senegal. Following a brief trade war with Senegal (January), violence flared after 2 Senegalese peasants were killed by Mauritanian border police (April 9). Ensuing clashes, and widespread atrocities by both sides, left at least 300 dead and perhaps 300,000 refugees (April–August). Diplomatic relations with Senegal were broken (August). Although violence died away, the basic disputes remained a problem into 1991.

Niger

1976, March 15. Attempted Coup.

1983, October 6. Attempted Coup. Easily suppressed by troops loyal to President **Seyni Kountche.**

1989, May. Clashes with Tuareg Separatists. Nomadic Tuareg tribesmen clashed with army forces near Tchintabaraden in the north (early May). Government forces reported 6 soldiers and 31 Tuareg killed, but international news reports claimed army troops had killed hundreds of nomads in reprisals (June–August). The government invited Amnesty International to investigate (September).

Nigeria

1975, July 29. Coup d'Ėtat. General **Yakubu Gowon** was deposed in a bloodless military coup, and replaced by Brigadier **Muritala Rufai Mohammed.**

1976, February 13. Attempted Coup. A military coup was suppressed, but rebels assassinated Nigerian head of state General Muritala Rufai Mohammed. Lieutenant General **Olusegun Obsanjo** was chosen as the new chief of the Supreme Military Council.

1983, December 31. Coup d'Ėtat. President **Shehu Shagari** was overthrown in a military coup by Major General **Mohammed Buhari,** ending 4 years of civilian rule.

1985, August 27. Coup d'Ėtat. General Buhari was deposed by Major General **Ibrahim Babangida.** This was Nigeria's sixth coup in 20 years.

1989, May. Popular Unrest. Government austerity measures led to extensive riots (late May). The government responded with mass arrests, and closed 6 universities for a year.

1990, April 22. Attempted Coup. Disaffected army officers, led by Major **Gideon Orkar** attempted to depose General Babangida. Loyalist troops defeated the rebels and restored order; Orkar and 42 others were convicted and executed by firing squad (July 27). The coup attempt was provoked by the dismissal of Lieutenant General Domkat Yah Bali, a Christian, in a cabinet reshuffle (December 29, 1989), which led to fears of "Moslemization" in the armed forces.

Senegal

1981, July 30. Assistance to Gambia. Senegalese troops assisted Gambia in the suppression of a coup attempt (see p. 1541).

1989, April–August. Border Clashes with Mauritania. See above, under Mauritania.

1990, May 18–22. Border Clash with Guinea-Bissau. A territorial dispute led to 2 major clashes (May 18–19, 22) when Senegalese troops crossed the border. Several soldiers on both sides were killed before both countries agreed to withdraw their forces from the border area.

1990, June 19. Attack by MFDC Guerrillas. Guerrillas of the outlawed *Mouvement des Forces Démocratiques de Casamance* struck at security forces, wounding 9 Senegalese.

Togo

1978, June 19–1979, August 14. Peacekeeping Force in Zaire.

Southern Africa

Mozambique

1975–1991. Guerrilla War. Mozambican troops waged a counterinsurgency struggle against the National Resistance Movement (NMR, or Renamo), which received South African support through 1984–1985. Subsequently many Renamo forces turned to terrorism and brigandage to support themselves. To maintain the railway link through Mozambique to Sofala (Beira), several thousand Zimbabwean troops were deployed in Mozambique after 1980–1981. Mozambique provided support for the military wing of the African National Congress (ANC, outlawed in South Africa). By late 1990, the war had caused an estimated 600,000 war-related deaths, with at least again as many dead from war-caused starvation, and more hundreds of thousands driven from their homes by the fighting.

1975, December 17–19. Coup Attempt. An attempted coup by dissatisfied army officers and policemen was thwarted after 2 days of bloody fighting.

1984, March 16. N'komati Accords with South Africa. Hard-pressed by Renamo, President **Samora Machel** and President Botha of South Africa agreed that in return for Mozambique abandoning support of the ANC in South Africa, South Africa would end support for Renamo. The extent to which South Africa fulfilled the bargain was unclear.

1986, October 19. President Machel Killed in Air Crash. The president and 25 others were killed when their plane crashed in South Africa; an ANC spokesman charged that South Africa had sabotaged the plane. Machel was succeeded by **Joaquim Chissanó.**

1989, May–September. Government Initiatives. Following on guerrilla success in late 1988 and early 1989, the government of President Chissanó embarked on a new policy. While moving steadily away from one-party Marxism and toward a multiparty free-enterprise system, Chissanó also opened a major antiguerrilla offensive in Sofala province.

1990, July–December. Peace Initiatives. Chissanó's policies elicited some response from Renamo's leadership. Government and guerrilla representatives met in Rome (July), and after 3 weeks negotiations concluded a partial cease-fire (December), raising hopes for a settlement in 1991.

Lesotho

1982, December 9. South Africa Raids ANC Base. **(See p. 1546.)**

Zimbabwe-Rhodesia

1975–1976. Guerrilla Warfare Intensifies. There were two main forces operating in Rhodesia against Prime Minister Ian Smith's minority white government: **Joshua Nkomo**'s Zimbabwe African People's Union (ZAPU) and **Robert Mugabe**'s Zimbabwe African National Union (ZANU). Nkomo negotiated with Smith throughout 1975, but when no progress was made he renewed guerrilla activities, operating out of neighboring Zambia. Continued pressure was also maintained by Mugabe's insurgents operating out of Mozambique. Both Mugabe's and Nkomo's groups received substantial aid from the Soviet Union. Economic sanctions and diplomatic pressures from Western democracies forced Ian Smith to accept in principle the concept of majority rule for Rhodesia, and to schedule elections. Bishop **Abel Muzorewa,** leader of moderate opposition to Smith's minority white government, returned to bolster support before elections (October 1976).

1979, April 17–24. Muzorewa Wins Election. In an election boycotted by both Mugabe and Nkomo, Bishop Muzorewa emerged the clear winner. But ZAPU and ZANU continued guerrilla warfare.

1979, September 10–24. London Conference—British Rule Established. In an effort to defuse the situation in Rhodesia, the government of Prime Minister Margaret Thatcher intervened. Agreement of all parties was reached to return Rhodesia to colony status, and elections were scheduled on terms accepted by Mugabe and Nkomo.

1980, February 27–29. Mugabe Wins Election. Robert Mugabe's ZANU party won a huge majority of votes and seats in the new parliament.

1986. Unrest in Matabeleland. Nkomo's ZAPU party, based largely among the Matabele of southwestern Zimbabwe, was frustrated by ZANU's lock on national politics. Scattered armed clashes between security forces and armed ZAPU supporters occurred throughout the year, threatening on several occasions to erupt in outright civil war. Although fighting had died away by late 1986, the crisis was not finally resolved until ZANU and ZAPU concluded a merger agreement (December 1987).

Republic of South Africa

1975–1982. South African Operations in Angola and Namibia. South African troops carried out several large-scale interventions in the Angolan civil war on behalf of Jonas Savimbi's UNITA forces (see p. 1540), as well as continuing counterinsurgency operations against SWAPO bases in northern Namibia and Angola (see p. 1546).

1976, June 16. Soweto Incident. In Soweto, Southwestern townships outside Johannesburg, security forces opened fire on a crowd of demonstrators protesting government apartheid policies, killing dozens. This incident sparked 3 weeks of riots and protests before order was restored.

1976, June–1991. Violence in the Townships. The black-populated suburban township of South Africa's major cities suffered considerable unrest following the Soweto riots. Scattered antigovernment protests, some violent, continued until the late 1980s. By 1989–1990, liberalization of apartheid statutes reduced black protests against white rule. However, disputes between the Xhosa-based, Marxist-oriented ANC (and sometimes their more moderate United Democratic Front (UDF) allies) and the western-oriented, Zulu-based Inkatha organization (headed by Zulu chief **Mangosuthu Gatsha Buthelezi**), exacerbated by ethnic rivalries, produced increasing violence among black South Africans. Some of these clashes produced local civil wars, especially in Natal, where Xhosa and Zulu live close together. Black-on-black violence had claimed

at least 4,000 lives by December 1990, and continued into 1991.

1976–1981. "Independence" of Homelands. Four South African tribal homelands, Transkei (October 26, 1976), Bophuthatswana (December 6, 1977), Venda (September 13, 1979), and Ciskei (December 4, 1981), were granted theoretical independence from South Africa. In practice, they were dependent on South African financial, technical, and defense support. Furthermore, most black leaders, especially in the ANC, regarded them as an effort to "divide and conquer" black opposition. No country besides South Africa has recognized them as sovereign states.

1981–1982. Counterinsurgency Raids into Mozambique. South African commandos staged a number of successful raids on South African National Congress bases in Mozambique.

1982, December 9. Counterinsurgency Raids into Lesotho. South African commandos raided suspected ANC bases in Lesotho. The headquarters was discovered in a residential area, and a number of civilians were killed as well as ANC guerrillas.

1983, May 20–23. Terrorist Attack and Retaliatory Air Strike. A bomb explosion outside the South African Air Force headquarters killed 18 civilians and wounded 200 others (May 20). South Africa retaliated by an air attack on a suspected ANC base in Matola, a suburb of Maputo, Mozambique. Mozambique charged that the attack had hit only civilian businesses and homes. South Africa disputed this claim, asserting that they had hit an ANC guerrilla base.

1983, December 6–1984, January 8. Counterinsurgency Operations in Angola. South Africa troops attacked SWAPO positions in southern Angola, smashing the staging area for a planned guerrilla operation in Namibia. They continued their offensive. At Cuvelai the South Africans defeated a combined Cuban, Angolan, and SWAPO force, killing 324, while suffering only 21 casualties (January 3–5).

1984, January 17–March 16. Pact with Mozambique. Representatives from South Africa and Mozambique met at Komatiport on the Komati River and after extensive negotiations agreed that they cease supporting insurgents in the others' country.

1984, January 31. South Africa Begins Withdrawal from Angola.

1984, February 23. SWAPO Truce Set. The government of South Africa and SWAPO leader **Sam Nujoma** agreed to a truce in Namibia.

1985, July 20–1986, March 7. State of Emergency. In response to growing inability of security forces to control black townships, President Botha declared a nationwide state of emergency, granting the security forces extraordinary powers. The U.S. responded with economic sanctions (July 31, 1985). Nearly 7,000 detainees were released when the state of emergency ended.

1986, May 19. South Africa Attacks ANC Guerrilla Bases. South African air force planes and army special forces units attacked ANC guerrilla bases and strongholds in three neighboring nations—Zimbabwe, Botswana, and Zambia.

1986, June 12. Nationwide State of Emergency. This gave virtually unlimited powers to the security forces to suppress demonstrations and unrest.

1988, February 10. Coup in Bophuthatswana. A group of dissident military personnel ousted President Lucas Mangope, but were defeated when South African forces intervened.

1990, February 2. ANC Unbanned. Along with the South African Communist party (SACP) and 33 other anti-apartheid organizations, the ANC was allowed to resume legal activities. This move by President **F. W. de Klerk** was followed by the release of imprisoned ANC leader **Nelson Mandela** (February 11). These events sparked unrest in 3 of 4 "homelands" as they unbanned antiapartheid groups and moved toward reintegration with South Africa.

1990, April. Air Force Headquarters Raided. South African Air Force headquarters in Pretoria was raided by ultra-rightists, led by **Piet**

Rudolf. The robbers made off with automatic weapons, but Rudolf was arrested later (September).

1990, May 4. Groote Schuur Minute. After extensive deliberation, and prodded by Mandela, the ANC and SACP announced they would make efforts to limit violence and work toward lifting the current state of emergency. This was followed by the Pretoria Minute (August 8), in which the ANC and SACP renounced armed struggle.

1990, July–September. Inkatha "Offensive" in Transvaal. Armed members of Inkatha moved to strengthen their hold over black townships surrounding Pretoria and Johannesburg, leading to some 800 deaths. The ANC protested, and crowds as large as 80,000 gathered around migrant laborer hostels, which were Inkatha bases.

1990, September 15. Government Response. In an effort to halt black-on-black violence, the government began Operation Iron Fist, declaring 15 townships emergency zones. Curfews were imposed (but lifted within weeks), and police vehicles were allowed to mount machine-guns.

Namibia (Southwest Africa)

Britain's League of Nations Mandate over the former German colony of Southwest Africa after World War I was administered by the Union of South Africa, which later became the Republic of South Africa. South Africa continued to administer the region when the former mandates became U.N. trusteeships after World War II. Popular dissatisfaction with South African rule, and doubts whether South Africa would ever grant independence to the region, led to the establishment of the Southwest African People's Organization (SWAPO) by independence-minded local leaders (June 1960). SWAPO began to conduct local guerrilla activities against the South African administration, receiving considerable assistance and training from the U.S.S.R. Despite stern repressive measures, insurgency grew and guerrilla warfare continued during the 1960s and early 1970s.

1975, September 1–12. Turnhalle Conference. As a step toward autonomy, and presumably ultimate independence, the South African government convened a constitutional conference at Turnhalle. Participants were tribal leaders and other local leaders (including representatives of ethnic black groups and of the tiny white community). Multi-ethnic political parties (obviously including SWAPO) were excluded, thus effectively barring most educated and westernized blacks. The results were totally unsatisfactory to SWAPO; guerrilla war continued.

1978, December 4–8. Elections Held. In preparation for independence, South African-supervised elections were held. There were large turnouts, as tribal members did their chiefs' bidding and voted. SWAPO boycotted the elections. The SWAPO boycott assured the electoral triumph of the South African-backed Democratic Turnhalle Alliance.

1978–1989. Insurgency. South Africa continued to operate effectively against the insurgents and administer Namibia in preparation for complete independence. SWAPO guerrillas carried out hit-and-run raids into northern Namibia from bases in southern Angola. This led to repeated South African operations in Angola (see p. 1545).

1989, November 15–December 22. Agreement on Namibian Independence. After extensive negotiations, U.S., South African, Cuban, and Angolan representatives meeting in Geneva agreed on a timetable for Namibian independence and for Cuban withdrawal from Angola (November 15). Final signing of the agreement took place at U.N. headquarters in New York (December 22).

1990, March 21. Namibian Independence. This followed from the Geneva agreement, and a cease-fire and disengagement of forces which took place under U.N. supervision (April 1–November 16, 1989).

North Africa

Algeria

1976–1978. Tension with Morocco and Mauritania. Algeria's support of the Polisarios resulted in sporadic border skirmishes with Morocco and Mauritania (see p. 1543).

1988, October–1989, February. Unrest and Reform. Over 500 were killed in antigovernment rioting (October). Subsequently, President **Chadli Benjedid** was reelected for a third 5-year term, and a new, liberal constitution was adopted by popular vote (February). Significant political and economic reforms were effected.

1991, April. Algerian Nuclear Weapons Program Revealed. Speaking off the record, U.S. officials disclosed that Algeria, with Chinese assistance, was building a nuclear reactor for weapons production. This program was believed to be a counterpoise to the Libyan ballistic missile program.

Libya

1977, July 12–24. Border Conflict with Egypt. (See p. 1508.)

1981, August 19. U.S. Planes Down Libyan Planes. During U.S. Sixth Fleet naval exercises in the Gulf of Sidra, in the southern Mediterranean, two U.S. navy F-14s were attacked by two Libyan SU-22s. The Americans shot down both Libyan planes.

1981–1983. Libyan Intervention in Chad. (See p. 1539.)

1984, April 30. Great Britain Breaks Diplomatic Relations with Libya.

1986, January 8. U.S. Embargo. After linking Libya to a worldwide terrorist campaign, President Reagan issued an executive order freezing Libyan government assets in the U.S. and in U.S. banks, and prohibiting trade and travel by U.S. citizens to Libya.

1986, April 16. U.S. Warplanes Attack Libya. Launched in retaliation for the Libyan-sponsored terror-bombing of a West Berlin disco frequented by U.S. military personnel that killed 2 and injured 200 (April 5), the raid hit government and military targets at Tripoli and Benghazi, including Libyan leader Qaddafi's residence. Qaddafi was not harmed, but Libyan casualties included several civilians. The U.S. lost 1 F-111 fighter-bomber and 2 airmen.

1987, September. OAU-sponsored Cease-fire Halts Fighting between Libya and Chad. (See p. 1539.)

1988, October 3. End of Libya-Chad War. The two nations agreed to cooperate with OAU in determining the status of the mineral-rich Aouzou Strip in northwestern Chad, which Libya continued to occupy.

1989, January 4. Libyan Fighters Downed by U.S. Warplanes. U.S. Navy F-14 jets shot down 2 Libyan MiG-23 fighters that closed on them with "clear hostile intent" over the Mediterranean, 70 miles north of Tobruk. Meanwhile, U.S.–Libyan tensions escalated when the U.S. accused Libya of building a chemical weapons plant at Rabta, near Tripoli. Libya claimed that the plant was a pharmaceuticals facility.

1990, March 15. Purported Fire at Libyan Chemical Plant. Libya simulated a destructive fire at its Rabta chemical plant. The hoax was apparently designed to avert a U.S. air strike.

1990, December. Libya Backs Overthrow of Habré Regime in Chad. (See p. 1539.)

Morocco

1975, December 11. Morocco Moves into West Sahara. Moroccan troops occupied West Sahara (former Spanish colony of Rio de Oro). The Moroccan government laid claim to the northern ⅔ of the former colony. Morocco's claims were violently disputed by an indige-

nous movement, the Popular [Front] for the Liberation of Saqiat al-Hamra and Rio de Oro (Polisario). At the same time Mauritania occupied the southern portion of Sahara (see p. 1543).

1976–1984. Moroccan-Polisario War Continues. The Moroccan-Polisario conflict continued unabated. The Moroccans, despite a commitment of 90,000 troops, were unable to suppress the Polisario, while the Polisario were not able to establish effective rule over the region.

1986, August. King Hassan Abrogates Libyan-Moroccan Treaty of Unity. The 2-year-old treaty fell victim to ideological differences between the two countries' leaders.

1988–1991. Western Sahara Dispute. By 1986, Morocco had consolidated control over approximately ⅔ of the contested Western Sahara, and the fortunes of the Polisario Front were waning. Algerian support for Polisario effectively ended with the formation of the Arab Maghreb Union, a regional organization that included both Morocco and Algeria (February 1989). A year of relative quiet in the war zone was briefly disrupted (September–October 1989) by Polisario attacks launched from Mauritania. U.N.-sponsored peace talks between Morocco and the Polisario Front agreed that a referendum to determine the status of the Western Sahara would be held in 1991.

Tunisia

1985, October 1. Israeli Aircraft Bomb PLO Headquarters in Tunis. **(See p. 1501.)**

1987, November 7. Bourguiba Removed from Power. The 83-year–old leader, who had been president of Tunisia since 1956, was increasingly infirm and apparently senile. He was replaced by Premier **Zine el-Abidine Ben Ali,** a career army officer.

1988, April 16. Assassination of PLO Military Chief in Tunis. Khalil al-Wazir (Abu Jihad) and 3 others were gunned down by masked attackers. The attack was evidently carried out by Israeli intelligence and special operations forces. Al-Wazir was coordinator of the *Intifada* in the Israeli-occupied territories.

NORTH AMERICA

United States

1975, February–June. Middle East Peace Efforts. Secretary of State **Henry Kissinger** made a concentrated effort to work out a Sinai Peninsula troop disengagement scheme between Israel and Egypt while also trying to get the two countries and other Middle East nations to convene a general Middle East peace conference in Geneva. Kissinger made a number of trips to the Middle East and also met with Soviet Foreign Minister **Andrei Gromyko** in an effort to involve the Soviet Union in the planned Middle East Geneva Conference (February 16–17). It was largely through Kissinger's efforts that Israel and Egypt eventually worked out a Sinai Disengagement plan (see p. 1502).

1975, February 16–July 21. Mutual Balanced Force Reduction (MBFR) Talks. This was the beginning of an effort to achieve equivalent reductions of NATO and Warsaw Pact forces in Central Europe.

1975, May 12–14. *Mayaguez* Incident. **(See p. 1527.)**

1977–1979. U.S. Efforts Toward Middle East Peace. U.S. President **Jimmy Carter** devoted considerable attention to efforts to bring about peace in the Middle East. High points of these efforts were the Camp David Accords and the subsequent Egypt-Israel Peace Treaty–Treaty of Washington (see p. 1504).

1977, March 9. Planned U.S. Troop Withdrawal from Korea. President Carter announced that all U.S. ground troops (32,000) would be withdrawn from South Korea within 4 or 5 years. Soon after this, Army Chief of Staff General **Bernard W. Rogers** announced that

the U.S. had begun removing tactical missiles from South Korea and that South Koreans had begun manning some U.S. air defense missiles deployed in South Korea (April 14). The Carter announcement touched off a controversy involving Major General **John K. Singlaub,** chief of staff of U.S. forces in South Korea, who criticized Carter's plan. Singlaub was recalled to Washington and reassigned (May 27). The planned troop withdrawal began later in the year, but was canceled by President Carter after the Soviet Union invaded Afghanistan (see p. 1519).

1977, June 30. Production of the B-1 Bomber Stopped. President Carter canceled production plans for the proposed B-1 strategic bomber because he thought it was not cost-effective and because he and Secretary of Defense **Harold Brown** thought the cruise missile would be a more effective and cheaper deterrent.

1978, April 7. Carter Defers Production of the Neutron Bomb. Following months of urging NATO allies to declare that they would deploy enhanced radiation nuclear weapons ("neutron bomb"), President Carter announced he would not produce the controversial weapon. Proponents of the weapon argued that its radiation would be very effective in penetrating Soviet tanks and stopping a Soviet combined armed offensive on NATO's central front, while causing little damage to nearby structures. Critics questioned this and claimed that radiation from the weapon would threaten civilians in NATO countries. Later that same year (October 18), Carter partially reversed his decision on the neutron bomb and gave the go-ahead to manufacture some parts of the weapon.

1979, January 22. Carter Budgets MX Missile, Trident Submarine, and Cruise Missile. Under growing criticism of his defense policies from influential critics such as Senator Henry Jackson, President Carter requested $675.4 million for the MX (Missile Experimental) mobile ICBM. The proponents of adding the MX to the U.S. strategic arsenal argued that it would strengthen the strategic triad (land-based ICBMs, nuclear missile armed submarines, and long-range strategic bombers), which was seen as increasingly vulnerable because of qualitative improvements in the Soviet ICBM force (see p. 1480). In addition to the MX, President Carter requested funding for one submarine armed with Trident nuclear missiles and low-altitude cruise missiles and hardening of the silos for the existing ICBM force. Critics faulted Carter for denying navy requests for a new super-carrier and for deciding to phase out the large carrier force. Critics also scorned Carter for considering submarines as a possible basing mode for the MX because greater accuracy could be achieved from the land-based mode. Carter later decided upon the controversial horizontal "race-track" basing mode, in which the missiles would be shuttled from point to point along five oval concourses with a number of the underground silos always remaining vacant. This so-called "shell-game" approach was to complicate targeting for the Soviets.

1980, March 1. Development of a Rapid Deployment Force. The Rapid Deployment Task Force (RDTF) was to be a 100,000-man force composed of units from the Army and Marine Corps, whose mission was to respond and deploy quickly, with naval and air support, to crisis situations around the world.

1980, May 6. MX Basing Mode Changed. The Carter administration abandoned the controversial racetrack basing mode for a straight track basing mode because of the opposition of environmentalists and residents of Utah and Nevada. This did not silence opponents, and the problem of finding the proper basing mode was not resolved.

1980, August 5. Change in U.S. Plans for Nuclear Targeting. In Presidential Directive 59 (PD 59), the emphasis in targeting for the U.S. strategic nuclear force was changed from a countervalue to counterforce strategy. Countervalue calls for targeting industrial facilities and population centers, whereas counterforce is directed against Soviet nuclear missiles.

1980, August 20. Development of "Stealth" Bomber Revealed. The Defense Department revealed planned development of a new, long-

range strategic bomber capable of penetrating Soviet defenses by evading radar. The aircraft would not be operative until the 1990s. Republican presidential candidate Ronald Reagan charged that the Carter administration had compromised national security by a premature leak of sensitive information for political gain, and that the announcement was made to offset Reagan's criticism of cancellation of the B-1 bomber (September 4).

1981, August 10. U.S. Reversal on Neutron Bomb. U.S. Secretary of Defense **Caspar Weinberger** announced President Reagan's decision to proceed with full production of enhanced radiation weapons. They could be deployed as warheads for Lance missiles or as 8-inch artillery shells. Reagan, however, decided not to ship it to Europe until a later date, when the Allies would not object to its deployment or when it was needed in a crisis situation.

1981, October 2. New Strategic Missile Deployment Plan. President Reagan announced that he was reversing former President Carter's cancellation of the B-1 bomber. Production of 100 of these strategic bombers would serve to replace the aging B-52 force until the "Stealth" strategic bomber was operational in the 1990s. He also announced a new basing mode for the MX missile (see p. 1550). The first 36 of the 100 planned missiles would be deployed in existing superhardened silos (reinforced with concrete and steel). The decision on how to deploy the remaining missiles would be deferred until completion of further study. The Reagan program called for the development of improved Trident nuclear missile submarines with more accurate and more powerful missiles. Also the plan called for improved strategic defenses and for improved command, control, and communications systems.

1982, June 2–5. Conference on "Military Reform Movement." Widespread criticism of U.S. and NATO doctrine and strategy among

B-52 Bomber (*U.S. Air Force photo*)

members of Congress (who had established an informal "Reform Caucus") and many Defense intellectuals culminated in a 3-day conference at West Point, N.Y. The "Reformers" had been asserting for several years that U.S. doctrine, particularly in the army, was based upon a concept of "attrition warfare," in contrast to the ideas of the Reformers, who favored "maneuver warfare." The Reformers were also opposed to the "Forward Defense" concept in NATO. Although few opinions were changed among the participants, the ferment unquestionably influenced changes in doctrine in the U.S. Army, which appeared about this time, putting emphasis on maneuver, defense in depth, offensive warfare concepts, and long-range strikes by deep interdiction with weapons of increasing range, in a modified doctrinal concept which the army called "Air Land Battle."

1982–1984. U.S. Peacekeeping Contingent in Beirut. **(See p. 1475.)**

1982, November 27. "Dense Pack" Basing Planned for MX Missiles. This provided for basing the silos of the new ICBMs close together, on the assumption that the attacking Soviet missiles would be rendered ineffective because of the principle of "fratricide." Under this concept, incoming missiles would have to be targeted so close together that the explosion of the first missiles destroys the following missiles before they hit the counterforce target. Advocates of the plan said that only ¼ to ⅓ of the U.S. missiles would be destroyed by a Soviet first-strike attack; this was believed to be a rate of survivability so high as to deter a Soviet attack. The Joint Chiefs of Staff were divided on the dense pack basing mode. But public and Congressional opposition was vociferous. Congress voted to withhold funds (December 20).

1983, January 3. Bipartisan MX Basing Commission Appointed. In an attempt to depoliticize and resolve the MX basing mode controversy, President Reagan appointed a commission, headed by Lieutenant General **Brent Scowcroft,** U.S.A.F. Retired, to study and make recommendations regarding possible basing modes for the controversial missile.

1983, March 23. ABM Research and Development. In an address to Congress, derided by critics as the "Star Wars Speech," President Reagan announced that the United States would pursue the feasibility of perfecting an antiballistic missile (ABM) defense from outer space. Supporters applauded the speech, saying it was an important step in overcoming the mutual-assured destruction (MAD) mentality that had dominated strategic thinking from the late 1960s to the late 1970s. The project to implement this concept was termed the "Strategic Defense Initiative" (SDI).

1983, April 11. Scowcroft Commission Report. The commission recommended that 100 MX missiles with 10 warheads each be deployed in existing Minuteman silos in Wyoming and Nebraska. The MX would be supplemented by a large, but as yet undetermined, number of smaller single-warhead mobile missiles ("Midgetmen"). The commission also stressed "vigorous research and development of an antimissile defense system." President Reagan approved, finding this consistent with his "Star Wars" concept, and endorsed the commission's recommendations (April 19).

1983, May 3. United States Bishops' Pastoral Letter. The Catholic bishops of the U.S. published a pastoral letter in which they condemned any use of nuclear weapons as immoral, regardless of circumstances, and equally condemned the planned or threatened use of such weapons, thus also proscribing deterrence through threat of employing nuclear weapons.

1983. October 23. Suicide Attack on U.S. Peacekeeping Force in Beirut. **(See p. 1508.)**

1983. October 25–30. Invasion of Grenada. **(See p. 1557.)**

1983–1986. U.S. Army Light Divisions Created. The Reagan administration created or reorganized 4 regular army divisions on a new pattern. These included the 6th, 7th, and 25th Light Infantry and the 10th Mountain (Light Infantry) divisions. Later the National Guard's 29th Infantry Division was reorganized as a light division (1985–1986). Small by U.S. standards (10,500 personnel) and lightly armed

and equipped, they were highly mobile strategically, requiring fewer aircraft sorties to deploy than either airborne division.

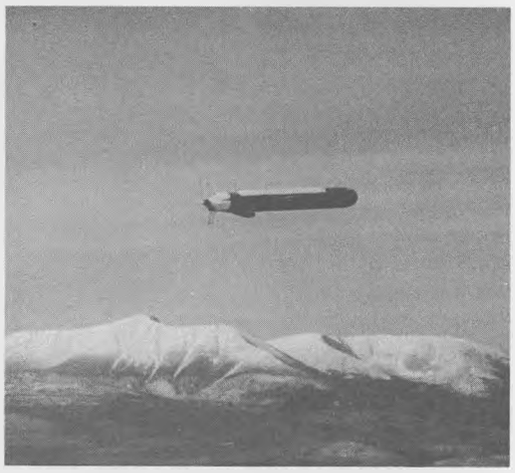
1984–1991. SDI Developments. Against stiff congressional opposition, the Reagan administration's so-called "Star Wars" program (see above) made only limited progress. Many critics maintained that the technical problems were too great to permit success, others attacked the high costs of research and development required, and still others stressed the questionable legality of SDI under the ABM provisions of SALT (see p. 1371). Some critics suggested the systems could be defeated by potential countermeasures, including ICBM decoy warheads, as well as SDI's ineffectiveness against aircraft, cruise missiles, and smuggled bombs. In the face of rising expenses and continuing opposition, administration goals dwindled from a concept of a complete shield against ICBM attack to a limited ABM system, akin in purpose to the abandoned "Safeguard" system of the late 1960s.

1986, October. Goldwater-Nichols Defense Reorganization Act. This wide-ranging defense legislation contained several important reforms. Among those were the designation of the Chairman of the Joint Chiefs of Staff as the senior military adviser to both the President and the Secretary of Defense, and the establishment of the position of Vice-Chairman of JCS and his designation as the second-ranking officer in the military hierarchy. This change meant a considerable increase in responsibility and authority for the Chairman and marked a major step in the evolution of the JCS from a collegial body to a true joint-service general staff with a single chief of staff. The full impact of this unique change in U.S. command structure became apparent during the crisis surrounding the Iraqi invasion of Kuwait and in the ensuing Kuwait War (August 1990–February 1991; see p. 1477).

1986, December–1987, May. Iran-*contra* Affair Revealed. As part of the Reagan administration's efforts to direct covert military support to the *contra* rebels in Central America, U.S. officials, including National Security Advisor **Robert C. McFarlane** and his assistants, Rear Admiral **John M. Poindexter** and Marine Lieutenant Colonel **Oliver L. North,** sold weapons to Iran (including advanced TOW antitank missiles, and spare parts for advanced weapons), funneling the proceeds to the *contras* to make up for congressional refusal to approve funds for military support of the *contras* (see p. 1561). These activities, dating from 1984–1986, were revealed in a series of newspaper reports (December 1986–February 1987). Despite congressional investigations, and criminal trials of McFarlane, Poindexter, and North, the level of President Reagan's or Vice President Bush's direct involvement remained unclear.

1987, December 8. INF Treaty. Signed by Presidents Reagan and Gorbachev in Washington, this agreement governed intermediate nuclear forces (INF), specifically the SS-20 (Soviet) and Tomahawk and Pershing II (U.S.-Nato) missile systems. It provided for the destruction of 1,752 U.S. missiles and 859 Soviet weapons. The actual destruction was carried out at plants in the U.S. and the U.S.S.R. under Soviet and American supervision. This represented the first major nuclear arms agreement since the SALT Treaty (1972).

1988, November 10. F-117A Stealth Fighter Revealed. After years of rumors and



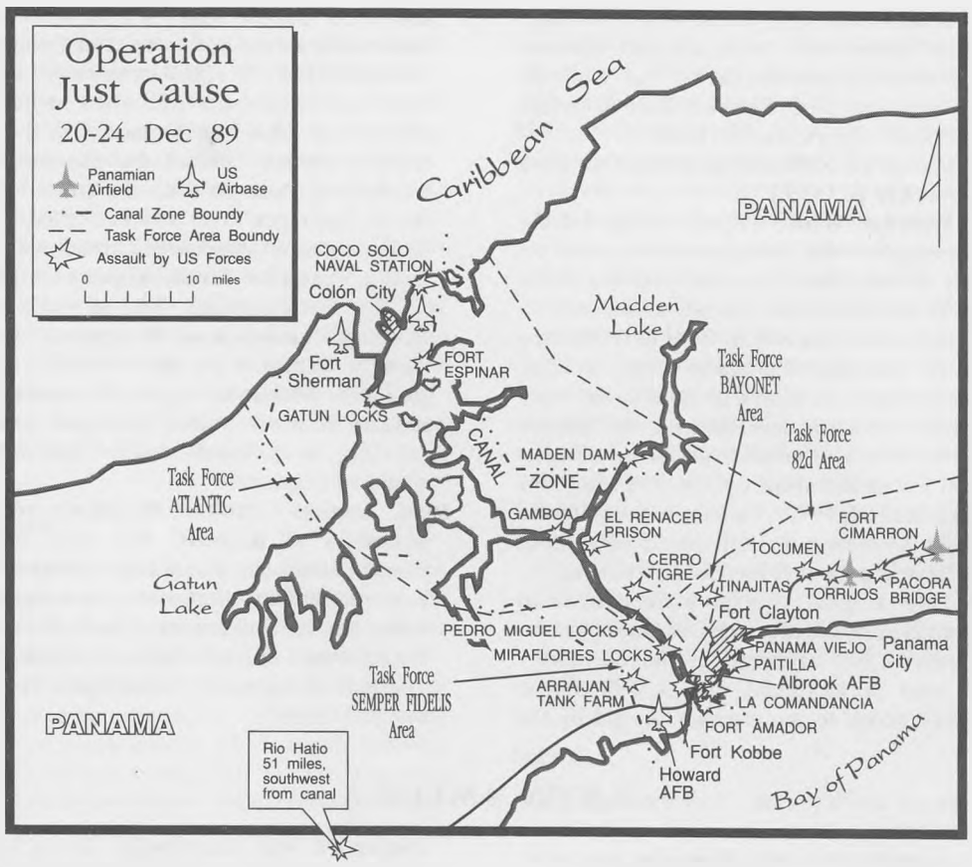
Tomahawk Missile in test flight
(*U.S. Navy photo*)

press speculations, the U.S. Air Force confirmed the existence of 52 Lockheed F-117A Stealth light strike fighter aircraft. The combat debut of the F-117A was in Panama (December 1989; see below), where its performance was equivocal. Its performance against Iraq (January–February 1991) was excellent, and did much to disrupt Iraqi command and control in the opening hours and days of the war.

1989, July 17. First Flight of the B-2 Stealth Bomber. Although scheduled for late autumn 1988, this was delayed for over 7 months. Like the F-117A, the Northrop B-2 used special materials and coatings coupled with a carefully designed shape so as to nearly eliminate radar cross-section, and so allow penetration of heavy enemy air defenses. The B-2's strategic role was to attack Soviet mobile missile sites in the event of general or nuclear war. The radically altered international political situation in 1988–1990, coupled with its extremely high cost, rendered the B-2 controversial in congressional budget deliberations.

1989, December 20–24. Operation JUST CAUSE in Panama. Following the killing of a U.S. Marine by Panama Defense Force soldiers, U.S. forces in the Canal Zone, and others flown directly from the U.S., invaded Panama to depose dictator Manuel Noriega. U.S. forces involved totaled 22,500 marine and army troops, from the 82nd Airborne, 7th Light Infantry, and 5th Mechanized Infantry divisions. U.S. forces swiftly occupied the capital and the countryside, overcoming some determined but scattered resistance. U.S. casualties amounted to 23 killed and 220 wounded; Panamanian military losses included at least 500 killed and wounded, but civilian losses may have been higher. Noriega took shelter in the Papal embassy, where he sheltered for several days be-

Refueling an F 114 Stealth Fighter (*U.S. Air Force photo*)



fore surrendering (January 3, 1990). The U.S. faced heavy criticism abroad, especially from other Latin American nations. A U.N. Security Council resolution condemning the invasion was vetoed by the U.S., France, and Great Britain.

1990, July 8. New Base Agreement with Greece. The U.S. agreed to close 2 bases near Athens but would maintain air and naval facilities at Souda Bay, Crete. Greece would also get credits to buy U.S. weaponry.

1990, August 2–1991, February 26. Response to Iraqi Invasion of Kuwait. **(See p. 1477.)**

CANADA

1975, May 9. NORAD Pact Renewed. The North American Air Defense treaty, originally signed in 1958, was renewed. The revised treaty gave Canada responsibility for its own air defense for the first time.

1977, July. Armed Forces Enlargement and Modernization Plan Announced. Scheduled to begin in 1978, the plan would add 4,700 men to the 78,000-member Canadian armed forces over a 5-year period, at a $100-million-a-year increase in the yearly budget.

The armed forces equipment was to be completely modernized. West German Leopard tanks would replace the Centurions, while 20 new destroyers were to be purchased to replace some of the aging Canadian ships.

1981, March 11. NORAD Extended for Five Years. **(See p. 1555.)**

1987. Defense White Paper. Rising defense costs, coupled with Canadian concerns over security for their Arctic domains, led to a major shift in defense policy. Canada abandoned its commitment to Norway in favor of reinforcing the 4th Mechanized Brigade Group at Lahr, West Germany, to form a division in the event of war. Political developments in Europe (1989–1990) led Canada to decide to reduce its 8,000 troops in Europe by 1,400 by late 1991 (September 21, 1990). Canada also announced that its 9-battalion division would be reduced to a large brigade task force of 5 battalions.

1990, July–August. Mohawk Resistance in Quebec. Mohawk tribesmen, angered by plans to convert a sacred tribal site at Oka (60 kilometers west of Montreal) into a golf course, blocked access to the grounds. A raid by the Surête du Quebec (Quebec provincial police) was met by armed Mohawks, and 1 policeman was killed (July 11). The government's use of force mobilized other Mohawks to back the militants at Oka, and Mohawks in the Kahnawake reserve blocked the Mercier Bridge connecting Montreal with the south bank of the St. Lawrence River. Quebec called for federal assistance (August 8), and 3,300 army troops blockaded Mohawk positions at Oka and the Mercier Bridge (August 9–23). Negotiations broke down, and Bourassa ordered the Army to dismantle the barricades (27 August). About 30 Mohawks at Oka, members of the militant Warriors' Society, retreated to a medical clinic on the nearby reserve, but later surrendered (September 26).

1990, August–October. Response to Iraqi Invasion of Kuwait. The Iraqi invasion trapped some 600 Canadians in Kuwait. The government sent 2 destroyers and a supply ship to the Persian Gulf as part of the U.N. blockade force (August 24), and later sent a squadron of 18 CF-18 jet fighters to Saudi Arabia from Germany (October).

LATIN AMERICA

Organization of American States

1976, October 6. Arbitration of Honduran-Salvadoran Border Disputes. Representatives of the two countries signed a 14-point agreement concerning disputed territory and submitted the dispute to OAS arbitration (see p. 1560).

1977, October 26. OAS Investigates Nicaragua–Costa Rica Border Dispute. A 3-member OAS team arrived in Managua to investigate charges of border violations stemming from attacks by Sandinista rebels across the Costa Rican border (see p. 1555).

Mexico

1979, January 26. Mexico Supports Guatemala against Insurgents. Mexican troops cooperated with Guatemalan troops in Chiapas, helping them to fight Guatemalan insurgents (see p. 1560).

1982, February 21. Lopez Proposes Central American Peace Plan. Warning against U.S. military intervention in the Central American region, Mexican President **José Lopez Portillo** proposed a plan for ending strife in Central America. This called for: The U.S. to end intervention in Nicaragua; a reduction in the size of Nicaraguan armed forces; and signing of a nonagression pact among Nicaragua, her Central American neighbors, and the U.S. (see Contadora Group, p. 1484).

Caribbean Region

Cuba

1975–1984. Armed Intervention Abroad and the Proliferation of Revolution. Cuba

intervened militarily in a number of countries throughout the period, most notably Angola 1975–1984 (see p. 1540), South Yemen 1978–1984 (see pp. 1513–1514), and Ethiopia 1977–1984 (see p. 1532). Fidel Castro's regime also helped Marxist-Leninist political movements in Grenada, Nicaragua and El Salvador (see pp. 1558–1563).

1983, October 25–30. Cuban Troops Defeated in Grenada. (See below.)

1988, December 27. Cuba Agrees to Withdraw Troops from Angola. After multilateral talks Cuba agreed to a phased withdrawal of its expeditionary force from Angola by July 1991. The force had grown to a peak strength of 50,000 men.

Grenada

1979, March 13. Coup d'État. Maurice Bishop seized power and established a socialist dictatorship on the Caribbean island, which had earlier been granted independence by Britain (February 7, 1973). Bishop sought close ties with Cuba and the Soviet Union. Construction began on a new airport, with a 2-mile runway, supposedly to accommodate tourists, also suitable for military planes. Cuban troops and construction workers as well as Soviet advisers arrived on the island.

1983, October 10–19. Coup d'État. Bishop was suspected by his Marxist colleagues of planning to shift allegiance from the Soviet Union to the United States. He was placed under arrest by his Deputy Prime Minister, **Bernard Coard,** who assumed power. Bishop was temporarily freed by his supporters, but he and many of them were killed by the new regime (October 19). Chaos reigned on the island.

1983, October 23. Caribbean Nations Appeal to U.S. for Help. Noting the chaos on the island, and that the new regime controlled armed forces larger than the combined military strength of all neighboring Caribbean states, the Eastern Caribbean States (a regional grouping including Jamaica, Dominica, Trinidad, Barbados, Tobago, and Belize) formally requested the U.S. to intervene militarily in Grenada to restore order. Since the U.S. government was concerned for the safety of some 1,000 Americans on the island (mostly medical students), President Reagan directed the Defense Department to intervene.

1983, October 25–30. Invasion of Grenada. Hastily planned Operation "Urgent Fury" provided for the landing on Grenada of some 6,000 U.S. troops (U.S. Marines, Army Rangers, and elements of the U.S. Army 82nd Airborne Division), plus token forces (about 500 troops) from the neighboring Caribbean states. Defending the island were approximately 1,000 troops of the Grenadian Army and about 600 Cuban combat engineers. The U.S. forces came ashore at three points in amphibious and airborne assaults. The resistance of the Grenadian troops ranged from slight to negligible; the Cubans fought fiercely. U.S. forces secured the island in about 60 hours. Total U.S. casualties: 18 killed, 83 wounded. Casualties of the defenders: 36 killed in action, 66 wounded in action, 655 captured. Subsequent criticisms of the performance of U.S. forces in this operation appeared in the press.

Haiti

1982, January 9–17. Revolution Thwarted. An attempt to overthrow the government of President **Jean-Claude Duvalier** (son of François Duvalier; see p. 1461) was suppressed.

1986, February 7. Downfall of Duvalier. "President for life" **Jean-Claude Duvalier** ("Baby Doc") fled to exile in France following 3 months of protests, ending 28 years of Duvalier family rule. He was succeeded by Lieutenant General **Henri Namphy,** chief of staff of the Haitian Army, who headed a National Council of Government. Popular reprisals eliminated many of the Tontons Macoutes ("bogeymen"), the dreaded, brutal security forces of Duvalier. Namphy was succeeded by **Leslie Manigat,** an academic, who was elected president (January 1988).

1988, June 19–20. Coup d'État. General Namphy overthrew Manigat, who was exiled; Namphy succeeded to the presidency.

1988, September 17. Coup d'État. Namphy

was ousted by a coup led by Lieutenant General **Prosper Avril.**

1988, September–1990, March. Sporadic Unrest. Avril's government was briefly threatened by 2 successive coup attempts by elite army units loyal to senior officers implicated in the drug trade (April 2 and April 5–10, 1989). The rebels were quickly subdued, and in the aftermath, the army was substantially reduced.

1990, March 12. Avril Resigns. Avril was toppled by continuing unrest. Interim governments gave way eventually to the elected government of leftist Roman Catholic priest, Reverend Jean-Bertrand Aristide (December 16, 1990).

Trinidad and Tobago

1990, July 27–August 1. Abortive Muslim Revolt. The Jamat al Muslimeen sect, led by Imam Yasin Abu Bakr, briefly held Prime Minister Arthur A. M. Robinson and 54 other hostages. Lacking popular support, the rebels surrendered to government forces.

Central America

Belize

1981, September 21. Independence from Great Britain. This came despite an ongoing territorial dispute with Guatemala. That dispute, moreover, bars Belize from entry into the Organization of American States (OAS) and protection under the Rio Non-Aggression Pact. Consequently, Britain maintains a 1,600-man garrison in Belize, based on a reinforced infantry battalion.

Costa Rica

1977, October 14–17. Border Dispute with Nicaragua. Costa Rica closed its borders and moved constabulary troops to the Nicaraguan border following the pursuit of Sandinista rebels by Nicaraguan National Guardsmen into Costa Rican territory. Both nations appealed to the OAS, accusing the other of border violations (see p. 1555).

El Salvador

1976. July. Border Clashes with Honduras. **(See p. 1560.)**

1979, January 20–March 20. Increase in Violence and Guerrilla Activity. Smoldering leftist unrest exploded into violent insurgency as a result of failure of the government to implement a satisfactory land redistribution program. An investigation by the Inter-American Commission of Human Rights resulted in charges that human rights violations were being committed by the El Salvadoran government against its political enemies.

1979, April–October. Continuing Violence. Efforts to suppress the insurgency by President **Carlos Romero** were unsuccessful. The new government of Nicaragua was suspected by the U.S. government of supporting the insurgency, as part of a policy of fomenting revolution and using force of arms to overturn all existing governments in Central America.

1979, October 15. Coup d'État. Disgruntled army officers staged a successful coup, overthrowing Romero.

1979, October–1980, December. Violence and Chaos. Efforts of the new junta to stabilize the country and satisfy the dissidents failed completely, and alienated much of the population. A land reform program was announced (February 11), disavowed (February 20), then a new program was announced (March 6).

1979, March 26. Assassination of Archbishop Romero. Outspoken and much-beloved Archbishop **Oscar Romero** was assassinated by a gang while saying Mass (March 24, 1980). Leftist rebels and right-wing extremists were suspects in the crime.

1980, May 2. Attempted Coup d'Ētat. The effort by former President Romero and disgruntled military officers failed.

1980, December 13. Duarte Named President. The junta appointed moderate Christian Democrat **José Napoleon Duarte** as presi-

dent, and directed him to reorganize the government.

1981–1991. Continuing Civil War. Despite massive financial and military assistance from the U.S., the Salvadoran Army was unable to suppress the insurgents, who were receiving comparable support from the U.S.S.R. and Cuba, via Nicaragua. Atrocities continued, committed not only by adherents of the leftist guerrillas but also by rightist extremists operating in so-called "death squads" believed to be composed of members of the armed forces, and operating under the direction of military officers. Among the victims were 7 Americans: 4 female missionaries (December 3, 1980), 2 labor leaders advising the Salvadoran government (January 2, 1981), and a naval officer military adviser (May 25, 1983).

Between 1982 and 1988, the death toll amounted to over 50,000, including many victims of the clandestine "death squads."

1982, March 28. Election. Despite a guerrilla boycott and active efforts to frighten people not to vote, there was a large turnout in an election that international observers considered very fair. Duarte's party won a 40 percent plurality of the vote, but a coalition of the right-wing parties, with a majority of right-wing representatives under the leadership of former National Guard officer **Roberto D'Aubuisson,** formed a government. D'Aubuisson, rumored to be one of those responsible for the death squads, failed, however, in his effort to be appointed president. Despite the election, violence and atrocities by both sides continued unabated.

1982, November 12–17. El Salvadoran Counteroffensive. The Salvadoran Army carried out a major counteroffensive in an effort to envelop the guerrilla strongholds and block their escape to Honduras. The Honduran Army also deployed along the common border of the two countries in order to apprehend elements of the guerrilla forces who escaped. The offensive was only partially successful.

1984, May 6. Duarte Elected President. Duarte defeated D'Aubuisson. He promised to seek reconciliation with leftist rebels, without compromising democratic institutions. He also promised to eliminate death squads.

1984, May 24. Military Men Convicted of Death Squad Murders. Largely as a result of pressure from the U.S., the Salvadoran government brought to trial 5 National Guardsmen suspected of murdering the 4 female missionaries (see above). The 5 were tried and convicted of murder.

1985, June 19. Terrorist Attack in San Salvador. FMLN gunmen attacked restaurants and cafés in the capital, killing 4 U.S. Marines, 2 U.S. businessmen, and 7 others; about 15 other people were wounded.

1985, September–October. Duarte's Daughter Kidnapped. President Duarte's daughter, Inés Guadalupe Duarte Duran, and a woman friend were kidnapped by FMLN guerrillas (September 10). After extensive negotiations, the government released 22 guerrillas and allowed another 96 to leave the country for treatment of wounds; in exchange, the FMLN freed 23 kidnapped mayors and some other officials, as well as Duarte Duran and her companion (October 24). President Duarte was criticized by ARENA (among others) for yielding too much to the FMLN.

1988, November 5. FMLN Rejects Cease-Fire. A unilateral government cease-fire was rejected by the FMLN. This occurred against the backdrop of Daniel Ortega's peace initiative (see p. 1563).

1989, November 11–December 15. FMLN Offensive in San Salvador. In a dramatic change in strategy, FMLN forces mounted a major offensive in the capital (November 11). During the first week of fighting, 6 Jesuit priests, their cook, and her daughter were found murdered (November 16); although blamed on right-wing "death squads," army involvement was also suspected (and later proved). Fighting within the capital continued for more than a month. Government forces used artillery and air strikes against FMLN positions in poorer neighborhoods, but there was also combat in wealthier suburbs before battered FMLN forces withdrew into the countryside (mid-December).

1989, May–1990, May. Continuing Death Squad Activities. U.N. human rights observers reported that 3,219 civilians were assassinated during this period.

1990, November–December. FMLN Down Aircraft. FMLN guerrillas, using SA-14 shoulder-launched antiaircraft missiles, downed 2 government aircraft (November 23 and December 4). As a result, the U.S. announced the resumption of military aid to Alfredo Cristiani's ARENA government (December 7). The aid had been suspended earlier (October).

Guatemala

1976–1991. Guerrilla Attacks. A political movement called the Guerrilla Army of the Poor (EGP—*E*jército *G*uerrillero de los *P*obres) staged a number of raids in various parts of the country, destroying farm equipment and on 1 occasion killing 2 land owners (November 13, 1976). They were especially active in the mountainous El Quiche region north of Guatemala City.

By the late 1980s, strenuous government efforts had substantially reduced guerrilla activities, but right- and left-wing "death squads" continued campaigns of assassination and terror.

1982, March 25. Coup d'Ètat. Brigadier General **Efrain Rios Montt** headed a successful coup. Combining religious fervor with ruthlessness, Rios Montt reduced unrest, but alienated the army.

1983, August 8. Rios Montt Overthrown in Coup. Military officers, headed by Defense Minister General **Oscar Humberto Mehia Vitores,** ousted Rios Montt after a brief struggle.

1985, December 8. Elections. In the first election of a civilian president in 15 years, Christian Democrat Marco Vinicio Cerezo Arevalo won the presidency. Cerezo took office on January 14, 1986, signaling the end of military rule.

1989, May 9. Attempted Coup. Nine civilians and 17 military officers were implicated in a plot to remove the defense and interior ministers. This threat to the government emerged against a backdrop of increasing violence. Estimates of the monthly death toll from political killings by both right- and left-wing "death squads" ranged from 40 to 200.

1990, December. U.S. Suspends Military Aid. Following the death of a U.S. citizen (June), the U.S. government suspended military aid to Guatemala.

Honduras

1976, July 14–22. Border Clashes with El Salvador. There were a number of armed clashes on the disputed border between El Salvador and Honduras.

1977. Staging Area for Sandinista Forays into Nicaragua. Honduras permitted Nicaraguan Sandinista immigrants of the National Liberation Front (NLF) to conduct operations in Nicaragua from bases in Honduras.

1981–1982. Strained Relations with Nicaragua. Anti-Sandinista guerrilla activity emanating from Honduras led to increased tensions between Nicaragua and Honduras. The Sandinista regime in Nicaragua alleged that the Honduran government had given aid to anti-Sandinista forces within Honduras. Nicaragua increased forces along the border. Honduras received increased military aid from the United States. By early 1982 there were 100 U.S. military advisers in Honduras. Relations deteriorated until both countries withdrew their ambassadors (April 4). Honduran President **Roberto Suazo Cordova,** concerned about Nicaraguan and Cuban subversion in his own country, asked for and received more aid from the U.S. (July 16).

1982, October 4. Latin American Peace Forum. Honduras participated in a peace forum with other South and Central American nations in an attempt to end hostilities in the region (see International Peacekeeping, p. 1483).

1982. November 12. Honduran Troops Aid El Salvadoran Counteroffensive. Honduras supported an El Salvadoran counteroffensive

against rebel strongholds by posting 2,000 troops along the Honduran-El Salvadoran border in an attempt to block the rebel passage into Honduras.

1983, August 5. U.S. Begins Honduras Military Maneuvers. The U.S. began large-scale military exercises in Honduras. These were to last as long as 8 months. Ostensible objectives included training Hondurans in counterinsurgency tactics, coordinating with Honduran troops, and training them in amphibious operations and in U.S. field artillery procedures and tactics. The obvious unstated objective was to impose caution on Nicaragua, particularly in its support of the insurgency in El Salvador.

1986, March 21–27. Nicaraguan Incursion. Nicaraguan army forces entered Honduras in pursuit of *contra* guerrillas (March 21–22). After some days of confused fighting (made more confusing by understandable reluctance among Honduran officials to admit presence of *contras* in Honduras), U.S. helicopters were used to insert Honduran troops across the Nicaraguans' main line of retreat, causing them to withdraw hurriedly (March 26–27).

1988, March 16–17. Border Clash with Nicaragua. Nicaraguan army troops entered Honduras to attack *contra* bases there, and clashed with Honduran army troops. The U.S. hurriedly sent 3,200 troops to Honduras, but the Nicaraguans withdrew soon after (March 28–31).

Nicaragua

1975–1976. Successful Counterinsurgency. The National Guard appeared to be winning their counterinsurgency war, and guerrilla activities subsided. However, harsh repressive measures aroused much resentment in the population.

1977. Somoza Under Fire. At home Somoza lost the support of the Catholic Church and much of the middle-class business population. In the international press, the Sandinistas' campaign of violence and terror was ignored, while the Carter administration's citation of Nicaragua as a violator of human rights was widely applauded.

1977, October. Border Dispute with Costa Rica. **(See p. 1558.)**

1978, January–September. Violence and Anarchy. Taking advantage of widespread public disobedience and largely effective strikes, the Sandinistas stepped up attacks and also were able to gain many new recruits, including foreigners from East Germany, the PLO, and Cuba.

1978, September 9. Full-Scale Sandinista Offensive Launched. The Sandinistas successfully attacked several large towns and cities. National Guard counteroffensives drove the rebels into the mountains with great difficulty. But the cost was enormous; many civilian casualties were suffered, further alienating the population. The Sandinistas continued their pressure.

1979, May 29–July 17. Sandinista Final Offensive. The rebels resumed the offensive, easily winning control of most of the cities and the countryside in a matter of weeks, and surrounded Managua (July 10). Certain of victory, they named a 5-man ruling junta (July 17). They rejected a belated U.S. request that they share power with more moderate elements of the opposition. At U.S. insistence, Somoza left Managua for Miami.

1979, July 19. Sandinistas Enter Managua in Triumph. The new regime was established with the entry of the Sandinistas into the capital city.

1979–1981. Sandinistas Consolidate Power. At first the government of the Sandinista *commandantes* encouraged a free press and free enterprise, but by late 1980 their policies had swung sharply to the left. They imposed press censorship, and postponed elections until 1985 at the earliest. They also forcibly relocated the Miskito Indians in the northeast, provoking armed resistance. Internationally, they shunned U.S. assistance and drew closer to Cuba and the Soviet Union. By late 1981, there were some 5,000 Cuban, Soviet, and PLO military and technical advisers in Nicaragua.

1981–1990. The *Contra* War. Encouraged by

the Reagan administration in the U.S., Nicaraguan exiles opposed to the Sandinista regime organized a guerrilla army in Honduras and Costa Rica, setting up base areas in both countries (1981–1982). These rebels were called the *contras,* and the Honduras-based forces were largely run by former members of Somoza's National Guard (a fact which did not endear them to most Nicaraguans). Their numbers rose to some 25,000, of whom perhaps 2,500 were active in Nicaragua at any one time (1985–1986). The *contras* enjoyed very modest popular support within Nicaragua, and did not really threaten the regime. Coupled with U.S. economic and diplomatic pressure, however, they eventually produced the end of the Sandinista dictatorship (1990).

1984, April 4–14. CIA "Covert" Mining of Corinto Harbor Revealed. In an operation blatantly contrary to international law, the CIA mounted an undercover effort to mine the port of Corinto. When this program was revealed (April 6–10) in the U.S. the public outcry produced a sharp reaction to government policies in Central America. Congress condemned the action (April 11).

1984, September 1. Two Americans Killed in Nicaragua. Two U.S. citizens, serving as freelance advisers to *contra* forces, were killed when their helicopter was shot down. They were members of Civilian Military Assistance (CMA), a private group with ties to the CIA.

1984, October 14–21. Scandal over CIA "Guerrilla Manual." Public revelation in the U.S. of a CIA manual on guerrilla tactics raised a furor with its suggestion that enemy (in this case, clearly meaning Sandinista) government officials be "neutralized." Some *contra* officials admitted that they had assassinated Sandinista officials.

1984, November 6–12. Soviet Arms Shipment Crisis. The U.S., claiming that a shipment of Soviet military stores bound for Nicaragua included MiG-21 fighters, warned it would not tolerate the delivery of such weapons. Observers noted no jets on the ship when it unloaded (November 7–10). The Sandinistas, ostensibly fearing a U.S. invasion, moved the country toward a war footing (November 12–13).

1985, April 4–29. *Contra* Funding Dispute. The U.S. Congress initially rebuffed the Reagan administration's requests for aid for the *contras,* despite government pleas not to abandon 15,000 "Freedom Fighters." However, Nicaraguan President Daniel Ortega's trip to Moscow (April 29) provoked reconsideration, and a *contra*-aid bill passed both houses of Congress the same day; additional aid was later approved (June 6–12). Continued popular and congressional opposition to U.S. support of the *contras* eventually induced some within the Reagan administration to resort to illegal and extra-constitutional means to maintain support of the *contras,* actions that produced the "Iran-*contra*" scandal (December 1986–May 1987; see p. 1553). Meanwhile, the U.S. suspended trade with Nicaragua (May 1, 1985).

1986, March 21–27. Incursion into Honduras. (See p. 1561.)

1986, October 5. Plane Downed Carrying Clandestine *Contra* Supplies. The Nicaraguans shot down a C-125K cargo plane and captured a U.S. passenger, **Eugene Hasenfus.** He had been involved in ferrying supplies to *contra* forces inside Nicaragua. While any official connection with the CIA remained murky, the Reagan administration admitted it had ignored the ban on aid to the *contras* (October 19). Hasenfus was tried and convicted by a "people's tribunal," but was later released (December 17, 1987).

1987, November–December. Peace Talks. After Ortega returned from a trip to Moscow (November 15), Nicaragua began a peace initiative. Peace talks broke down twice (December 4, 22) before they were abandoned.

1988, January. *Contra* Supply Planes Downed. An ostensibly private aircraft carrying supplies for the *contras* was shot down, and U.S. citizen **James Denby** captured (January 13). Another plane was downed (January 23), but Denby was freed (January 30).

1988, March 16–18. Nicaraguan Incursion into Honduras. (See above, p. 1561.)

1988, March and May. Abortive *Contra*-

Sandinista Negotiations. Efforts by the Sandinista government and the *contra* rebels to conclude a political settlement to the war were unsuccessful. A 60-day truce was signed (March 24), later extended for 30 days (May 26), but accompanying negotiations were unproductive.

1989, February 14. Tesoro Beach Accords. This regional peace settlement, involving the presidents of Costa Rica, El Salvador, Guatemala, Honduras, and Nicaragua, promised the disbandment of *contra* forces in return for an open election in Nicaragua, scheduled for February 1990. The Sandinistas initiated internal reforms indicating good-faith compliance with the accords (March–April).

1989, August 7. Tela (Honduras) Convention. This agreement among the participants in the Tesoro Beach accord regulated the disbandment of *contra* forces under the auspices of an international commission. Some *contras* refused to participate, but were eventually persuaded to accept the settlement.

1990, February 25. Elections. In a surprise upset, the opposition National Opposition Union (UNO), led by **Violetta Barrios de Chamorro,** won a wide majority in presidential, legislative, and local elections.

1990, October–December. *Contra* Unrest. *Contra* veterans, dissatisfied with the post-election settlement, briefly seized control of the town of Waslala (October). Fighting later broke out again (December), leaving 11 dead.

Panama

1977, September 7. Preliminary Draft Canal Treaties Signed. U.S. President Jimmy Carter and Panamanian leader General Omar Torrijos Herrera signed preliminary draft treaties for turning the administration and ownership of the Canal over to Panama. The treaties were ratified by a 2-to-1 majority in a Panamanian plebiscite (October 23).

1978, March 16, April 18. U.S. Senate Ratifies Panama Canal Treaties. The U.S. Senate ratified the two Panama Canal treaties. President Carter and General Torrijos signed the final draft of the treaties (June 16).

1981, August 1. Torrijos Killed in Plane Crash. His plane crashed in the jungle during an inspection tour.

1983, August. Noriega Becomes Commander of the National Guard. Manuel Antonio Noriega soon reorganized the Guard as the Panamanian Defense Forces (PDF), expanded its size, and increased its political power. He became virtual dictator of Panama.

1988, February 5. Noriega Indicted by U.S. In indictments unsealed in Miami, U.S. prosecutors indicted Noriega on drug-trafficking and money-laundering charges. He denied the accusations, and refused to resign despite public pressure. When President **Eric Arturo Delvalle** tried to dismiss him (February 25), he deposed Delvalle and assumed personal rule (February 26). The U.S. responded with heavy economic pressure and reinforced the Canal Zone garrison (March 1–11), but Noriega remained intransigent and cracked down sharply on internal dissent. He rejected a compromise that would have abandoned U.S. drug charges against him in exchange for his exile (May 25).

1989, May 7. Elections. The result of presidential elections, and accompanying hopes for renewed democracy in Panama, were dashed when Noriega nullified the results. International observers reported numerous instances of blatant fraud, and reports indicated that voters had favored the opposition ticket of **Guillermo Endara** by 3–1. Paramilitary forces, including Noriega's "Dignity battalions," broke up a peaceful protest with baseball bats and metal pipes, injuring hundreds, including both Endara and his running-mate, **Guillermo Ford** (May 10).

1989, October 3. Attempted Coup. Anti-Noriega officers led by Major **Moisés Giroldi Vega** mounted a coup against Noriega. Despite some U.S. support, the rebels were defeated, and 10 officers (including Giroldi) were killed. Noriega conducted a purge of the PDF afterward, and many officers were arrested or fled.

1989, December 20–24. Operation JUST CAUSE. **(See p. 1554.)**

South America

Argentina

1976, January 14. Argentina Places Ambassador to Britain on Indefinite Leave. As a protest against Britain's renewed interest in the Falkland Islands (called Malvinas Islands by Argentinians), the Argentinian government placed their ambassador on indefinite leave. The British reciprocated (January 19).

1976, February 4. Argentinian Ship Fires on British Research Ship. An Argentinian destroyer fired 2 rounds at the British scientific research ship *Shackleton* after requesting that the *Shackleton* be escorted to Tierra del Fuego. The *Shackleton* proceeded to Port Stanley with the Argentinian destroyer giving chase. Six miles from Port Stanley the Argentinian ship fired the 2 warning rounds.

1976, March 24–25. Military Coup d'État. President **Maria Estela "Isabel" Perón,** widow of Juan Perón, was ousted by the Armed Forces Chiefs of Staff, who immediately formed a ruling junta and imposed martial law on Argentina. The junta outlawed 5 extremist parties and initiated a counterinsurgency campaign against guerrilla and political extremists, who had terrorized Argentina for several years.

1976, March 25–1982, July 16. "The Dirty War." Argentina's military junta carried out a relatively successful counterinsurgency war against radical leftist guerrilla forces and political parties, most notably the People's Revolutionary Army (ERP), but in the process carried on a ruthless and indiscriminate campaign of counterterror, committing flagrant violations of the Argentinian citizenry's human rights. During this "Dirty War," as many as 20,000 to 25,000 people "disappeared." Following the defeat of Argentina by Britain in the Falkland Islands War (see p. 1471), the discredited military junta restored civil liberties (July 15) and political parties were allowed to function (July 16).

1977–1978, British and Argentinian Representatives Resume Falkland Negotiations. British and Argentinian diplomats met in New York and carried on negotiations about the future of the Falkland Islands (December 15–18). British and Argentinian negotiators again met in Lima, Peru, to discuss control of the Falkland Islands (February 15–17). The talks took on new meaning because of the discovery of large undersea deposits of oil in the vicinity of the islands.

1979, November 16. Argentina and Britain Resume Exchange of Ambassadors. The British and Argentinian governments sent new ambassadors to each other's capitals. Charge d'affaires had been the chief officers since Argentina placed its ambassador on indefinite leave (see above).

1981, December 21. Galtieri Takes Power. Lieutenant General **Leopoldo Galteieri** succeeded General **Roberto Eduardo Viola,** who had been compelled to retire by fellow officers after less than 6 months as president.

1982. January–June. Falklands Crisis and War. (See United Kingdom, p. 1471.)

1982, June 17. Galtieri Resigns. Only 3 days after the defeat in the Falklands (Malvinas), Galtieri resigned as both president and Army Chief of Staff. He was succeeded by Major General **Reynaldo Bignone** (July 1), and the navy and air force junta members resigned in protest over his appointment. The junta was reconstituted (September 10), and made progress toward return to civilian rule.

1983, October 30. Elections. In the first elections since Peron's return (1973), **Raul Alfonsin** of the Radical Civic Union was elected president. Alfonsin was inaugurated 6 weeks later (December 10).

1985, October 21. State of Siege. Alfonsin declared a 60-day state of siege during a legal dispute over the arrest of 12 suspected terrorists, including 2 active-duty military officers. Six suspects were released for lack of evidence (October 26).

1986, May–June. Military Unrest. There were several incidents of military unrest and local rebellion following the conviction of 3 former junta members for negligence in prosecution of the Falklands War (May 16).

1987, April 17–22. Army Rebellion. Soldiers

led by Lieutenant Colonel **Aldo Rico** seized the Infantry School at Campo de Mayo near Buenos Aires, protesting the treatment of an officer who had been cashiered for refusing to appear in court on human rights abuse charges (see "Dirty War," p. 1564). The rebellion was suppressed by loyal troops (April 19). There were extensive reports, after the event, that II Corps officers had failed to move promptly against the rebels.

1987, September 27–28. Army Rebellion. Soldiers of the 3rd Infantry Regiment seized their barracks near Buenos Aires, protesting the relief and replacement of Lieutenant Colonel **Dario Fernandez Merguer,** who had refused to act against the Campo de Mayo rebels (April). They surrendered after 4 hours (September 28).

1988, January 16–18. Army Rebellion. Aldo Rico, escaping arrest, took shelter at Monte Caseras with the 4th Infantry Regiment. The regiment's colonel led a mutiny by some 100 soldiers in Rico's support (January 16). Three loyal battalions, totaling 2,000 men, moved against Monte Caseras (January 17). After a sharp fight, they captured the rebel positions and the rebels surrendered (January 18).

1988, December 2–6. Army Rebellion. Led by Colonel **Mohamed Ali Seineldin,** some 500 rebellious soldiers captured the Campo de Mayo Infantry School (December 2). The rebels hoped to win amnesty for officers implicated in human-rights abuses under the military dictatorship of 1976–1983. The commander of a brigade at Cordoba refused to move against the rebels, although the commander insisted the brigade was not joining the mutiny. After some negotiations, Seineldin surrendered (December 6). In all, 855 personnel from 6 units had taken part.

1989, January 25. Attack on La Tablada Barracks. A force of civilian guerrillas attacked the La Tablada Barracks outside Buenos Aires. The armed forces responded swiftly and defeated the guerrillas in a sharp bloody action. Afterward, Alfonsin put a new military funding program before Congress.

1989, June 12. Alfonsin Announces Resignation. Effective June 30, Alfonsin would leave the presidency to President-elect **Carlos Saúl Menem** (elected May 14), ending his regime 6 months early (July 8). Contributing to his decision were food riots (May) and runaway inflation; prices had risen 309,907 percent since he took office (December 1983).

1990, December 3. Abortive Military Rebellion. Dissident army officers Rico and Seineldin, who had led previous rebellions, led several hundred soldiers in an effort to seize Army headquarters in Buenos Aires, and to install Seineldin as Army Chief of Staff. They were defeated by loyalist troops later that day. Casualties included 21 dead. The Menem government later announced it was seeking the death penalty for Rico and Senieldin (December 22).

Bolivia

1976. Guerrilla Activity. The National Liberation Army (ELN), founded by Che Guevara (see p. 1465), launched a number of raids throughout the year. They were allegedly aided by a Chilean group, the Revolutionary Left Movement.

1978, July 21. Military Annulment of Election Results. Bolivia's first election in 12 years (July 19) was annulled by the candidate of the ruling military government, Air Force General **Juan Pereda Asbun.**

1978, November 24. Military Coup d'État. After 4 months in power, General Pereda was overthrown by fellow junta member Army General **David Padilla Arancibia,** who promised new elections.

1979, July 1–August 6. Return to Civilian Rule. None of the 8 candidates for president achieved a majority in the promised election (July 1). Congress finally selected a provisional president, **Walter Guevara Arce,** bringing a temporary end to military rule.

1979, November 1. Military Coup d'État. Colonel **Alberto Natusch Busch** led a successful coup, overthrowing President Guevara and seizing the presidency. However, he was opposed by other military officers and was

forced to resign. The military leaders then selected **Lydia Gueiler Tejada** provisional president (November 16).

1980, July 17. Military Coup d'État. Following a presidential election in which no candidate received a majority, officers under General **Luis García Meza** seized power.

1981, January–August. Continued Civil and Military Unrest. A power struggle within the armed forces led to an armed revolt of senior cadets at the national military academy (March 17). A coup attempt ended in a military stalemate but forced the resignation of García (August 4). A 3-man military junta dominated by former president Natusch took power.

1987, August 28. State of Siege. In response to growing unrest sparked by economic problems, President **Jaime Paz Zamora** declared a 90-day state of siege.

Brazil

1985, January–March. Return of Civilian Rule. Twenty-one years of military rule ended with the election of **Tancredo de Almeida Nevez** (January 15). Nevez fell ill before his inauguration, and Vice President-elect **Jose Sarney** was sworn in (March 15). Sarney became president after Nevez died (April 21).

1990, October 5. Brazilian Nuclear Program Revealed. Minister of Science and Technology **Jose Goldenberg** revealed, in an interview with the *New York Times,* that the Brazilian military had undertaken a secret program to develop nuclear weapons. Following the discovery, President Collor had ordered the program shut down (September 19).

Chile

1973–1980. Junta Rule and Domestic Unrest. The military junta, under the leadership of Army General **Augusto Pinochet Ugarte,** established firm control over the country. There was, however, much internal unrest, and the Revolutionary Left Movement attempted to foment insurrections throughout the period.

1980, September 11. Voters Approve Pinochet's Transition Constitution and Continued Rule. By a better than two-thirds margin the voters approved General Pinochet's constitution, which included his accession to the presidency and the continuation of at least 8 more years of military rule. Pinochet formally assumed the office of president the following year (March 11, 1981).

1983–1984. Civil Unrest. Opposition to Pinochet's rule resulted in a number of riots and some leftist guerrilla activity in rural areas.

1987, July 2–3. Civilian Unrest. Following a general strike, widespread civilian unrest and clashes between protesters and security forces left 8 dead, including a 19-year-old student who was burned to death by security forces.

1987, September 7. Pinochet Survives Assassination Attempt. General Pinochet escaped unharmed from an assassination attempt on his motorcade by the Manuel Rodriguez Patriotic Front.

1988, October 5. Pinochet Loses Plebiscite. Chilean voters overwhelmingly rejected General Pinochet's proposal that he be allowed to continue his military regime. Pinochet publicly acknowledged the result with uncharacteristic grace (October 6). Presidential and congressional elections were scheduled for December.

1990, March 11. Aylwin Sworn in as President of Chile. Following his election (December 14, 1989), Christian Democrat **Patricio Aylwin Azócar** was sworn in as president, succeeding Pinochet, who had deposed the last elected Chilean president, Salvador Allende (1973; see p. 1465).

Colombia

1975–1978. Social Unrest and Insurgency. Colombia suffered from domestic unrest and several insurgency efforts against the government. One of the two major guerrilla movements, the Revolutionary Armed Forces (FARC), attempted to disrupt the national elections (February 26, 1978). Later that year FARC and the second leading revolutionary

group, National Liberation Army (ELN), joined forces (August 24).

1979, January 9–November 14. Successful Counterinsurgency Campaign. This effort resulted in the elimination of 2,000 guerrillas and enabled President **Julio Cesar Turbay Ayala** and Defense Minister General **Luis Carlos Camacho Leyva** to pacify the country.

1980–1991. Continuing Guerrilla Activity. Despite setbacks the Colombian insurgents continue to carry on low-level guerrilla activities.

1985, November 6–7. Guerrillas Seize the Palace of Justice. Guerrillas from the notorious M-19 group attacked and seized the Palace of Justice in Bogota (November 6). M-19 had recently broken a truce with the government, claiming that cease-fire promises had not been kept and that reforms were not forthcoming as agreed. The guerrillas took more than 300 people hostage in the palace. Police and army troops used dynamite to breach the palace walls, and stormed the building. The ensuing fire and the battle itself cost 95 lives, including those of 11 Supreme Court justices.

1988, January 25. Attorney General Assassinated. Attorney General **Carlos Mauro Hoyos** was kidnapped and murdered by terrorists in Bogota. The group of Medellín drug lords known as *los Extraditables* (the Extraditables) claimed responsibility. President **Virgilio Barco Vargas** responded by decreeing extended police powers of arrest and detention, and increased penalties for drug trafficking.

1989, August 18. Presidential Candidate Assassinated. Luis Carlos Galán, presidential candidate of the ruling Liberal Party and a strong supporter of a hard-line policy against the Medellín and Cali cocaine cartels, was killed by drug traffickers. This followed the government's crackdown on the drug trade, and in turn led to the declaration of a state of emergency, and the arrest of over 10,000 persons suspected of involvement in the drug trade.

1989, October 28–November 4. Drug Traffickers' Assassination Campaign. The drug lords attempted to maintain their operations and fight legal prosecution and extradition by a campaign of terror. Drug cartel gunmen killed a magistrate, a congressman, a left-wing politician, and 6 policemen in Bogota.

1990, April. Killings in Medellín. During this month, drug-related killings claimed an average of 50 lives per day.

1990, August 7. Drug Lords Proclaim Truce. Following the inauguration of President **César Gaviria Trujillo,** Medellín cartel leader **Pablo Escobar Gaviria** declared a unilateral truce. President Gaviria later offered traffickers immunity from extradition and reduced prison sentences if they surrendered to the authorities.

Ecuador

1975, September 1. Attempted Coup. Armed Forces Chief of Staff General **Raul Gonzalez Alvear** was defeated by troops loyal to President Guillermo Rodriguez Lara.

1976, January 11. Military Coup d'Ètat. The armed forces commanders ousted President Rodriguez in a bloodless coup.

1978, January 16–17. Border Incident with Peru. Brief hostilities broke out along the disputed Maranon River border in the Cordillera del Condor Mountains.

1981, January 28–February 2. Renewed Border Hostilities with Peru. The longstanding border dispute erupted into hostilities when Ecuadoran troops pushed 13 kilometers into Peruvian territory. In Washington the OAS helped negotiate a cease-fire (February 2).

1981, March 6. Truce with Peru. Both sides announced an "immediate peace" along the disputed border and agreed to mediation by the U.S., Chile, Brazil, and Argentina.

Paraguay

1975–1978. Low-Level Insurgency. Army units carried out counterinsurgency operations against Marxist-Leninist guerrillas, and police also conducted operations against leftist guerrillas in Asuncion.

1978, May 5. State of Siege Lifted in Three Departments. A state of siege, which had been present since 1947 in the departments of Itapua and Central and Alto Paraná, was lifted. Asunción, the capital, still remained under a state of siege because of the threats posed by Marxist-Leninist guerrillas.

1989, February 3. Coup Deposes Stroessner. General **Andrés Rodriquez** led a successful coup against longtime dictator Alfredo Stroessenr, who had ruled the country since 1954. Scores of people were killed, and Stroessner went into exile in Brazil. Rodriguez's promised free elections followed on May 1, and the Colorado party (PC) won a substantial victory.

Peru

c. 1978–1991. Communist Insurgency. This was the result of efforts by a self-proclaimed Maoist organization with overtones of Inca revivalism, *Sendero Luminoso* (Shining Path), based in the central Peruvian highlands, especially around Ayachuco. *Sendero Luminoso* guerrillas were disciplined and ruthless, and either won over (through promises of land reform) or cowed into submission a sizeable portion of Peru's rural highland population. Although their terrorist bombing campaign (1983) and other efforts to topple the government failed, government efforts to contain their activities met with scant success, and by late 1989 the guerrillas had killed or kidnapped some 15,000 people. In January–July 1990 alone, the guerrilla and counterinsurgency operations cost 1,952 lives, nearly as many as in all of 1989 (1,956). During the late 1980s, *Sendero Luminoso* made considerable headway in efforts to control the Upper Huallaga Valley, a center of coca production, and thereby gained considerable financial resources from "taxes" on coca growers. Government efforts to maintain order were further hampered by the smaller *Movimiento Revolucionario Tupac Amaru* (MRTA) guerrilla-terrorist group, ironically named after a leader of late 18th century Indian resistance to Spanish rule.

1975, August 29. Military Coup d'État. The commander of Peru's 5 military districts issued a joint communiqué removing President Velasco from office and proclaiming General **Francisco Morales Bermúdez Cerrutti** president.

1976, July 9. Attempted Coup d'État. Troops loyal to President Morales crushed a barracks rebellion.

1986, June 17–19. Prison Uprisings. Imprisoned members of *Sendero Luminoso* staged uprisings and took control of 3 prisons (June 17–18). At 2 of these the rebels had obtained arms and constructed fortifications and barricades, which were overcome only when government troops attacked with rocket and armored car support (June 18–19). Official reports (possibly understated) said 156 had died in the uprisings.

Surinam

1980, February 25. Military Coup d'État. Premier **Henck A. E. Arron** was ousted from power in a coup led by 2 army sergeants.

1980, August 13. Military Coup d'État. The military leadership removed President **Johan Ferrier,** who had survived the earlier coup that had ousted Premier Arron.

1982, February 5. Military Coup d'État. The military leadership ousted the civilian government and then imposed military rule.

1989, June 23. Government Truce with Surinamese Liberation Army (SLA). After years of desultory conflict, the government approved an agreement with SLA leader **Ronnie Brunswijk** on conditions for a truce. The SLA drew its support from so-called "Bush Negroes," descendants of escaped slaves who had fled into the interior. Although the truce was ratified by the National Assembly (July 21), the Army refused to accept it. Indian groups also opposed the agreement, fearing for their safety. The insurgency continued.

1990, June–September. Army Offensives. The Army invented a series of offensives against the SLA.

Uruguay

1976, June 12. Coup d'Etat. President **Juan Maria Bordaberry** was removed by the armed forces in a bloodless coup. Vice President **Alberto Demichelli** temporarily assumed the presidency.

1982, September 28. Military Government Lifts Ten-Year Ban on Political Parties. In preparation for November elections and the restoration of democracy, the government lifted a 10-year ban on political parties.

1985, March–1989, November. Transition to Civilian Rule. Following the military's successful suppression of the Matamoros guerrillas, and bowing to increasing public pressure to restore civilian rule, the ruling military junta supervised a 4-year transitional period.

1989, April 16. Referendum on Military Amnesty. After considerable public debate, a referendum was approved endorsing a law (passed in December 1986) granting amnesty to military personnel for human rights violations committed under military rule (1973–1985). This met the junta's requirement for completion of the transition period and a full return to civilian rule as a result of elections (November 26).

Venezuela

1975–1991. Continued Communist Insurgency. Government troops continued to combat low-level Communist insurgency.

1989, February 27–March 3. Unrest and Riots. Acting to satisfy International Monetary fund requirements, President Carlos Andrés Pérez announced oil and gasoline price increases (February 27). Riots broke out the same day all over the country, but were especially severe in Caracas. Andrés Pérez declared martial law (February 28), and announced wage increases (March 1). Unrest continued for several days until military and police forces were able to restore order. The government reported that 300 had died during the 5 days of riots.

Australasia/Oceania

Australia

1988. Defense White Paper. Pursuant to its first major reexamination of defense policy since shortly after World War II, the Australian government published its 1988 Defense White Paper. Primary among its issues were 3 principal considerations. First, major conventional war for Australia was judged unlikely, which consequently could safely reduce its defense establishment. Second, security requirements in the Indian Ocean basin demanded a major redeployment of naval forces from the east coast to the west, with major forces based at Perth. Finally, the potential for low-level military actions, including terrorism and potential guerrilla activity, required an increased commitment to defend Australia's thinly populated and vulnerable northeast regions. The White Paper called for greater airmobile capacity and reconnaissance forces to secure the northeastern coast.

New Zealand

1985, November 4. French Agents Sink Greenpeace Vessel in New Zealand. The *Rainbow Warrior*, owned and operated by the international ecology organization Greenpeace, was sunk in Auckland harbor by explosives planted on the vessel's hull. A photographer was killed in the attack, but most of the vessel's crew was ashore at the time and escaped injury. Revelation that the sabotage had been executed by French agents sparked a furor; *Rainbow Warrior* had previously attempted to block French nuclear tests in the Pacific. Although others had planted the charge, a New Zealand court convicted Major **Alain Mafart** and Captain **Dominique Prieur** of manslaughter, since they had directed the effort.

1986, June–August 11. United States Ends ANZUS Relationship with New Zealand. Following the election of a Labor government headed by **David Lange** (July 14, 1984), New

Zealand banned nuclear-armed or nuclear-powered ships from its ports as part of the Nuclear-free New Zealand Act (June 1986). Since this conflicted with U.S. policy "neither to confirm nor deny" the presence or absence of such weapons on its ships, New Zealand applied the law to U.S. vessels. The U.S. decided to suspend transfer of intelligence information to New Zealand, so long as the nuclear-free policy continued (August 11, 1986).

New Caledonia

1984. Ethnic Disputes. Tensions rose between the native Kanaks or Melanesians (45% of the people) and those of European (37%), Polynesian (12%), or Indonesian and Vietnamese descent (6%). The situation was worsened by the French Lemoine statute, which granted full self-government in territorial affairs. The Kanak Socialist National Liberation Front (FLNKS) blocked roads outside the capital of Noumea to isolate it from the countryside. Order was restored when authorities agreed to reformulate plans for independence to secure rights for the Kanaks. In subsequent elections, the FLNKS won a majority of seats outside of Noumea in elections for the territorial assembly (1985).

1986–1988. Continuing Unrest. Despite efforts by the French government to arrange compromise, both Europeans and the FLNKS opposed independence plans, and the FLNKS sponsored strikes, boycotts, demonstrations, and other protests.

1988, April 21–May 5. Hostage Crisis. Clashes between pro-independence Kanak guerrillas and French troops left 7 dead (April 21–May 4). The crisis came to a head when guerrillas kidnapped a number of Europeans, including several *gendarmes*, who were killed by the guerrillas. The surviving hostages were freed by a French commando raid on the guerrilla camp at Ouvéa, leaving 2 commandos and 19 Kanaks dead (May 5). Kanak claims of excessive zeal by the commandos in the so-called "Ouvéa Massacre" were supported by the French Defense Ministry, which admitted that some commandos had committed "acts contrary to duty" (May 30).

1989, May. FLNKS Leaders Assassinated. The compromise Matignon Accord (late 1988), which reduced tensions and promised a chance at peaceful settlement, left radical pro-independence members of the FLNKS deeply dissatisfied. The president and vice president of the FLNKS were assassinated by pro-independence radicals. Tensions eased following conciliatory gestures by the government and new elections for the territorial assembly (October).

Fiji

1987, May. Coup d'Etat. Following the election of an Indian-based government (April), elements of the Fijian army, led by Lieutenant Colonel **Sitiveni Rabuka,** deposed the government in a bloodless coup. This reflected deep-seated ethnic tensions, and native Fijian fears of an Indian-dominated government. Rabuka demanded special gurantees of Fijian rights and permanent control of the government. The Governor-General declared a state of emergency, and negotiated a compromise, dependent on new elections and revision of the constitution (August–September).

1987, September. Coup d'Etat. Frustrated by lack of political progress, Rabuka led another coup and reestablished direct military rule.

Kiribati

1979, July 12. Independence from Great Britain. This nation, with its capital at Bairiki on Tarawa, comprises 33 islands (20 inhabited) in the Gilbert Islands.

Solomon Islands

1978, July 7. Independence from Great Britain. This nation, with its capital at Honiara on Guadalcanal, comprises the double chains of

islands stretching southeast from Rabaul and New Britain.

Tuvalu

1979, October 1. Independence from Great Britain. This archipelago, with its capital at Fongafale on Funafuti, was formerly known as the Ellice Islands.

Vanuatu

1980, July 30. Independence from France and Britain. This nation, with its capital at Vila on Efate Island, comprises 13 major islands, all former British and French colonies.
